American Railroad Journal.

Saturday, October 4, 1862.

Stock and Money Market.

An unusual excitement has prevailed in the Stock Market during most of the week, and prices of nearly all kinds of securities have advanced. Gold is now 122½ having been as high as 124. The Custom House demand notes, as they become reduced in amount, keep pace with the price of gold. Our full quotations will show the advances in the stock and bond lists. For the first time in many years New York Central has risen above par.

We regard the movements of the past week as mainly the result of speculation. The exportation of specie, which continues to average about one million per week, does not warrant the great advance in gold. Neither do political events, which have recently taken a much more favorable turn than in the early part of September. The Government is ready to pay its interest accruing in gold, according to its promise, having readily obtained the amount required from deposits at four per cent., payable in the same.

Money is in good demand at from four to five per cent., the latter being the more current rate.

The following quotations of sales of State, City Railroad and other Securities are in addition to those given in the adjoining columns, and comprise most of the sales effected throughout the country during the past week:

New York—Illinois Coupon bonds, 1862, 99 and 99⅝; do., 1870, 99½ and 100; do., 1877, 100½; do., 1879, 100¼; Toledo and Wabash interest bonds, 87 and 90; Long Dock Co., 140; Ohio 6s, 1881, 108½; Illinois Canal bonds, 1860, 96¼; New York 6s, 1873, 117⅛; Detroit, Monroe and Toledo 1st mortgage, 94½ and 95½; Illinois Central Cancelled bond scrip, 40 and 41; New York City 6s, 1875, 104½; do., 1876, 105; U. S. 6s, 5-20 coupon, 102; Cumberland Coal, preferred, 8½, 9¼, 10½, 12¾, 13, and 15¾; New Jersey Zinc Co., 69 and 70; Canton Co., 17; Norwich and Worcester, 59, 59½, 61¼, and 62½; Indianapolis and Cincinnati, 35 and 36; Rome and Watertown, 80. The final quotations on Wednes-

day, where sales were not effected during the week were: N. Y. Central, 7s, 1863, 104½; Erie 1st mortgage, 115; Harlem 1st mortgage, 109; do., 3d mortgage, 90; Mich. Cent. S. F., 8 per cent 1882, 112; Goshen Air Line bonds 1868, 100; Terre Haute and Alton 2d mortgage 108; Lacross and Mil. L. G. Bonds, 26; Hannibal and St. Joseph 1st mortgage 45; Lackawanna and Western bonds, 106; Del. Lack. and Western 1st mort., ex div., 107; Galena and Chicago 2d mortgage, 104; Clev. and Pitts. 1st mort., 99¼; do., 2d mort., 95¼; do., 3d mort., 85.

Boston—Concord and Portsmouth, guaranteed, 112; Michigan Central 8s, 1869, 109; Vermont Central 1st mort., 20; Ogdensburg 1st mort., 84; do., 2d mort., 4; Worcester and Nashua 65; Concord, 62; Cheshire 17¼; Connecticut State 6s, 106¾; Massachusetts 6s, 1872, 114½; do., 1875, 114⅞; do., 1876, 115; do., 1888, 114½; Brookline City 7s, 1865, 105½; Boston City 5s, 1882, 103½; do., 1877, 103; Vermont and Mass. 6s, 101; Bath City 6s, 104; Malden and Melrose 6s, 75; Dorchester and Roxbury, 47½; South Side Mining Co., 62½; Huron, 9; Petherick, 3; Pontiac, 1½; Toltec, 2⅜; Boston Water Power Co., 36¾.

Philadelphia—Sunbury and Erie 7s 103½; Elmira 7s, 94; Camden and Amboy 6s, 1870, 100; Harrisburg 6s, 104; Pennsylvania Coupon 6s, 106; Susq. Canal 6s, 35; Long Island R. R. 6s, 100; Chesapeake and Del. Canal 25; do., 6s, 81; Philadelphia City 5s, 89; Schuylkill Nav. 5½; do., pref., 15½; do., 6s, 1872, 78½ and 90; do., 1882, 69 and 72; Susq. Canal 5¼; Little Schuylkill R. R., 20; West Philadelphia R. R., 54; Lehigh Valley, 60½, Girard College R. R., 25; Race and Vine, 10¼; Norristown, 49; Del. Div. Bonds, 97½; West Branch bonds, 93 and 95.

Baltimore—N. W. Va., 3d mortgage bonds 15; Balt. and Ohio Bonds scrip, 60; City Park Stock, 101; Canton Co., 15; Balt. and Ohio bonds, 1880, 92½.

Pennsylvania State Debt.

Governor Curtin has issued a proclamation announcing that during the year ending September 1, 1862, $262,801 67 of the public debt of Pennsylvania has been redeemed by the Commissioners of the Sinking Fund, as follows:

Four and one-half per cent. loan of the Commonwealth	$50,000.00
Five per cent loan of the Commonwealth	211,178.74
Interest certificates redeemed	370.41
Domestic creditors certificates	64.52
Relief notes canceled	1,183.00
Total	$262,801.67

Cleveland and Toledo Railroad Company.

The Cleveland and Toledo Co. has negotiated $800,000 of its sinking fund bonds at a commission of less than two and one-half per cent., and now gives notice of its readiness to buy the following bonds, with accured interest, viz.:

Junction Railroad second mortgage bonds, due Nov. 1, 1862.

Toledo, Norwalk and Cleveland first mortgage bonds, due Aug. 1, 1863.

Toledo, Norwalk and Cleveland second mortgage bonds due Aug. 1, 1862.

Cleveland and Toledo income bonds, due Sept. 1, 1863.

The privilege of exchanging these bonds has been stopped.

Interest and Dividends.

The interest on the bonds of the Brooklyn Central and Jamaica Railroad, due October 1, will be paid at the City Bank, Brooklyn.

The coupons due upon the bonds of the New York and New Haven Railroad will be paid upon presentation at the company offices, or at the Bank of the Republic.

The Panama Railroad Company has declared a dividend (the 22d) of 3 per cent out of the earnings of the road for the three months ending the 30th ult., and 1 per cent from steamers, sailing vessels, &c., payable 6th inst.

The Rutland (Vt.) Railroad Company is now paying coupons due years ago, and deducting the tax of three per cent.

The interest due October 1st on the Mortgage Bonds of the Syracuse, Binghamton and New York Railroad, will be paid at Continental Bank.

The coupons of the 1st Mortgage Bonds of the St. Louis, Alton, and Terre Haute Railroad due Oct. 1, will be paid at the Bank of North America, less the Government tax of 3 per cent.

The Philadelphia, Germantown and Norristown Railroad Company, have declared a dividend of 3 per cent payable Oct. 1.

China Trade and the Pacific Railroad.

The increase of foreign trade in China is one of the most remarkable developments of modern times. In spite of hostilities waged by France and England against that Empire, accompanied by repeated invasions of its territory in both South and North; in spite of a period of ten years' domestic strife, followed by the desolation of whole provinces and the sacking of populous cities; in spite of traditions and customs which are as old as the nation itself, the commerce between the "outside barbarians" and the Chinese increases at a truly wonderful rate. Earl Russell, in a recent Parlimentary speech justifying the Allied attack on the insurgents of the Southern provinces, gave the aggregate value of the annual commerce between Great Britain and China at more than thirty millions of pounds sterling. Nearly all this vast trade has been the creation of the last twenty years; and a large proportion of it the creation of the last three or four years. There is no reason to suppose that it has yet reached its natural limits.

A late number of the London Shipping and Mercantile Gazette gives the importations into the single port of Shanghae for 1861, at the annexed amounts:—

General imports	£10,403,972
Opium	3,742,621
Treasure	1,856,468
	£16,003,061

In the previous year the importations were valued at 18,326,430*l.*; but the falling off in them in 1861 was wholly in specie and opium—the general imports showing an improvement of 1,864,480*l.* chiefly in Manchester goods. The sixteen millions of imports realised a sum equal to 855,435*l.* for duties. The export Trade in 1861 stands thus:—

General exports	£8,706,942
Treasure	1,252,014
	$9,958,956

It follows, therefore, that the aggregate Trade of Shanghae in 1861 amounted to 25,962,017*l.*, and that the balance against the Port was 6,044,-105*l.* Exclusive of the vessels trading under British colors, no less than 447 ships were entered inwards from English Ports out of a total number employed of 1,630.

The value of imports into Foochoo, for the same period, was £1,061,855, and of exports, £1,169,076. Those of Swatow were respectively £1,061,164 and £506,482. The journal from which we quote estimates the whole volume of British trade with China at thirty four millions sterling.

A portion of the imports, of course, consists of *opium*, the naming of which stirs up odors of a not very pleasant character. Part also consists of munitions of war sold to both the belligerent parties, many of the "rebel" prisoners taken by the Allies having been found armed with English guns and supplied with English cartridges. But after all, the great body of the commerce carried on is legitimate in the proper sense of the term. On the Yang-tsi river, which is the Mississippi of Asia, the slow sailing native junk is fast being replaced by the swift and sure foreign steamboat, which brings down vast quantities of merchandize that must otherwise have perished. All accounts speak of this change as being a complete revolution. A Shanghae paper now before us states that there were at the date of its publication, (July 18), 171 square rigged sailing vessels and steamers in the upper and lower anchorages of that place, against only 77 merchant vessels at the same date in 1861. Last year there were only six steamers, now there are twenty six. Scarcely a week passes without some addition to the steam coasting and river fleets.

Another journal, noting the wonderful expansion of the China trade, refers with lively satisfaction to the establishment of a line of steamboats between Shanghae and San Francisco, and predicts from it the most auspicious results. Hitherto, it observes, the ports of Southern China have claimed and received a monopoly of the world's attention; but that day has gone by forever. The opening of the great rivers which penetrate the Central and Northern provinces of the Empire, must divert trade from Hong Kong and Canton to Shanghae and other ports higher up the coast.

We point to this truly remarkable development of commercial intercourse between China and the Old World, as another argument for building the "Union Pacific Railroad" with all the speed that is possible. The elements of success for that grand enterprise are fully commensurate with the magnitude of the work. They present themselves every day with increasing power and importunity. While our own mountains are ready to pour out their stores of the precious metals, from gold to "black diamonds," while the so-called desert gives promise of yet teeming with abundance, other countries stand ready to offer a volume of through business that will be perfectly amazing. New York, St. Louis, San Francisco, Honolulu, Shanghae are yet to be the great stepping stones over which half of the world's trade shall pass and repass. No doubt of it whatever. All the sanguine anticipations that have been entertained in by gone times are already surpassed by the results; figures at this moment have outstripped the popular imagination; fiction is beaten in the race by solid facts.

Bridging the Susquehanna.

The Philadelphia, Wilmington and Baltimore Railroad Company are now constructing a pier in the Susquehanna river, preparatory to the construction of a railroad bridge over that stream. Piles have been driven where the water has a depth of forty feet; and by the use of machinery they have been cut off even with the bottom of the river. In constructing the pier an iron caisson, made of boiler iron, the size of the pier, has been constructed and each section will be sunk by filling it with blocks of granite until the stone work is above the water. A frame work at the bottom of the river, around the edge of the piles, will keep the caisson in its place. It is expected that this pier will be completed before the cold weather sets in.

Railway Affairs in the Provinces.

In a late number of the JOURNAL we gave a statement of the Intercolonial Railway project up to the convention held at Quebec on the 10th ult. It is hardly necessary to explain that all the proceedings of that meeting must pass before the several Provincial Legislatures and the Imperial Parliament before they can become law. All that has been accomplished is to lay down an equitable basis for discussion by the parties concerned in the meantime, and legal action afterward.

According to a statement in the Quebec *Mercury* these preliminary arrangements are in substance as follows:—A joint commission is to be appointed by the three Provinces, consisting of two members from Canada, one from New Brunswick, one from Nova Scotia, and a fifth to be appointed by the other four members. This delegation will proceed to England to arrange with the Imperial government the terms of the loans and secure the most favorable concessions for services to be rendered. The survey will be deferred until the necessary legislation has been obtained. Any profits or losses, arising from working the line are to be distributed *pro rata* among them, according to their contributions to the work. Portions of the roads now owned by the governments of Nova Scotia and New Brunswick, entering into the new line, will be worked by the joint authority of the three provinces. Rates are to be uniform on all parts of it. Crown lands required for the line or for stations will be provided by each Province.

Most of the Canadian journals that have come under our notice speak in favor of the project. The Toronto *Globe* observes:

"If any of the Provinces is more interested than another in the work, unquestionably it is Canada. It is Canada which, in the winter season, occupies the position of a back country, borrowing access to the sea over foreign territory. Neither New Brunswick nor Nova Scotia is in this position. The former has the fine port of St. John, open at all times; the latter has the still finer port of Halifax, existing under equally favorable conditions. But Canada, Upper and Lower, has no single winter port. All its ports, including that of Gaspe, are closed by ice. We believe the want of suitable means of access to a British American port during winter is fully appreciated by the people of this country; and that they are prepared to do their share to supply it; a fact which, unless we be greatly mistaken, will be fully apparent next session of Parliament."

On the other hand, it is announced that Mr. Dorion, a member of the Canadian Administration, has resigned his seat, in consequence of the policy adopted by the government of that Province in reference to the Intercolonial Railway. His objection is the inability of Canada at this time to bear the expense. Desirable as such a work would be, he regards it as likely to prove unproductive, only sinking the Provincials still deeper in the mire. Some parties object to the scheme on the ground that the Home Government do nothing but *endorse* the bonds, thinking that, though it might enable them to be negotiated to better advantage, the service is not proportionate to the benefits which Great Britain must derive from the contemplated enterprise.

Exports of Breadstuffs.

We are indebted to Mr. Edward Bill for the annexed statistics of the annual export of breadstuffs for a series of years. The extent and progress of our foreign exports of breadstuffs is correctly shown in these tables, prepared with great care and from the most reliable sources. The shipments of the cereal year just closed are heavy, and in excess of any other season. To these may be added the exports to South America, West Indies, British Provinces, etc., which for the last year amounted to 1,135,014 bbls. flour, 158,192 bbls. corn meal, 12,087 bushels wheat, 502,756 bushels corn. The importance of so good a foreign demand, at fair remunerative prices, with the abundant crop of the last season, can hardly be estimated, particularly in the present unsettled state of the country. We are again blessed with a good crop and have much to spare.

Coney Island and Brooklyn City Railroad.

The financial condition of the Company August 1, 1862, was as follows:

Cost of construction	$484,845 18
Due by subscribers	4,690 00
Office furniture	274 84
Real estate (worth $100,000)	12,050 00
Running expenses for 3 months	5,670 67
Cash on hand	1,503 50
	$511,034 19
Capital stock ($500,000) issued	$491,700 00
Mortgage on real estate	7,000 00
Earnings of road 3 months to 1st Aug.	9,833 50
Bills payable	2,500 69
	$511,034 19

Earnings of road for the month of August, $7,050 85.

This road is now completed with 8½ miles of double track connecting Catharine and Fulton ferries, in the city of Brooklyn, and a single track of six miles more from the boundary line of the city to Coney Island with extensive depot buildings, stables, horses, cars, etc., new, and in complete order, affording the shortest route from New York to the Atlantic ocean.

The Banks and the Tax Law.

The following report of the Bank Tax Commitee was adopted at a meeting of Bank officers held on the 29th ult., at the Clearing House:

The undersigned, appointed a committee for the consideration of the United States Tax law, as affecting the business of banks, after a very careful consideration of the subject, beg leave to report the following schedule, approved by Governor Boutwell, the Commissioner of Internal Revenue, as the result of their labors. The committee take this opportunity of returning to that gentleman, on behalf of the associated banks of this city, their cordial thanks for the kind and courteous treatment received at his hands during their several interviews with him at Washington.

GEORGE S. COE,
A. E. SILLIMAN,
J. M. MORRISON, } Committee.
JOS. M. PRICE,
R. H. LOWRY,

NEW YORK, Sept. 29, 1862.

First—Agreements or contracts other than those hereinafter named, for each sheet or piece of paper upon which the same shall be written, five cents ..... .05

Second—Checks, drafts or orders, for the payment of money, payable at sight or on demand, for any sum exceeding $20, each two cents ..... .02

Third—Inland bills of exchange, drafts, checks, or others drawn upon places other than the place of issue, if payable at sight, or on demand, are subject to the same rate of tax, viz., two cents ..... .02

Fourth—Inland bills of exchange, drafts, or orders for the payment of money otherwise than at sight or on demand, and all promissory notes on demand or on time (excepting circulating bank notes).

Exceeding $20 and not exceed'g $100	.05
Exceeding $100 and not exceed'g $200	.10
Exceeding $200 and not exceed'g $350	.15
Exceeding $350 and not exceed'g $500	.20
Exceeding $500 and not exceed'g $750	.30
Exceeding $750 and not exceed'g $1,000	.40
Exceed'g $1,000 and not exc'd'g $1,500	.60
Exceed'g $1,500 and not exc'd'g $2,500	1.00
Exceed'g $2,500 and not exc'd'g $5,000	1.50

And for every additional $2,500, or part of $2,500 one dollar 1.00

Fifth—Foreign bills of exchange drawn out of, but payable in the United States, and all such bills, drawn in, but payable out of the United States "when drawn singly or otherwise than in a set of three

or more," and all letters of credit, pay the same rates of duty as in the preceding schedule.

Sixth—Bills of exchange drawn in, but payable out of the United States, "if drawn in a set of three or more," for every bill of each set, not exceeding $150, or its equivalent, three cents .... .03

Exceed'g $150, and not exc'd'g $250... .05
Exceed'g $250, and not exc'd'g $500... .10
Exceed'g $500, and not exc'd'g $1,000.. .20
Exceed'g $1,000, and not exc'd'g $1,500. .20
Exceed'g $1,500, and not exc'd'g $2,250. .30
Exceed'g $2,250, and not exc'd'g $3,500. .50
Exceed'g $3,500, and not exc'd'g $5,000. .70
Exceed'g $5,000, and not exc'd'g $7,500. 1.00
And for every additional $2,500, or part thereof .... .30

Seventh—Bonds of indemnity, fifty cents.. .50

Eighth—Certificates of stock in any incorporated company, each twenty-five cents... .25

Ninth—Certificates of deposit of bank, trust company, banker, or person acting as such, not exceeding $100, two cents .... .02
Exceeding $100, five cents .... .05

Tenth—Powers of Attorney—
For sale or transfer of stocks or bonds, or for the collection of dividends or interest, twenty-five cents .... .25
Or proxy for voting at an election, ten cts. .10
For collecting or receiving rents..... .... .25
General Powers—For all purposes other than those above specified.... ....$1.00

Note—General powers will not be valid for the specific objects above named, without the addition of the stamp required therefor.

Eleventh—Protests, each twenty-five cents. .25

Twelfth—Tax on all dividends, and on all sums added to surplus or contingent funds..3p c.

Thirteenth—Stamps issued for specific instruments cannot be used for any other (see sec. 96).

Fourteenth—The person using or affixing a stamp, must write thereupon the initials of his name, and the date when used (sec. 99).

The penalty for making, signing, or issuing any instrument, document, or paper of any kind, without the same having thereon a stamp to denote the duty, is fifty dollars, and such paper will be invalid and of no effect (sec. 95).

The certification of checks, already duly stamped, will require no additional stamp for such certification.

The stamp tax upon protests should be added to the expenses thereof.

All dividends or coupons, payable prior to or on September, 1, 1862, although paid after that day, are exempt from the operations of the law.

Checks dated, or payable abead, are subject to taxation as promissory notes.

Stamps are not required upon documents made prior to October 1, 1862, excepting upon foreign bills of exchange, which must be stamped on acceptance.

The committee recommend, as a simple and convenient method, that the three per cent tax required upon dividends and surplus profits be deducted by banks in gross from their net earnings before the declaration of dividends. Dividends then declared would be free from tax. The three per cent thus withheld must be paid to the United States within thirty days from the date on which such dividends are payable under penalty of five hundred dollars for default. (Sec. 82.)

Stamps must be affixed to all documents by the party issuing the same, before presentation at bank; and all documents issued by a bank must be stamped by it before delivery, as required by resolution unanimously passed at a meeting of bank officers September 15.

Stamps, in amounts of $50 and over, can be obtained of the Commissioner of Internal Revenue, as per schedule hereunto annexed, for which a commission of not exceeding five per cent, in stamps, will be allowed.

All checks of a bank upon itself, for payment of dividends or otherwise, and all written papers for facilitating the internal business of banks, are exempt from tax.

Orders to pay dividends are not powers of attorney; but, like drafts at sight, are subject to the stamp of two cents.

Bills of exchange, drawn in duplicate, must both be stamped.

Stamps may be cancelled by an instrument made for the purpose of impressing the initials of the bank or person thereon, to which the date must be added.

The omission to cancel the stamps on checks does not invalidate the checks, but subjects the maker to a fine of fifty dollars.

WASHINGTON, Sept. 25, 1862.

I have examined the foregoing memoranda, and I am of opinion that the specifications conform to the provisions of the Excise law in all essential particulars.

GEO. S. BOUTWELL,
Commissioner of Internal Revenue.

Until the government provide stamps, no penalty will be exacted for their omission.

OFFICE INTERNAL REVENUE, Sept. 17, 1862.

Revenue stamps may be ordered from this office in quantities to suit the purchasers. Orders should cover remittances of Treasury notes, or an original certificate of a United States Assistant Treasurer, or designated depository, of a deposit made for the purchase of stamps.

The following commission, payable in stamps, will be allowed:

On purchases of $50 or more, 2 per centum.
On purchases of $100 or more, 3 per centum.
On purchases of $500 or more, 4 per centum.
On purchases of $1,000 or more, 5 per centum.

In sending orders for stamps it should be remembered that every stamp expreses upon its face its kind as well as its denomination, and that each stamp must be used for the purpose thus specified, and for no other. For instance—Check stamps must be used for checks alone; contract stamps only on contracts, &c., &c. Revenue stamps will be ready for delivery on the 22d inst. Every correspondent is requested to give the State, as well as town and county, of his residence.

If not otherwise instructed the stamps will be transmitted by mail.

GEO. S. BOUTWELL, Commissioner.

The New York Canals.

The Albany *Evening Journal* states that the gross Canal Tolls for the fiscal year are $4,810,476, to which we may add $40,000 for miscellaneous receipts, and we have a round sum of $4,850,000 which is an increase over any former year of $1,150,000. The net revenue for the year, deducting the charges for collection, superintendence and repairs, will stand at $4,050,000, very nearly. The constitutional charges upon the Canal revenues the next fiscal year, which this sum will meet, amount to $3,366,242, and among these charges are $550,000 to the General Fund, to pay the interest on the General Fund Debt and for the support of Government; very nearly $1,400,000 to the Sinking Funds, to extinguish the principal of the Canal Debt, and the residue to pay the accruing interest for the year on the Canal Stock Debt. Aside from these charges, which are appropriated, there will be an overplus of about $630,000, to appropriate to such purposes as may be designated. In January and June last, the State paid off $2,100,000 of its canal debt, and will now pay more, not due, if the holders will take it at a fair premium.

In 1858 and 1859 the gross receipts of the Canals were only $3,931,084 51, and the net revenue, $1,955,326 64. At that time the average cost of maintenance was 51 per cent of the tolls, at present it is less than 17 per cent. Commercially speaking, the Mississippi river now runs through the lakes and empties into the Hudson at Albany.

Good News for Railroads.

A letter in a late number of the London *Times*, gives the following estimate of the results of the English harvest. The wheat crop will be from six to eight bushels per acre below an average, and of "a shrivelled and inferior quality." Barley will be ten bushels below the average, oats from four to six bushels, winter beans are a total failure, mangelwurzel two-thirds of a crop, Swedes half a crop, pastures "full of keep" but not of fattening quality, hay badly secured. It is therefore quite evident that our railroads will be overrun with business for the next six months.

Chicago Alton and St. Louis Railroad.

This road was sold at Joliet, Ill., on the 27th of September for the benefit of the first and second mortgages. It was bought by Samuel J. Tilden and L. H. Meyer, for the third mortgage bondholders, for the sum of $1,600,000. Under the reorganization of the road, the third mortgage bonds will represent the common stock; the second mortgage, preferred stock, and the first mortgage will remain as before. The whole amount of the three classes of bonds, with accrued interest, is about $6,500,000.

Grand Trunk Railway.

Mr. E. G. Taunton of Liverpool, has protested against the proceedings of the meeting of the Grand Trunk Railway Company in London on the 8th ult., on the grounds that forty days' time was not given by the notice, so as to make the meeting legal; also that the requisite majority (two thirds) in number and amount of the stock and bondholders has not been obtained, making the acceptance of the act invalid; further, he protests against Mr. Crawford's resolutions as being foreign to the purpose for which the meeting was convened. A Mr. Henry C. Chapman, has petitioned the Governor General of Canada to disallow the act as provided for in the 39th section.

Horse Railroads.

The laying of the track of the Worcester Horse R. R., is to be commenced early in October, and finished in November. The cars will probably be running by Dec. 1. Messrs. A. C. Morton of New York, and C. J. Anthony of Worcester, have contracted to build the road. Osgood Bradley has contracted to build nine cars, and Nathan Washburn to make the rails. The whole cost is estimated at $60,000, which has already been subscribed.

The cars of the street railroad in Washington, D. C., now run from the railway station, past the west capitol gateway, along Pennsylvania avenue to Georgetown. The rails to the Navy Yard are laid, and those on Seventh street soon will be, but great difficulty has been experienced in getting the cars from Philadelphia. Two of the cars used were built for exhibition at the World's Fair, and were to have been subsequently used on one of Train's London "tramways," but the opposition to those Yankee institutions rendered it useless to send them across the water.

New Telegraph Lines.

The cable intended to establish a direct telegraphic communication between Bavaria and Switzerland, was submerged 4th ult. The total length is 70,000 feet, and its weight 280 quintals. According to the soundings which have been made, the greatest depth of the Lake of Constance, where the cable will be placed, is 300 feet.

Accounts from St. Petersburgh state that at the end of last month there were in Russia 33,104 versts of electric telegraph (24,000 miles). The number of stations was 150. An additional

length of 10,335 versts is in course of being established.

In July last communication by electric telegraph could be made between London and Tumen, in Siberia, 4,039 miles distance. It is expected that the wires will be extended to Nikolaivski, on the Pacific, by the end of this year, and that there will be telegraphic communication with New York, *via* Siberia and California, by the end of 1863.

The Victoria (Australia) Telegraph Company have fifty offices and 1,516 miles of wire.

Railroad Earnings--Monthly.

The following statement shows the business of the Philadelphia and Reading Railroad Company for August, 1862, compared with that of 1861:

The earnings of the St. Louis, Alton and Chicago Railroad for the 3d week in September, 1862,

were	$32,090 47
Do., 1861	24,639 99
Increase	$7,450 48

Albany, West Troy and Cohoes Horse R. R.

AN ACT to authorize the Watervliet Turnpike Company to construct and maintain a railroad on their present road and to extend the same into and through the villages of West Troy and Cohoes and the town of Watervliet and the City of Albany, to increase the capital stock and to alter their corporate name, Passed April 15, 1862—three-fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

SEC. 1. The Watervliet Turnpike Company, in addition to their present rights, powers, franchises and privileges are also hereby authorized and permitted to construct and maintain one or more railroad tracks and ways, with all the necessary turnouts, branches and switches, upon the bed, or* one or both sides of their present turnpike road. And are also authorized, with the consent of the board of trustees of the village of West Troy, to extend, construct and maintain said railroad track or ways, from the northernly termination of said turnpike road, or any other more convenient point on said turnpike, on and through Broad street or any of the other streets in said village to some convenient point at or near the bridge across the west sprout of the Mohawk river, and to construct and maintain a branch railroad southerly through Broad street and any other street in said village; and also to construct and maintain the same, and diverging branch or branches thereof by any eligible and convenient route to the village of Cohoes, and also to construct and maintain such railroad or ways with necessary branches, switches and turnouts in and through any of the streets or highways or alleys in the village of Cohoes, on first obtaining the consent of the trustees of said village of Cohoes to the construction thereof, within the corporate limits of said village; and are also empowered and authorized to extend their present turnpike road to the northerly line of the city of Albany, and to construct and maintain hereon one or more railroad tracks or ways; and are also hereby authorized, with the consent and with such restrictions as may be deemed proper by the common council of the city of Albany, to extend and maintain such railroad track or tracks and ways from the southerly termination of said turnpike road, in and through Broadway, in said city to South Ferry street, by a single or double track where the carriage-way of said Broadway is of the width of forty-five feet and over, and by a single track where said carriage way is less than forty-five feet; and the said company are hereby required in winter to remove the snow from the surface of said carriage way down to within one foot of the pavement where the width thereof will admit of it, where a double track is laid for a space of twenty feet in width on each side of said track from the outside rail, and where a single track is laid and the carriage-way is less than thirty-five feet wide, for the space of fifteen feet in width on each side of said track from the rail; provided always that if said company construct said railroad through Broadway, in the city of Albany, they shall extend and maintain a branch therefrom, through North Ferry street, to and through the Lumber District to the north bounds thereof, for a distance not exceeding in all one mile from their main road, and they are hereby authorized so to do: also to use any existing bridge or bridges across the Erie and Champlain canal for the purpose of constructing, maintaining and operating thereon such railroad tracks or ways, and to erect and maintain new and additional bridges for such purposes: provided however that the consent of the canal board shall be obtained thereto, and subject to such conditions and restrictions as the canal board shall from time to time impose: provided, always, that such new bridges shall not interfere with the use or navigation of the Erie or Champlain canals, and shall be constructed in a manner to be approved by the canal board.

SEC. 2. The track or tracks of said railroad or way, and all the branches, turnouts and switches thereof, shall be constructed with the most approved rail, and that part thereof which shall be constructed in, through or upon any of the public and paved street or streets in the city of Albany or the village of West Troy, or the village of Cohoes, shall be constructed and maintained flush with the surface of such street or streets, as they now are or may be from time to time established or altered, and the said company shall keep the surface of every such street inside the rail and for two feet outside thereof, at all times in good and proper condition and repair; and said railroad tracks or ways shall be so constructed and used as to leave on each side thereof a portion of the carriage way sufficient for the safe and convenient passage of carriages going in one direction and so as not to occupy more than half of the width of the present turnpike road or of the carriage way of any of the streets in the city of Albany or the villages of West Troy and Cohoes, through which the same may be constructed, and so as not unnecessarily to impair the public use of the remaining portion of the turnpike road and such street or streets by causing or permitting snow or dirt, taken from the said tracks or ways, to be placed thereon, or in any other manner, and in case said company neglect to keep the surface of the portion of any part of said Broadway, in the city of Albany, used by them, in good condition or repair, as hereinbefore provided, or cause or permit snow or dirt from the same to be placed on the remaining portion of said street, as above referred to, or otherwise obstruct said remaining portion, or neglect to remove therefrom surplus snow above one foot in depth, in the cases above herein provided, they shall be liable to the owner or occupant of the property on the line of said street opposite which any of the above grievances exist or have been done or permitted in the penalty of fifteen dollars, to be recovered by an action at law, before any Justice of the Peace, on one day's notice being given to said company, and said suit may be commenced by the service of a summons, on notice as aforesaid being given, on any director of said company.

SEC. 3. It shall be lawful for said company, in constructing and operating such railroad track or ways, to construct, operate and run the same over and across the track of any existing highway or turnpike road, or the track and rails of any existing railroad company, but said company shall construct, maintain and keep every such crossing in a proper, safe, and sufficient condition and repair, so as to allow at all times the ready, safe and free passage of cars, and other vehicles, on and across the same, without hindrances or delay, nor shall such company cross or run over the track of the New York Central Railroad Company, unless on terms to be agreed upon between the two companies, and in case of disagreement between them, such terms shall be settled and determined on due notice to both parties, by the Supreme Court of the Third District at special term.

SEC. 4. The said turnpike company are hereby authorized to take transport and carry property and persons upon the said railroad track or tracks, for compensation, by the power of horses, animals, or any mechanical or other power, or the combination of them, which the said company may choose to employ, except the force of steam, and may charge and collect from each and every person so carried, a fare not to exceed for any distance not exceeding two miles, five cents, and for any excess over two miles at the rate of two cents per mile for such excess; and the board of directors of said company may regulate the time and manner in which property and passengers shall be transported and carried thereon; and may also, from time to time, fix, regulate, and establish the rates of charges and compensation to be paid and collected for the transportation of property and merchandize on its railroad, and may alter or modify the same at pleasure. But said company shall not, on Sunday, run their cars more than once an hour, to six o'clock P. M., and half hourly after six o'clock P. M. from each end of their road, for the transportation of passengers, and their ordinary baggage, or for any other purpose, and nothing in this act shall authorize said company to run the freight cars of any other railroad upon their track through the city of Albany; nor shall said company carry on said track freight to or from any other railroad on which steam is used as a propelling power.

SEC. 5. For the purpose of defraying the cost and expenses of constructing and equipping and putting in full and complete operation the aforesaid railroad track and ways, with the branches, turnouts, switches and other necessary fixtures and appurtenances as above authorized, the said company may and they are hereby authorized to increase their capital stock, not exceeding one hundred and fifty thousand dollars. The amount of such increase of capital stock shall be determined by a resolution of board of directors of said company, within ninety days after the final passage of this act; such increase of the capital stock shall be divided into shares of one hundred dollars each, and shall be considered personal property, and shall be assignable and transferable on the books of the company, in the same manner and as now authorized in relation to the present capital stock.

SEC. 6. Gilbert C. Davidson, Henry A. Brigham' Archibald A. Dunlop, James D. Wasson, Charles Van Benthuysen, James Roy, Charles B. Lansing, Joseph Badgley and Cornelius W. Armstrong, are hereby appointed commissioners, who shall, on or before the first day of January, eighteen hundred and sixty-three, meet at some suitable place in the village of West Troy, and also in the city of Albany, which they or a majority of them shall designate, to open books, and receive subscriptions to such increase of capital stock of said company. Public notice of the time and place of every such meeting for such purpose, shall be given for at least six days previous to the same, in at least one newspaper printed in the village of West Troy, and one other newspaper printed in the city of Albany; the books when opened by the commissioners shall remain open from nine o'clock in the forenoon until five o'clock in the afternoon of the day, for not exceeding three successive days, so that all persons may have a fair opportunity of becoming subscribers, and the sum of ten dollars on each share subscribed for, shall be paid by every subscriber, in current money, to the commissioners in attendance at the time of making such subscription, and no subscription shall be complete or valid without such payment at the time when the subscription is made. If more than the amount of the increase of the capital stock, as fixed, shall have been subscribed, then the commissioners shall proceed to distribute and apportion the same among the subscribers thereof, in such a manner as they shall deem most advantageous to the company.

SEC. 7. The said commissioners, after closing the books of subscriptions, provided at least eighty thousand dollars of such additional stock shall have been subscribed for, and ten per cent shall have been paid thereon as required in the previous section, shall then give six days' public notice in at least one newspaper printed in the city of Albany, and also in one of the newspapers printed in the village of West Troy, for a meeting of the owners of the present capital stock, and also of the subscribers to the additional stock, to choose nine directors and three inspectors of election. The said commissioners, or such of them as shall attend, shall preside at such election, receive and canvas the votes, and declare and certify the result. Every stockholder and subscriber for the additional stock, who may attend in person or by proxy, shall be entitled to one vote in each share held or subscribed for by him at the time of giving notice of such election. The directors and inspectors shall be chosen by ballot, and shall hold their office until the next annual election, as provided for by the present charter of the company; and the term of office of the directors and inspectors of said company who shall be in office at the time of such election, shall expire on the day of such election. If any vacancy in the office of directors or inspectors chosen at such election shall happen by death or resignation, such vacancy may be filled by the remaining directors until the next annual election.

SEC. 8. The said commissioners shall also, before opening the books for subscription to such additional stock, ascertain and appraise the fair value per share of the present capital stock of the said company on the amount actually paid in, and shall certify such valuation to the board of directors elected as prescribed in the last section, and shall also, without delay, deliver over to the said board of directors the subscription books and moneys received by them from the subscribers to the additional stock of the company; and the said board of directors and their successors in office may from time to time receive additional subscriptions for any part of such additional stock remaining unsubscribed for, or which may have been forfeited by reason of non-payment of the same as required by the board of directors, and without giving any new notice, and upon such terms and conditions, not inconsistent with the provisions of this act, which the board of directors may direct.

SEC. 9. The said commissioners, before performing any of the duties imposed on them by this act, shall be severally sworn and qualified before some officer authorized to administer oaths, that they will faithfully and impartially execute and discharge all the duties imposed on and required of them under this act.

SEC. 10. The directors of said company may demand and require from the several subscribers to the additional stock of the company, payment of the stock by them subscribed for, at such time and place and in such proportions as they may deem proper, under the penalty of forfeiture of their respective shares, and all previous payments thereon, and may also sue for and recover the balance due on such subscriptions, but no subscriber for or owner of such additional stock shall be required to pay, in the aggregate, a greater sum on each share of stock subscribed for or owned by him, than the appraised valuation per share of the present stock, on the amount paid in, as the same shall be appraised and certified by the commissioners in the manner aforesaid.

SEC. 11. The said company in addition to the powers, authority and privileges granted and conferred by this act, shall have the power and authority mentioned and defined in and by the first, second, third, fifth, sixth, eighth, ninth and tenth subdivisions of the twenty-eight section, and in the thirty-fifth, forty-second and forty-fifth sections of the act entitled "An act to authorize the formation of railroad corporations, and to regulate the same," passed April second eighteen hundred and fifty; but nothing in this section contained shall authorize the said company to use steam as a propelling power on said road.

SEC. 12. Unless said company shall construct and put in operation at least six continuous miles of said railroad track, with the necessary turnouts, branches and switches, within three years after the passage of this act, this act shall cease and be of no effect.

SEC. 13. The corporate name of the said company shall hereafter be the Watervliet Turnpike and Railroad Company.

SEC. 14. This act shall take effect immediately.

* So in the original.

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 362, Post Office, New York.** 38tf

OTTO AHLSTROM,

MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

VENTILATION.

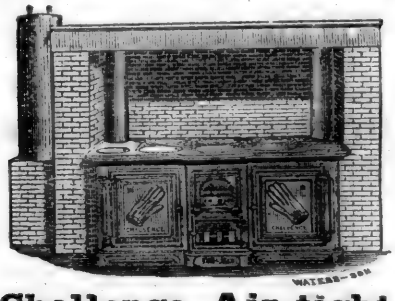
THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS,** etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.

Address **HENRY RUTTAN,**
Coburg, Canada.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.



The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.

3m21 **Nos. 70 and 71 West st., New York.**

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light

SUMMER AND WINTER

PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,

SANFORD'S

MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

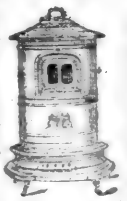
Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.



UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.

These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.
The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.
They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.
Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.
For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

☞ Letters, Communications, Pamphlets, etc., intended for this JOURNAL, should be addressed to the *Editor and Proprietor*, JOHN H. SCHULTZ.

NOTICE.—Inventors and scientific men wishing to introduce valuable improvements to the notice of the public, particularly such as relate to Railroads, Locomotives and Steam Navigation, will henceforward receive due attention from this JOURNAL, on the receipt of communications containing proper descriptions of those improvements; a gentleman competent to the task being connected with the proprietor for this purpose.

Locomotives for Sale.

GEO. T. M. DAVIS, Esq., 47 Exchange Place, this city, has for sale one 30, one 20, and one 10 ton locomotives, all of the ordinary gauge, and now ready for delivery. The prices are $11,500, $9,000, and $6,000 respectively. See his advertisement.

Metropolitan (Boston) Railroad.

The receipts of this road during the month of September for five years have been as follows:

September,	1858	$23,477 59
"	1859	26,006 60
"	1860	31,421 28
"	1861	22,757 75
"	1862	25,653 48

Good Politicians and Poor Statesmen.—A Great Mistake Corrected.

Those persons who make politics their trade, and seek to rise on the gusts of passion they themselves create, must be expected to use all the fuel they can pick up to raise the flame and rarify the atmosphere on which they are to ascend. Some of us remember, and all of us know, that when the great Clinton proposed the construction of the Erie Canal, the politicians of the hour took hold of it as a material of party, and a powerful opposition was got up against a measure which is the glory, as it has been the salvation of the State of New York. Look at its magnificent income the present year of about five millions of dollars, enough to wipe out all the immediate claims upon its fund, and leaving six hundred thousand dollars for the use of the State. Had we listened to the arguments of its opponents, it would never have been made. No friend, no advocate of internal improvements therefore need ever fear the opposition of any mere politician. It is his trade to make the most of his opportunity.

We confess, therefore, we are not surprised at the remarks of Mr. James Brooks of the *Express*, which he took occasion to utter in a recent speech before the Democratic Union Association of this City on the 29th ult., in relation to the Pacific Railroad. To say that the speech was not an able one of its class, would be misrepresentation. Some of its views on the subject of arrests and imprisonment without hearing, without trial, and without law are clear and unanswerable, and many others which he offered have force; but when he asserted "that the appropriation of millions of money to a few wealthy corporators of the Pacific Railroad by Congress in time of war was a wasteful exercise of the power of appropriation," he was evidently talking about a matter he did not understand. Congress has appropriated no money at all to a few wealthy corporators. When a certain amount of stock is subscribed, and a certain amount paid in, then the Company which shall thus go into operation, may, after building and completing forty miles of railway, receive the bonds of the Government payable in thirty years from date, at the rate of sixteen thousand dollars per mile; and for the Western sections, to the extent of three hundred miles between the Rocky Mountains and the Nevada, in parts the most mountainous and difficult of construction, bonds are also to be issued in the proportions of forty-eight thousand dollars and forty thousand dollars to the constructed mile. But the whole issue of the credits is limited to fifty millions of dollars; and if, as is contemplated by the act, the construction of the road will not be effected until 1874, then the advances by the Government of its bonds until that time, will only be about five millions of dollars a year, less by two millions three hundred and fifty-seven thousand dollars, than it has been paying the last year for its transportation to San Francisco by the present routes. Thus the enormous appropriations so alarmingly contemplated by Mr. Brooks, melt away into dim and distant advances of credit, several millions per annum less in amount than the Government has been paying, and is still paying for transportation to California. This fact is worthy of special notice. It demolishes all such arguments at a blow. The Pacific Railroad Company, in reality will only borrow from the government during the next ten years, two millions and a third in credits annually of the amount it is actually compelled now to pay in cash to shippers, transportation companies, railroads, and overland expresses.

Is it then the interest of the Government, to go on paying nearly eight millions a year cash, for it is almost that, to keep up its communications with California, Oregon, and the Washington Territory, or to loan its credit merely for five millions annually on good security, get all its money back with interest, and save on its future transportation by using the railway at least fifty per cent. The Government spends as many millions in a single week to carry on this war, and no one objects, as it will have to advance in the shape of credit to build this road for a whole year. The one expenditure, necessary as it is, proper as it is, loyal as it is, ends in a waste of life and property for the time being, puts back our material progress and seriously damages all our commercial interests, but in this case on the contrary, the expenditure, or rather the credit, small as it is, is to secure life and property, advances our material interests, extends our commerce, and develops our resources beyond all present calculation. The politicians, therefore, who clamor for money for war purposes,

seem to be ignorant that the waste and ruin of war must be anticipated, provided for, and cannot be better repaired than by just such projects as canals and railroads.

Now then, as no appropriation of millions has been made, or is to be made, as alleged by Mr. Brooks, we need not notice at length that insinuation about its being given "to a *few wealthy* corporators." There were a hundred and fifty corporators and more named in the Act, and that there are some wealthy men among them we do not doubt; but the majority of them were gentlemen, selected without regard to means from a class of enterprising, adventurous pioneers and explorers of the great and fertile West, who had yet their fortunes to make, and only expect to make them by participating in the general prosperity which attends great internal improvements. These bore their own expenses, most of them travelling thousands of miles to take part in the proceedings, and to impress on their friends in the East the unspeakable importance of developing the great and dormant resources of the West. Nor was their appeal, or their earnestness, or their testimony in vain. One had only to look around and see what Chicago is, considering what it very recently was, to admit the propriety of having as many more as possible of such great commercial centres in the West. The British Government is aiding in the immediate construction of railways in India which are to cost three hundred millions of dollars, and 1,181 miles are to be opened for traffic the present year.

So that the work to be performed by us is not of such vast proportions as to excite any alarm. We are fully equal to it. If Ohio has been able within a few years to construct 3,400 miles of railways, Illinois 2,584, New York 2,600, Pennsylvania 2,300, and Indiana cramped and hampered as she has been, 1,280, we contend that the United States are competent to build this Pacific road of 1,500 miles or more, and in a very short time. Indeed any one of the States we have mentioned would be able to do it; and California, which is eight times as large as New York, could undertake it alone, particularly as she has not as yet any debt incurred for a railway system of her own.

Never did the politicians, then, make a greater mistake than to attempt to drag this project into the dirty quagmires of party. Party has nothing to do with it. The last Congress was enabled to pass the bill solely because the Southern representatives were not there to defeat it, as they always did every measure which they feared would help the North. This is a project which has been before the country for many years, and is well understood. If we wish to keep our possessions on the Pacific Ocean, if we wish California to dig out three millions of gold per month and send them to New York to pay our foreign differences, if we wish to make our country greater, stronger, more harmonious, if we wish to show the affection for our kith and kin within the Golden gate which is continually open to us, then let us construct this road as speedily as possible, and frown down, oppose and defeat every demagogue who seeks to rise upon its ruin. Spend the fifty millions if possible the very first year if the line can thus be extended to the Nevada, let all other similar plans, schemes and projects, give place to this until it is a fixed fact. It is not often in the life of a young nation that such an opportunity occurs, as this which is now ours. It took hundreds of years to find a way round the world, hundreds of years to cross a small isthmus, and now we have the chance of bringing the two greatest oceans of the world within a week's transit, of benefiting all the people who live upon their temperate shores, securing all their vast and valuable products, supplying their wants and controlling all their exchanges. The whole European and Asiatic world, it may be fairly considered, will be peacefully conquered by this great project. Let no small fry orators inveigh any more against its policy, or defame those who advocate it. Mr. Brooks is fond of latin quotations, we will give him one: *Ne sutor ultra crepidam.*

Cleveland, Painesville and Ashtabula R. R.

The income of this company for the fiscal year ending December 31, 1861, was as follows:

From passengers	$389,809 36
" freight	791,826 28
" mails	21,600 00
" express	36,175 37
" miscellaneous sources	5,564 35
	$1,244,975 36

And the expenses were:

Repairs of road	$117,567 47	
" locomotives	25,311 61	
" cars	37,172 69	
" buildings, etc.	14,143 12	
Freight expenses	102,194 26

" " " bonds	300,000 00	
		600,000 00
Surplus		$38,087 95
Add surplus January 1, 1861		161,620 67
Total surplus January 1, 1862		$199,708 62

Statement showing the earnings of the road for each of the last eight years:

1854	$870,430 36	1858	$1,111,353 47
1855	1,152,938 85	1859	934,320 85
1856	1,231,699 05	1860	1,069,325 36
1857	1,251,537 84	1861	1,244,975 36

The number of miles run by passenger engines in 1861, was 201,380; by freight engines, 282,917; by wood engines, 10,240; by switching engines, 58,329; by construction engines, 26,125—total mileage of engines, 578,991. The total mileage in 1860 was 496,330—increase, 82,661.

The equipment consists of 30 locomotives; 25 first class and 9 second class passenger cars; 6 baggage, 2 mail, 244 box, 140 stock, 78 platform, 42 gravel, 5 drovers' caboose, and 3 boarding cars.

The assets and liabilities of the company January 1, 1862, were as follows:

ASSETS.

Construction	$3,206,933 66
Second track	224,236 21
Engines and cars	555,367 78
Sunbury and Erie R. R. Co. stock	500,000 00
Indianapolis & Bellefontaine R. R. stock, $70,000, valued at	5,000 00
Cleveland & Pittsburg R. R. bonds, $2,500, cost	2,000 00
Indianapolis, Pittsburg and Cleveland R. R. bonds, $3,500, cost 72½	2,537 50
Toledo, Logansport and Burlington R. R. Co. bonds	25,000 00
Meredosia bridge Co	3,186 40
Bills receivable	16,383 54
Due from agents and other roads	2,438 19
Materials on hand	67,421 08
Fuel on hand	15,300 00
Due from P. O. Department	4,150 18
Water Street lot	11,612 14
Cash in hands of treasurer	241,493 89
	$4,888,060 57

LIABILITIES.

Capital stock	$3,000,000 00
First mortgage bonds	25,000 00
Second mortgage bonds	228,000 00
Special mortgage bonds, issued to S. & E. R. R. Co	500,000 00
Dividend mortgage bonds	900,000 00
Bills payable	30,000 00
Due other companies	5,351 95
Surplus earnings	199,708 62
	$4,888,060 57

The number of passengers carried eastwardly, was 112,086, of whom 60,147 were through, and 51,839 way; westwardly, 125,192, of whom 74,383 were through, and 50,809, way. The number of second class and emigrant passengers carried eastwardly was 11,094; westwardly, 25,768. The total number of passengers carried one mile was 16,177,457.

The number of pounds of freight transported over the road was 912,132,111, of which 673,914,555 were carried eastwardly, and 238,217,556 westwardly. Of the eastward bound freight, 628,883,034 pounds were through, and 45,031,521 way. Of the westward, 318,650,543 were through, and 19,567,013 way. The number of tons carried one mile was 41,746,479. The average price per ton per mile was 1.89 cts.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Sept. 26th, 1862, was as follows:

Passengers	$35,743 54
Freight and live stock	27,939 30
Mails and sundries	1,652 07
	$65,334 91
Corresponding week of last year	63,114 23
Increase	$2,220 68

The receipts of the Grand Trunk Railway of Canada for the week ending September 20, 1862, were:

Passengers	$25,437 69
Mails and sundries	2,960 90
Freight and live stock	45,234 07
Total	$73,632 66
Corresponding week of last year	65,705 30
Increase	$7,927 36

The Petroleum Trade.

A statement made by a Toronto journal shows the wonderful development of the petroleum trade in Canada West. From the wells at Wyoming station, on the Great Western Railway, between 2,500 and 3,000 barrels per week are exported; but so fast is the business increasing that application for transporting 60,000 barrels has been made to the company. In that portion of Enniskillen township in which petroleum is found, the annual receipts amount to $127,000; yet this is only a beginning. Almost every day brings strangers from England to the neighborhood, enquiring into the truth of the reports given out respecting the wells. The Canadian Oil Company of London have sent out an agent to make inquiries before commencing operations. It is reported that other companies are being formed in Great Britain to carry on the extensive business of barrelling, shipping and refining the article. One Western firm have cleared $10,000 by the direct shipment of 2,000 barrels to England; and we hear that several vessels are now on their way to Sarnia to be loaded, while still larger quantities are going forward by rail to the Atlantic ports.

The Great Western Railway Company are about to construct a branch road to the springs; a plank road to Dresden, on the Sydenham river, is also talked about. The making of barrels has already become a large business in that part of the country. Several refineries are being started in Enniskillen. Whether these all succeed in retaining the manufacture in the Province, or whether it will be carried on principally in England, is yet conjectural. Among the other uses to which petroleum has been put is the making of *gas* for lighting houses, for which it is asserted to be the cheapest substance yet employed.

Carelessness of Travelers; Riding with Elbows out of Car Windows.

ALTHOUGH PASSENGERS ARE CARRIED WITHOUT FARE, THE COMPANY MUST EXERCISE REASONABLE CARE. WHAT NEGLIGENCE OF THE PASSENGER WILL DISCHARGE THE COMPANY FROM LIABILITY.

The following case (*Robert M. Todd vs. The Old Colony and Fall River Railroad Company,*) recently came before the Supreme Court of Massachusetts, on appeal from a judgment rendered upon the verdict of a jury awarding the plaintiff the sum of $2,000 damages. The action was brought to recover compensation for injuries received by the plaintiff while travelling in the defendants' cars.

It appears that the defendants' road is located parallel with a track of the Boston and Worcester Railroad Corporation, and while the plaintiff was travelling in a passenger car of the defendants, and seated by an open window, the door of a freight car, which had been left by the Boston and Worcester R. R. Corporation standing upon their track, being unfastened, swung round and struck the plaintiff's arm with its projecting hasps and caused the injury complained of. The plaintiff was riding by permission of the superintendent of the defendants' road and the conductor of the train, without paying fare.

The plaintiff had claimed damages of the Boston and Worcester Railroad Corporation for the same injury, and his claim was referred to arbitrators, who made an award in his favor, for $1,000 and costs, which was duly returned into the Superior Court for Suffolk County in compliance with the terms of the submission, where it was opened, filed, and entered, and was still pending, no further action having been had thereon. The cost of the arbitration was paid by the President of the Boston and Worcester Railroad Corporation.

The plaintiff's counsel contended, on the evidence, that it appeared that the plaintiff's arm, when it was struck was outside of the window of the car; and asked the court to instruct the jury as follows:

First, that the award between the plaintiff and the Boston and Worcester Railroad Corporation operated as a bar to the plaintiff's claim upon the defendants. Second, that if the jury believed that the plaintiff's arm or elbow was out of the window of the car in which he was riding at the time when it was struck by the car door, or hasp upon it, of the Boston and Worcester Railroad Corporation, this of itself was such a want of due care on the part of the plaintiff that he could not recover. Third, that if the plaintiff was riding free of charge, and by courtesy, in the cars of the defendants, at the time of the accident by which he was injured, the defendants were not bound to observe the same degree of care and diligence towards the plaintiff as towards a passenger who paid fare.

The judge instructed the jury that the award was no bar to the present action: and that, although the plaintiff was riding without paying fare, the defendants, under the circumstances, were bound to the same degree of care and diligence towards him as if he had paid fare; and left it as a question of fact for the jury, if they should find that the plaintiff's arm or elbow was outside of the car window when it was struck, whether he was using the care incumbent on him as a passenger.

The following is the opinion of the Court.

BIGELOW, C. J.—The award offered by the defendants constitutes no bar to the present action. It settles nothing conclusively between the parties. It is still open to revision by the court to which it was returned, and may be set aside or adjudged void, for any good cause. It can have no greater effect than a verdict of a jury. It operates neither as a satisfaction, nor as a judgment. Assuming, without deciding, that a judgment for a personal injury, against one of two joint tort-feasors would be a bar to an action against the other, there is no good reason for the position that the pendency of an action against one should operate as a bar to the maintenance by the party injured of a separate action against the other. The rule is well settled, that co-tresspassers are jointly and severally liable, and that separate actions may be maintained against them for their wrongful acts. Until a judgment against one has been obtained, it is uncertain whether the party injured will be able to maintain more than one action. Clearly, it is no defence to show that another person committed the alleged wrongful acts in company with the defendant. It is difficult therefore, to see how his liability is affected by the fact that his co-trespasser is sued for the same act, in another action. * * * * *

Nor can it make any difference as to the effect of the award that the costs of the reference were paid by the Boston and Worcester Railroad Corporation. Such payment cannot be regarded as a part performance of the award. It was only a preliminary step, by which the corporation obtained possession of it from the arbitrators for the purpose of returning it into court. The validity of the award and the rights of the plaintiff under it were wholly unaffected by this act of the corporation, a *fortiori*, it can have no effect to bar the plaintiff from maintaining this action.

The instruction which the defendants asked concerning the degree of care and diligence which they were bound to exercise towards the plaintiff was rightly refused. If it be true that in certain cases a distinction is to be made as to the relative duty of carriers of passengers, towards those who pay for the transportation, and those who are carried gratuitously, it does not appear that the facts proved at the trial of this case rendered it material to call the attention of the jury to it. The defendants having undertaken to transport the plaintiff in their cars, were bound to the use of due and reasonable care in performing a duty which they had voluntarily assumed; and if, by omitting to take such precautions as were necessary and proper to prevent a person exercising due care from receiving an injury, the plaintiff was injured, he is entitled to recover compensation therefor.

The only error in the instructions of the court related to that part of the case which involved an inquiry into the position of the plaintiff's arm at the time of the accident. If he was then riding in the car with his elbow or arm projecting out of the window, by reason of which he sustained an injury, he was guilty of a want of due care, which would prevent him from maintaining his action. Looking at the mode in which railroads are constructed, with posts and barriers which are placed very near to the track on which the cars are to pass, the rapid rate at which trains move, the manner in which cars are made, with seats to accommodate passengers so as to avoid any exposure of the body or limbs to outward objects in passing, we can see no ground on which it can be contended that a person travelling on a railroad is exercising reasonable care in placing his arm in such a position that it protrudes from a window and may come in contact with external obstructions. Certainly, if it is want of due care to attempt to leave a car when the train is in motion, although going at a slow rate of speed, as has been heretofore determined by this court, it is no less a want of proper care to ride in a car with an arm or leg exposed to collision against passing trains or the necessary structures on the sides of the track. Nor was it the province of the jury to determine, as a matter of fact, whether the plaintiff used due and reasonable care, if it was proved that his arm or a portion of it was outside of the window at the time of the accident. If there was no dispute or controversy about this fact, and the position of his arm was the cause of, or contributed to the accident, the plaintiff failed to prove an essential element to the maintenance of his action. In such a state of evidence, it was the duty of the court to decide on its legal effect, and to say to the jury that the plaintiff had failed to make out his case.

We are therefore of opinion that the defendants were entitled to a more explicit instruction in answer to their second prayer than was given by the court, and that on this ground the verdict

rendered in favor of the plaintiff must be set aside, and a new trial granted.

Correspondence of the Railroad Journal.

Utica and Booneville Railroad.

(FROM A NEW CONTRIBUTOR.)

UTICA SEPT. 30.

I have just visited Trenton Falls. The season is now over, but the charms of the scenery are perhaps greater at this time than ever. The place is easily reached by the Booneville railroad and a most agreeable conversation in the cars with the Superintendent in relation to the affairs of the company, induces me to write you this letter. It is well known that this road was at its outset very unfortunate, just as many of the best in this country have been. It was literally smashed up, but the pieces were carefully put together and a new organization took place with a capital equivalent to the debt for which it was purchased in. It then became necessary to put it in thorough repair and this has been efficiently done.

In addition to this, a most splendid piece of work is going on, which I am astonished to find has scarcely been noticed by tourists or newspapers.

I allude to the Viaduct over the Cincinnati Creek, as it is called. This is an embankment 125 feet high and 1200 long with a large stone culvert. It has been constructed without incurring one dollar of new debt, and is rapidly approaching completion. Indeed the company has now no debts, but a debt of gratitude to Mr. Miller, the Superintendent, and John Butterfield one of the principal proprietors. The last named is a character. Besides setting the Booneville on its legs, he is one of the principal Directors of the American Express Company, of the Overland Mail and the Telegraph, and sends a General to the Army, his son, to represent his interests in that part of his country, who does it well. You may think that Railways are matters of fact merely, and have no relation with human passions or metaphysical abstractions. I do know that Dionysius Lardner, in his work on the subject, never treated it in this manner. But the Booneville route leans that way. The present terminus is at Booneville, about thirty-one miles from Utica, and the grades over the Deerfield hills which at a distance would seem impassable, are none of them more than sixty feet to the mile. This is now considered an easy incline, though once it was thought that on all such, the engine wheels would have to be cogged along the rails.

You see, Mr. Editor, that in this part of the world, though there is much lumber and much traffic in it, the inhabitants themselves think there is nothing like leather. Thus the tanneries are very numerous, and the hemlock trees are equal to any possible demand upon them for their purposes.

It is then demonstrable to the people here about, that the Booneville road, when extended due North to Lowville, will catch all the lumber and leather trade, (of which even now it has a share,) will cut through the Watertown line, tap the iron Country of Rossi, and bring up all standing opposite Brockville, one of the prettiest towns in Lower Canada. The Ogdensburg route would, they flatter themselves, be nowhere after this. Now then, mens' minds are here agitated on this subject. The project assumes the form of question and answer, and it becomes metaphysical so far as this; whether humanity in the full possession of its reason would be justifiable in overlooking the necessities of the tanneries, the price of leather, and the possible shoeless condition of our brave soldiers, as must be the case if the Booneville road is not extended to Lowville without delay and as much further as possible. I venture to predict that the humanitarians will come to the right conclusion, and the capitalists, rather tough fellows in a money argument, will also do so, particularly after reading this letter.

I have a weakness for several branches of natural philosophy. I find myself warmed up considerably with the fossil remains about here, of which I have often written. But here are the most beautiful chrystals of quartz I ever saw. They are hard enough to scratch glass, and uncommonly brilliant and refractive. There is one person at least who makes a business of collecting and selling these fossils and Trenton diamonds. Some of his specimens can scarcely be distinguished from topaz and I imagine they really are such. The prices range from five cents to as many dollars and there are plenty of buyers. The trilobite is in great perfection, some of the specimens being very large and the matrices uninjured. The price of the finest is five dollars. Among them is a very curious one. Two trilobites are seen with their heads close together as if they were taking counsel at the impending calamity which was to turn them into stone. They are generally found alone, as if they were an "unsociable beast," but here is a fact, and out of facts we form theories, and so by induction we come to the solemn conclusion, from this specimen, the trilobite was a social animal. But I have yet another fact for you. You remember that our mutual friend Shakspeare said that the uses of adversity were sweet, &c., (I privately disagree with him) and that they were like the toad, which though ugly and venemous, "wears yet a precious jewel in its head." You never saw such a toad, nor I neither, but I have come pretty near it, for mark you, among these fossils I speak of, there was a sweet little black three lobed fellow in whose head, or in whose eye (for trilobites have eyes after all the fuss about it) there is a sparkling little chrystal like a diamond apparently deposited there at the time of the transformation itself. This is really a curious freak of nature and requires explanation. There is among these same specimens, a chrystal of about one inch in length, inside of which there is a drop of water plainly visible. This is not a solitary instance as we read, but the proof is here singularly apparent. In the drop is a black substance which floats on its surface. As you turn the chrystal round, it rises to the top with each change of position thus fully demonstrating its verity and character. Professor Torrey informs me they are common but they invariably burst when placed in the cabinets of Collectors.

The most curious thing yet to be told is the following, which I had direct from Mr. Miller the Superintendent. In digging down through some high sand hills near the Trenton station, the workmen have recently found scattered about in the driest places, little balls of sand, about the size of hickory nut. These apparently are perfectly dry, but on being crushed in the hand, a considerable quantity of water escapes from them. Who can account for this? I am promised some specimens. The milk in the cocoa nut is easily understood, but who can tell how this water gets into the centre of a sand ball and stays there?

The gorges looked splendidly to day. At the eyrie perched on the brink of the high falls, I sat for hours this morning in an exstacy of admiration. A glass of cool lemonade (nothing stronger) added to the pleasure of the sensation. Those beautiful white Cedars flung their arms lovingly around us, and the mist sparkled with coronal rainbows. Yours, O. P. Q.

Tax on Manufactured Goods.

The following correspondence in reference to the application of the "Internal Revenue Act" is of great importance to Manufacturers, and we therefore give it in full:

TREASURY DEPARTMENT OFFICE OF INTERNAL REVENUE,
WASHINGTON, D. C., Aug. 8, 1862.

To the Hon. S. P. CHASE, *Secretary of the Treasury.*

SIR:—I am in daily receipt of letters containing inquiries relative to the construction of the seventy fifth section of the act entitled "An act to provide internal revenue to support the Government, and to pay interest on the public debt." The magnitude of the interest involved in these inquiries is such that I desired the opinion of the Solicitor of the Treasury, or other appropriate legal adviser of the Department. The questions on which I ask advice are:

First: Will a manufacturer, who, previous to Sept. 1, shall have removed goods, or wares, otherwise liable to taxation, from the place or premises where manufactured, to another place or to other premises in the same city or town, be thereby exempted from assessment on goods so removed?

Second: Will a manufacturer, who previous to Sept. 1, shall have removed goods or wares, otherwise liable to taxation, from the town or city where the manufactory is situated to another town or city, be thereby exempted from taxation on goods so removed? These questions assume that the manufacturer is the owner of the goods on the 1st of September. Should the opinion be that the manufacturer in the cases stated is exempt from taxation, I then desire to know whether a manufacturer of the articles mentioned in schedule C will, under the same circumstances, be likewise exempt from taxation.

Your obedient servant,
GEORGE S. BOUTWELL,
Commissioner of Internal Revenue.

The Solicitor of the Treasury, to whom this letter was referred, returned the following answer:—

TREASURY DEPARTMENT, SOLICITOR'S OFFICE,
Sept. 6, 1862.

SIR:—I have the honor herewith to return the letter of the Commissioner of Internal Revenue, dated Aug. 8, 1862, asking the opinion of the Solicitor of the Treasury upon certain questions which are stated by the commissioner. By an inspection of the first paragraph of the section referred to, it will be perceived that there are several classes of merchandise which are made subject to duties: First, such as are produced and sold after the first day of September, 1862. Second, such as are manufactured or made and sold after that date. Third, such as are removed for consumption; and Fourth, such as are removed for delivery to others than agents of the manufacturer or producer within the United States or Territories thereof, after the same date.

It will also be perceived that, giving to the language employed in the description of the last two classes its widest signification, those classes would embrace goods removed for consumption in the one case, or for delivery in the other, when-

ever—"at whatever time"—they might have been manufactured, or "from whatever place the removal might be made." The object of the last provision of the section was to limit the effect of the language thus employed. This limitation has been made by providing that the duty shall apply only, first, to such articles as are manufactured on or after the day specified, in which case it is immaterial from what place the removal occurs; and, second, to such as are manufactured and "not removed from the place of manufacture" prior to that date; thus, in the latter case, rendering the place of manufacture the only one a removal from which will subject the goods to duty.

The remaining points which it will be necessary to consider in order to supply answers to the first two inquiries of the Commissioner are, first, What is to be deemed the place of manufacture? and, second, What will amount to a removal from it? Upon the first point I am of opinion that by the expression, "the place of manufacture," Congress intended to designate the premises where the manufacture is carried on, together with the store-rooms therewith connected, and not the town or city in which the manufacture is prosecuted. I do not conceive it to be essential that the place of storage be on the same lot, or even adjoining the lot on which the goods are actually produced; but it must be a place connected with the manufactory, and used, as to the goods in question, as a place of storage.

The other point, so far as it involves more than the mere fact of physical removal—if, indeed, it be anything more than a modification of the question just considered—is one, as it seems to me, of some difficulty. Ordinarily, the place of manufacture would be understood to be either the premises where the actual production occurs, or those commonly used for the storage of the goods produced. But suppose a manufacturer to send goods to a temporary place of deposit in the same town or city with his manufactory, but for storage only, and perhaps for the mere purpose of avoiding the duty imposed by the act; or suppose a manufacturer who, beside disposing of his wares at wholesale, has in the same town or city with his manufactory an establishment where he sells them at retail, to send some of his goods to such retail establishments for sale; would the removal in the one case or the other thus supposed be such a one as is contemplated in the proviso referred to?

I think that in the last case stated it would be so, and that in the former it would not.

But again, suppose a manufacturer never to make sale of his wares at his manufactory, but to have connected therewith in some distant town or city a place of storage and sale to which he has sent goods—or suppose a manufacturer to send to such distant place, merely for storage or to avoid the payment of duty, a portion of his goods—would the removal in either or both of these cases be such as, if occurring before the 1st of September, to exempt the goods from duty? As I have stated, I consider this a question not without difficulty, but I incline to the opinion that in both cases the removal must, under ordinary circumstances be held to be complete.

I am of opinion that it would be too wide a latitude of construction to consider a storehouse in a distant town or city as, under ordinary circumstances, embraced within the description of "the place of manufacture." What I have written will indicate my views as clearly as I am prepared to state them upon the first two inquiries propounded.

As to the last inquiry, I have to say that, beside the seeming impropriety of adopting a construction which would impose a duty upon one class of goods, while another class equally bound in natural justice to pay duty, should be exempted, I conceive that the proviso under consideration applies as well to articles enumerated in Schedule C, as to those mentioned in section 75; the proviso is general, and applies to all articles upon which a duty is imposed by the act. The burdens imposed upon the articles mentioned in Schedule C are not be less "duties" that they are imposed by way of requiring the articles to be "stamped." I am, therefore, of opinion that the same rule must apply to the articles enumerated in Schedule C as applies to these mentioned in section 75.

With high respect,
EDWARD JORDAN, Solicitor.

Railroad Earnings--Monthly.

The following is a comparative statement of receipts of the Catawissa Railroad for the months of July and August, 1861 and 1862:

	1861.	1862.
July	$17,976 65	$37,316 86
Less connecting roads	3,898 67	13,490 15
	$14,077 98	$23,826 71
August	19,944 09	38,940 58
Less connecting roads	4,324 75	14,560 06
	$15,619 34	$24,380 52

The earnings of the Rome, Watertown and Ogdensburg R. R. in August, 1861 and 1862, were:

	1861.	1862.
Passengers	$12,528 99	$18,750 47
Freight	11,757 97	17,205 79
Other sources	3,463 77	2,616 89
Total	$27,750 73	$38,573 15
		27,750 73
Gain over 1861 (a little over 39 p. ct.)		$10,874 42

The earnings of the St. Louis, Alton and Chicago Railroad in September, 1861 and 1862, were as follows:

	1862.	1861.
September earnings	$114,612 12	$99,518 16
Total since 1st Jan.	745,048 16	717,887 58
Military earnings	114,413 45	73,538 47
Totals	$859,461 61	$791,427 25

The Norwich and Worcester road earned in September an increase in round numbers of $10,000 over September, 1861.

The Illinois Central Company's statement for September shows:

Sales of land	$45,454 60
Cash received for land and grain	102,733 73
Total	$148,188 33
TRAFFIC.	
September, 1862	$400,435 95
" 1861	289,862 36
Increase	$110,573 59

The Cleveland and Toledo Railroad earned in

September, 1862	$100,072 00
Do., 1861	85,639 00
Increase	$15,433 00

The Chicago and Rock Island Railroad earned in September, 1862.

	$145,897 00
Do., 1861	136,111 00
Increase	$9,786 00

The Michigan Southern and Northern Indiana Railroad earned in September, 1862.

	$276,109 00
Do., 1861	235,690 00
Increase	$40,419 00

The earnings of the Galena and Chicago Railroad Company in Sept., 1862, were

	$178,857 30
Do., 1861	200 275 94
Decrease	$21,418 64

The Buffalo, New York and Erie earnings for

September, 1862, were	$70,077 20
Do., 1861	51,212 40
Increase	$18,864 80

The earnings of the Toledo and Wabash Railroad for September, 1862, were.

	1862.	1861.
Passengers	$22 483 35	$21,481 45
Freight	147,896 52	121.056 05
Total	$170,379 87	$142,537 50
Increase		$27,842 37

The earnings of the Hudson River Railroad for

September, 1862, were	$212,118 48
Do., 1861	146,424 39
Increase	$65,694 09

The receipts of the New York and Harlem Railroad for September, 1862, were

	$99,435 24
Do., 1861	89,356 36
Increase	$10,078 88

New York, Providence and Boston (Stonington) Railroad.

The annual meeting of this company was held at Providence on the 30th ult., and the following Directors elected:

James J. Day, of Stonington, Conn.; Matthew Morgan, Thomas Tileston, Samuel D. Babcock, Daniel Drew, Hamilton Blydenburg, William F. Cary, Samuel Sloan, of New York; Nathan F. Dixon, of Westerly, R. I.

The receipts of the Company for the year ending August 31, 1862, have been as follows:

Through passage		$96,723 12
Local passage		61,756 81
		$158.479 93
Receipts from other roads		31,728 20
Through freight	$77.121 89	
Local freight	26,845 59	
		104,967 48
Mail service	$8,960 00	
Balance due last year	1,234 87	
Total	$10,194 87	
Less amount due P. O. Department	8,960 00	
		1 234 87
Interest on deposit		1,234 00
From sale of real estate		125 00
Balance August 31, 1861		30,414 13
Total		$328,183 61
The expenditures have been		$169,462 21
New cars		1,201 13
Paid unclaimed interest on bonds	$300 00	
Paid interest on 6 per cent. bonds	11,769 00	
		12,069 00
Dividend January and June, 1862	$90.461 52	
Dividends unclaimed	3,449 12	
		87,012 40
Paid unclaimed dividends		1,165 50
N. H., N. L. and S. R. R. Co.		880 21
Balance in cash and bonds purchased		55,277 60
Total		$328,183 61

The Crops in Iowa.

The yield of wheat is estimated at 20,000,000 bushels this year, being 1,750,000 bushels more than the crop of 1861. There have been 1,325,000 acres cultivated this season in corn, which will yield 76,250,000 bushels, or an excess over the crop of last year of 16,000,000 bushels. Oats will reach 10,000,000 bushels; hay 1,000,000 tons; sorghum 3,000,000 gallons; and potatoes double last year's quantity. The State will be able to export this year 175,000 cattle and 900,000 hogs. The increase of the sheep has been about one third during the past year, making the number in the State 850,000.

American Railroad Journal.

Saturday, October 11, 1869.

Stock and Money Market.

The upward tendency in securities noticed in our last has continued through the present week, with scarcely an interruption. Gold, government stocks, and those of incorporated companies, have participated in it. Gold closed on Thursday at 126, Exchange on London was 138½ to 139; Custom House notes, 121, and Treasury bonds (7.30), 106.

The share list was a little duller than previously; and there are not wanting indications, in the judgment of some men, of a suspension of the fever of speculation which has been so rife lately.

The rates for money remain without any change of importance. The earnings of our railroads for September, so far as reported, are quite up to the public expectations.

The following quotations of sales of securities are in addition to those given above:

New York—Illinois sterling bonds, 100; Illinois coupon bonds, 1862, 90½; do., 1870, 101; do., 1877, 101; do., 1879, 103; Alton and Terre Haute 3d mortgage preferred, 81, 82, and 82½; do., income bonds, 60, 61, 62, 63 and 64; Illinois Central cancelled bond scrip, 60 and 62; Illinois canal registered bonds, 97½; Toledo and Wabash interest bonds, 90; New York City 5s, 1878, 98; Goshen branch bonds, 102; Lackawanna and Western 1st mort., 106½; Cumberland coal pref. 11¼ to 17¼; Norwich and Worcester, 62 and 64; Rome and Watertown, 81 and 85; Indianapolis and Cincinnati, 40; Brooklyn City water loan, 109; Miss. and Mo. Land Grant, 54; Eighth Avenue (N. Y.) R. R., 150; Canton Co., 15¼ and 17. The closing prices on Wednesday where sales were not effected were as follows; Erie 2d mort., 113; New York and Harlem 2d mort., 104; Lacross and Milwaukee Land Grant bonds, 30; Chicago and North Western Green Bay Extension, 84; do., Appleton Extension, 90; Galena and Chicago 1st mort., 105; do., 1st mort., extended, 105; Chicago and Rock Island 1st mort., 109; Central New Jersey 1st mort., 112; Cleveland

and Pittsburg 1st mort., 100; do., 2d mort., 100.

Boston—Michigan Central 8s, 1869, 108½ and 112; Ogdensburg 1st mort., 85 and 87; do., 2d mort., 4½ and 6; Vermont Central 1st mort., 21; Rutland 1st mort., 42; do., 2d mort., 1½; Chicago Municipal 7s, 104; Massachusetts 6s, 1875, 115¼; do., 1876, 115; do., 1888, 114½; New Bedford and Taunton, 65¼; Boston, Conc. and Mont., pref., 26; Concord, 62; East Boston Ferry bonds, 90; Boston Water Power Co., 33½; Boston City 5 per ct. coupon stocks in certificates of $1,000 or $5,000 each, due April 1, 1883, (payable Oct. 13,) 108⅛; Phœnix Mining Co., 3¼; Pontiac, 2½, Petherick, 3⅛; North Cliff ⅝. Huron, 9; Toltec 3; Malden and Melrose, (horse) 6⅝.

Philadelphia—Long Island 6s, 99½; Camden and Amboy 6s, 1867, 100; do., 1875, 98½; Pittsburg, Ft. W. and Chicago, 2d mort., 92; Sunbury and Erie 7s, 100 and 103; Philadelphia and Sunbury 7s, 95¼; Pennsylvania coupon 6s, 106; Pittsburg coupon 6s, 81⅝; Lehigh Val., scrip 15; Schuylkill Nav., 5½ and 6¼; do., pref., 15⅝ and 17⅝; do., 6s, 1871, 61¾; do., 1872, 90; do., 1882, 73¼ and 75; Susq. Canal 5½, do., 6s, 35 to 37; Chesapeake and Delaware Canal 6s, 80½ and 88; Morris Canal, 50 to 59; Ph., Wil. and Balt., 58; Little Schuylkill, 20 and 23½; Girard College (horse) R. R., 27; Fifth and Sixth Streets, 50; Race and Vine, 10; Norristown, 49 to 50¾; West Branch bonds, 94¾.

Baltimore—N. W. Va. 1st mort., 98½ and 99; do., 2d mort., 93; Baltimore and Ohio bonds, 1875, 95; Western Maryland railroad bonds, 67½ and 68; do., endorsed, 99¼; Virginia 6s, 60; Maryland 6s, 1890, 105; City Passenger R. R., 13; Canton Co., 17; Springfield Mining Co., $2.25 per share; Guilford, 40; Balt. and N. C., 25; Gardiner Hill, 80. The quotations on Tuesday were: Washington Br., B. & O. R. R., 125*a*133; Baltimore and Ohio bonds, 1867, 98*a*100; do., 1880, 94; N. W. Va. 3d mort., 90; Central Ohio 2d mort., 92½; Maryland coupon 6s, 1870, 105½; Baltimore 5s, 1888-'90, 84*a*87.

Accidents to Excursion Trains.

In England excursion trains are much more a recognized source of income for Railroad Companies than in this country. On the lines leading out of the great cities, particularly London, they are of almost daily occurence; and those sent on Sunday are regularly advertised in the newspapers. There is this to be said in their behalf, that for a trifling sum laboring men and their families are enabled to escape out of the foul atmosphere and disagreeable sights incident to places like the metropolis, to enjoy the fresh air and agreeable scenery of the sea or the fields. We would not in the least underrate these advantages, though purchased by the sacrifice from Railroad employees of that Seventh Day which should be devoted to purposes other than mental or physical labor. But another objection is presenting itself there to the despatching of special trains for excursion parties—the loss of life and limb by collisions with the regular trains. We do not overestimate the matter in saying that more deaths and bruises have thus been caused, the past twelve months on the English Railways, than from all other agencies put together. Slaughters of dozens or scores of passengers have taken place this last Summer, some of them following so closely upon the other, that the public had not time to recover from one shock until another was upon them. While greater safety is becoming the rule as respects the regular passenger business, the danger seems to be on the increase as respects excursion trains.

In this country, though the people individually travel more than in any part of Europe, they appear to go in groups less than in England. The steamboat is more popular than the railroad car as a means of conveyance for excursionists. Still, we have had some bad accidents on a number of our lines, especially on occasions like the 4th of July. About seven years ago a party of Sunday School children were run into on a road in Eastern Pennsylvania, after celebrating the national anniversary; and the destruction of life occasioned thereby was such as to deter others from seeking enjoyment at so great a risk on holidays. On the whole, it is perhaps best for the Companies themselves that such a wholesome dread of accidents should pervade the public mind.

On this subject we have been interested by the perusal of a letter from "A Railway Director," which appears in a late number of the London *Times*. He is evidently one who has been behind the scene sufficiently to understand whereof he speaks. The Company of which he is a Director possess 250 miles of a line. The traffic is pretty heavy, and the road enjoys almost an immunity from accidents. The reason is, he observes, because the board have for years refused to grant excursion trains excepting when confined to one locality, as in the case of the Volunteer review. This policy was not adopted merely from motives of humanity, but from regard to profits just as well, it being held that the running of those trains is a positive loss to a Railroad Company.

The writer observes:—

A rich company, possessed of well paid and well disciplined servants, can conduct, without much danger, a very large extraordinary traffic, provided it be confined to a moderate section of a railway; and where that traffic is of so frequent recurrence that it assumes somewhat of a regular character, the danger is almost entirely extinguished. But this cannot be the case where excursion trains are run upon extraordinary occasions and for long journeys. The servants of the company or companies over whose lines the trains are to pass are not increased on account of the additional traffic; or, if they are, it is only to provide the attendants required for the excursion trains themselves, or at the stations at which the traffic arises. More generally they are served by drivers and guards working and being paid for extra time, and at the stations the passengers shift pretty much for themselves. The vigilance and experience, therefore, which suffice for the ordinary traffic throughout the "system" cannot guard against accident to the unknown addition by which they are to be taxed.

But further, excursion traffic is only profitable at seasons when the ordinary traffic is greatly swollen and cannot be carried on with punctuality. Even express and mail trains upon long lines are at such times often late by periods varying up to and over an hour. How frightful, therefore, must be the risks attending the launching upon the crowded line trains of which the running, the weight, and even the numbers are doubtful, if not unknown, to those charged with the details of working hundreds of miles of railway.

The directors who undertake such traffic are gambling with human lives as the penalty of loss.

Why, then, should excursion trains be run at all, it may be asked? The answer is that in the competition which exists between rival Companies one will make sacrifices and incur risks in order to divert travel from another. Either of these may perhaps form a link in some great chain of roads, and if the residue propose to "accommodate" the traveller by an extra train now and then, it is exceedingly difficult for all to keep out of it. So managers prefer to imperil the lives of passengers and throw away the property of their constituents rather than see a little business go temporarily into the hands of a rival, or have their road gain the reputation of being illiberal.

"The inference," says the *Times*, in reviewing this letter "is that our railways are encumbered with such an excess of traffic as to render railway travelling decidedly less secure than it might be. The truth is told by railway authorities themselves. They can hardly manage their ordinary traffic at busy times, and these are just the times, be it remembered, when excursion traffic is added to the work. At seasons when there are few travellers there are no excursionists. Yet, notwithstanding all this, and in the face of obligations which managers find scarcely supportable, every company is prepared to sacrifice everything, even the very dividends of its shareholders, for the sake of getting a little more traffic, or of keeping every pennyworth it has got. They are staggering under the weight of their business, but they would rather give up their profits than have it lightened."

It may seem strange that this petty rivalry should manifest itself to such an extent in England, where the roads have as much business as they can well transact. We have had our full share of it here in days past; but our decided conviction is that it has disappeared in a great measure and is on the decrease. We are slow to believe that the officers of any line leading into this city would be so silly as to encourage a system of travel which was injurious to the company and dangerous to life, merely because if A did not yield to the call for a special train, B would. And yet there is not a road terminating near this city whose capacity for business is not capable of a very considerable increase, particularly in the passenger line. But it is well that the chartering of excursion trains has not recently been encouraged and we trust the experience of the English will not be lost on us in this respect. The sale of what are here termed "excursion tickets," *i. e.* such as are good for one or two days back and forth, is a different matter.

Railways in India.

The Annual Report of Mr. Juland Danvers on the Railways of India, shows that the construction of these works is going on at a rate almost approaching to the progress made in this country during the last decade. At the commencement of this year 1,609 miles were open, to which will be added 1,181 miles by the close of 1862. The total expenditures on these works are £40,000,000, or allowing for the present year, £47,000,000, which is equivalent to £16,850 per mile. Included in this aggregate is, however, a considerable sum on works only in progress, so that the cost per mile is less than that stated above. Ten millions additional are to be expended by British capitalists, that amount having already been taken on a government pledge of five per cent dividend. The number of persons engaged on the works is 35,000, of whom 32,000 are natives. The number of

English stock and bondholders in India Railways is well up to 30 000.

Business of the Philadelphia Custom House.

The business of the Philadelphia Custom House, for the month of September, was as follows:

	1861.	1862.
In warehouse, Sept. 1	$1,128,679	$107,553
Warehoused from foreign ports	30,144	112,350
Warehoused from other districts	16,222	10,262
Withdrawn for consumption	105,833	121,994
In warehouse, Sept. 30	1,063,505	91,894
Entered for consumption	85,505	539,330
Free merchandise entered	17,814	13,168
Domestic produce exported	735,018	829,898

Duties.	1860.	1861.	1862.
September	$147,688	$57,054	$262,685
Previous 8 mos.	2,914,882	1,068,558	2,840,731
Total	$2,162,570	$1,125,612	$3,103,416

New York Canals.

The quantity of flour, wheat, corn and barley, left at tide-water from the commencement of navigation to the 30th September inclusive, during the years 1861 and 1862, was as follows:

	1861.	1862.	Increase.
Flour, bbls.	784,747	995,620	210,873
Wheat, bush.	16,478,748	61,150,154	4,671,406
Corn, bush.	14,763,810	15,038,379	274,569
Barley, bush.	263,157	440,821	167,664

By reducing the wheat to flour the quantity of the latter left at tide-water this year, compared with the corresponding period of last year, shows an increase of 1,145,154 bbls. of flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide-water from the commencement of navigation to and including the 30th of September, in the years indicated:

	1860. *Canal opened April 25.*	1861. *May 1.*	1862. *May 1.*
Flour, bbls.	560,449	784,747	995,620
Wheat, bush.	8,044,368	18,478,748	21,150,154
Corn, bush.	11,657,969	14,763,810	15,038,379
Barley, bush.	386,559	273,157	821,449
Oats, bush.	4,257,860	4,503,289	3,066,416
Rye, bush.	208,472	984,466	605,339
Beef, bbls.	4,513	541	11,358
Pork, bbls.	6,771	6,611	137,845
Bacon, lbs.	458,464	598,900	5,296,496
Butter, lbs.	249,490	288,765	304,858
Lard, lbs.	983,585	719,641	7,681,102
Cheese, lbs.	564,846	477,680	925,625
Wool	1,894,344	1,271,081	1,632,397

Sixth and Eighth Avenue Railroads.

At a meeting of the Board of Councilmen held on the 2d inst., a communication was received from the Comptroller with statement of the receipts of the Sixth and Eighth Avenue Railroad Companies, as reported to him, for the first eight months of this year, as follows:

	Sixth Av. R. R.	Eighth Av. R. R.
January	$29,772 69	$31,586 84
February	27,829 32	29,856 06
March	27,852 76	29,376 59
April	30,104 18	29,944 47
May	32,195 22	32,562 81
June	30,754 19	31,432 36
July	27,486 94	30,592 88
August	26,328 31	30,929 87
Total	$232,623 61	$246,281 88

Boston and Maine Railroad.

Mr. Israel M. Spelman, of Cambridge, has been elected president of the Boston and Maine Railroad Company for the ensuing year.

Hudson River Railroad.

The earnings of the Hudson River Railroad for the year ending Sept. 30, were as follows:

	1860–'61.	1861–'62.
October	$193,950 64	$173,260 89
November	169,548 71	197,761 77
December	220,370 19	246,281 98
January	223,157 37	307,330 18
February	205,342 69	281,568 10
March	167,559 96	308,963 46
April	139,750 84	202,346 11
May	150,807 63	192,442 41
June	122,682 83	151,427 24
July	114,804 23	159,768 83
August	135,298 67	193,442 33
September	146,424 39	212,118 48
Total	$1,939,698 14	$2,626,712 78
		1,989,698 14
Increase		$637,014 64

The Pennsylvania Railroad Bridge.

This structure which was completed last spring, is now in admirable working order. The pier is erected close to the Arsenal, and the track runs immediately alongside of the wall, above it. A large amount of freight daily passes over, together with great quantities of petroleum. This is taken to the foot of Christian street, where it is shipped to different ports. This road joins the track near Gray's Ferry road.

Baltimore Passenger Railway.

The City Passenger Railway Company have within a few days past awarded to Messrs. John E. Eschbach & Co. a contract for the building of a new branch city railway, as authorized by a city ordinance, from the corner of Baltimore and North streets to the Northern boundaries of the city. This line will begin at the intersection of North and Baltimore streets, pass up North to Lexington, to Calvert to Eager, and out Charles street avenue to the city limits; and in order to comply with the provisions of the ordinance, the work must be completed by the 1st of January, 1863. When finished, this will prove a great accomodation to the residents of North Baltimore.

Dimensions of the Great Lakes.

The government survey gives the following measurement of our great lakes:

	Length, miles.	Breadth, miles.	Area, miles.	Mean depth, miles.
Lake Superior	355	160	32,000	988
Lake Michigan	360	108	20,000	900
Lake Erie	250	80	6,000	200
Lake Ontario	180	65	6,000	500
Lake Huron	200	160	30,000	300

Long Island Railroad.

The following is a statement of business of the Long Island Railroad for six months to Oct. 1, 1862:

Gross earnings		$167,096 66
Cost of operating	$71,640 19	
Interest on debt	23,853 00	
Dividend 6 months	45,000 00	
		140,493 19
Surplus		$26,603 47

New York and Boston Air Line Railroad.

Another section of this road has been completed during the past week, and the cars now run to West Medway. The work on this road is still progressing, and within a few weeks the rails will be laid to Bellingham, and by the first of January to Woonsocket, which will complete the Massachusetts division of the road.

Valuation of Taxable Property in Kings County.

The following is the estimated value of property in Kings County for the years 1861 and 1862, as prepared by the assessors and presented to the Board of Supervisors at a meeting held Oct. 2d:

Wards.	1861.	1862.	Increase.
I.	$6,826,099	$6,299,750	*$26,349
II.	4,788,130	4,692,286	*89,844
III.	12,506,065	12,087,454	*418,611
IV.	5,656,283	5,608,854	*147,429
V.	2,860,154	2,814,779	*45,375
VI.	11,048,980	11,280,894	231,911
VII.	43,334,425	4,412,975	78,550
VIII.	3,920,853	3,975,498	54,645
IX.	7,152,710	7,295,778	143,068
X.	9,592,851	9,600,244	7,393
XI.	10,815,187	10,841,689	26,502
XII.	4,223,105	4,402,701	179,596
XIII.	7,392,912	7,433,389	40,477
XIV.	3,460,859	3,476,401	15,542
XV.	1,593,148	1,491,171	*101,972
XVI.	1,827,060	1,853,305	26,245
XVII.	2,232,495	2,232,389	*97
XVIII.	1,721,355	1,689,701	*31,654
XIX.	3,605,225	3,677,674	72,449
Total City.	$105,057,894	$105,072,941	
N. Utrecht.	$1,891,314	$1,993,010	$101,636
Flatbush	1,776,688	1,800,813	24,125
New Lotts	1,056,875	1,081,266	2,444
Gravesend	681,101	698,691	17,590
Flatlands	728,472	739,834	6,362
Total Towns	$6,134,500	$6,308,634	
Tot. County	$111,192,399	$111,381,575	$189,181

* Decrease.

Illinois Central Railroad.

The September earnings of the Illinois Central Railroad for five years have been as follows:

1858	$218,860 58
1859	246,655 59
1860	259,643 04
1861	289,862 36
1862	400,435 95

The Pacific Railroad.

We are indebted to S. De Witt Bloodgood, Esq., of this city, for a pamphlet copy of his Address at the meeting of the Pacific Railroad Corporators at Chicago on the 3d ult. The vast amount of valuable information contained therein, renders it highly desirable that it should have an extended circulation; we have therefore transferred it almost entire into our columns. What gives force to its arguments and opinions is the fact that the author has been largely interested in the construction of pioneer roads, such as the Ithaca and Owego, and the Albany and West Stockbridge. His contributions to scientific journals, on the subject of the application of steam to locomotion, have been numerous and popular. He is the author also of an essay entitled a "Treatise on Roads," which is considered a standard work. We understand that the Proceedings of the Convention, containing this and kindred Addresses, will shortly be published in an official form for general distribution:

Mr. President and Gentlemen.—Our national character was never better illustrated than on the present occasion. In the midst of a causeless and desperate rebellion against the happiest form of government which humanity was ever inspired to establish, while in the midst of an enormous expenditure of treasure, and the effusion of our most precious blood to preserve this Union, undeterred and undismayed we assemble here to-day under the authority of the National Legislature to organize an enterprise of the vastest proportions and with the most momentous results. A

railway across a continent, a connection between the two great oceans of the globe, and a change in the traffic of Europe Asia, and America—these are the objects which present themselves for our consideration. After years of discussion, numerous surveys, and a general conviction that the proposed work is within our power and our resources, we have been selected to give form and tone and character to the project, and we here thoughtfully, I trust, assume a responsibility which is not for a day, but all time. It is with this feeling I approach the subject, happy to be among the number of those to whom so great and honorable a trust is confided by the people of the United States. This is a meeting of corporators for the time being, intrusted with important duties, so important than on our present action the success of the enterprise may essentially depend.

The shape we give it will be likely to be preserved. If we appeal in the right way to the intelligence and patriotism of the people, we may hope for their support and an adoption of our recommendations; but, on the other hand, if any other than a comprehensive and liberal spirit prevail, if local interests and personal wishes are to have a preference, we may expect to see an early application for the repeal of the act of Congress, an intention to which utterance has already been given, even in my hearing.

What, then, is our plan? How shall it best be put forth to the public? How can we assure capitalists of its remunerative character?—how convince the people, who have loaned us the national credit, that their confidence is not misplaced, and that their favor is not bestowed on an unworthy and ill considered scheme? And how shall we accomplish what we now inaugurate, in the shortest time, in the most substantial manner, and at the least expense? All this we shall have to point out, if we expect to obtain, outside of the government, any large financial support. It is for us to show this in the first place, for, if the necessary subscriptions are not obtained, sufficient to commence and proceed with the work, the generous aid of the national credit will not be fully available. In this, as in almost all other great efforts, it is the first step which costs.

The letter of our duty is plain enough. It is set forth clearly in the act of incorporation. The first question is, where shall we open books of subscription, with how much notice, and to whom shall this duty be entrusted? Shall these books be opened without preliminary maps, tables, explanations, and arguments, or shall these be carefully prepared and given adequate circulation at the start? Shall the number of Directors hereafter to be chosen be thirteen in number, or be enlarged? Shall a railway of almost two thousand miles in extent be left to the management of a few or many persons? May they be taken from one State, or distributed equitably among all the States furnishing the capital, or in proportion to the subscriptions? These questions considered in time, and decided in time, will have an important bearing on the immediate success of the project,—immediate I say, for even if we should falter in our present movements, the Pacific Railroad will survive all errors, all mistakes; it is a work certainly and finally to be accomplished.

From the words of the act, I have inferred that the details of the work will fall into the hands of the direction the moment it is duly elected, and that, therefore, we, as the original corporators, need not embarrass ourselves with ulterior matters of engineering or finance. We are not even to put the first spade in the ground, but must see that the money is ready for the laborers when the first turf is raised.

When this project was first entertained, after the conquest and acquisition of California, it was looked upon by many reflecting people as one not only visionary, but not within the range of possibility. The poetry of the idea is, however, found reducible to prosaic fact. We have no longer before us a castle in the air to dream about, but a real, substantial actual edifice to construct.

This Pacific Railroad is an absolute, exacting necessity. We have a sister State on the shores of a great ocean, which we early sought to reach, to which the star of Empire was leading us, and at which we now have actually arrived, unequalled for its mineral wealth, its admirable climate, and its exhaustless fertility, an empire in itself, an ally, a friend in need, the most civilized and prosperous country on the whole Pacific Ocean, not a colony of tawny natives, mixed up with European masters held by force, and robbed by them at pleasure, but a republican State, recognising the laws of Christianity and civilization, already mature and prosperous. Sprung originally, like another Minerva, from the brain of the American Jove, California could, after a few years, build this road alone. According to the government survey she possesses four hundred thousand square miles of territory, which would give eight States as large as New York, fifty as large as New Jersey, and fifty-seven as large as Massachusetts. With a population equal per square mile to that of New Jersey, California would support eighteen millions of inhabitants; if equal to New York, twenty millions; and if equal to Massachusetts, forty millions.

That she will be a staunch supporter of the work is very certain. Her representatives in Congress in fact secured the passage of the act. Her sons are here with us to-day to see if we comprehend the vastness of the enterprise. To leave such an ally and friend to the hazardous connection of long and dangerous voyages, to the border intrusion of two large foreign dependencies, Russian and British America, would be but a poor return for their loyalty to the Union, and a poor exchange for the valuable products she now sends to us through her golden gates, and which enable us to meet the unfriendly drain of the foreign bankers, not only with impunity but indifference. In the spirit of enlightened selfishness, then, if in no other, we must perceive, that the construction of this railroad is an absolute necessity, and an unexampled advantage to ourselves. We have not only a large and profitable trade with California, but with countries far beyond, which has been conducted, though spiritedly, perseveringly, and profitably for many years, yet at an unnecessary cost. The road to India, to China, to Japan has been a long and circuitous one; we have had to pay toll to the turnpike keepers, the bankers of Liverpool and London, when we wished to pass to the East for our teas, our silks, or our drugs. Freights, insurances, commissions, and premiums on bills of exchange have piled up their charges upon our imports, on something of the principle of KEPLER'S famous law, increasing "as the square of the distance."

Let us have this road and our invoices will be shorn of most of these items, so formidable in any European account rendered, as many of us no doubt have happened to know. All we save in these will be a reduction in price to the consumer here at home. The day is near at hand, I trust, that when we drink our cup of tea, we shall do so without having lost a single drop to any inimical banker.

The extent and importance of our East India trade have been growing familiar to the American comprehension. But before we examine into this, let us see what we are to gain by it for ourselves. In Congress, and while the Pacific bill was under consideration, Mr. MCDOUGALL, the Senator, and Mr. PHELPS, a Member of Congress from California, most ably presented this subject before it, being comprehensive and masterly in their arguments in favor of its passage. Mr. MCDOUGALL stated the fact, that the United States Government paid yearly for transportation to California, to be saved by the use of this road, no less a sum annually than $7,357,000. This was no guess work, it was taken from the Report of the Chairman of the House Committee. It is about 100 per cent more than the interest guaranteed by the goverment on the completion of the road. This difference, with the five per cent reserved to the government by the bill, will pay the whole principal and interest of the bonds years before they mature.

But let us see for a moment, and realise if possible, the results of Mr. MCDOUGALL'S calculations, which I learn from him, were the result of months of careful consideration, and which are below rather than above the mark.

From his speech in the United States Senate on the bill, we make the following extracts:

STARTLING CALCULATIONS AS TO THE PACIFIC RAILROAD.

The present cost and loss of the transportation of men and merchandise between Boston, New York, Philadelphia, and Baltimore on the one side, and San Francisco on the other, from the best compiled statistics, may be stated thus:

Passenger transits both ways, including overland transits, 100,000, averaging $150 per capita	$15,000,000
Time of passenger transits, average forty days, and counting them as dead labor while in transit and otherwise, their average labor worth two dollars per diem	8,000,000
Freights both ways around the Horn, 215,000 tons, at an average of twenty dollars per ton	4,300,000
Value of freights both ways, other than gold and silver, $110,000,000. On this, by the reason of twice passing through the tropics, there is, from leakage, sweating, and other causes, a loss of not less than seven per cent not covered by insurance	7,700,000
Insurance, and gross losses uninsured; that is, where parties are their own insurers. three per cent	3,300,000
Interest on the capital which may be considered dead while 135 days in transitn—say four per cent	4,400,000
Government transportation, as stated.	7,357,000
Isthmus transportation (excluding passengers) and insurance on the same.	3,250,000
Freights to Nevada Territory, employing 2,000 teams 200 days each year, at a cost of twenty-five dollars per team	10,000,000
Passenger transits to and from Nevada.	2,500,000
Passengers and freights to and from Denver and Salt Lake, estimated without data at	10,000,000
	$75,807,000

The cost of the same business and service by a continuous line of railroad from San Francisco to the point of delivery east, and the reverse, may be stated thus:

Two hundred and fifteen thousand tons, at $30	$6,450,000
Interest on $110,000,000 for ten days, one-third per cent	366,666
One hundred thousand passenger transits at $50 each	5,000,000
Ten days each passenger in transit, loss $2 per diem	2,000,0
One hundred tons gold and silver, $300 per ton	30,00
Isthmus merchandise	1,250,000
Nevada, Utah, and Colorado passengers and freights, estimated	2,500,000
Damage and insurance	1,600,000
Government freights and transportation, computed as equal to interest.	3,773,800
	$22,970,466

But there is another important view of this subject. Mr. PHELPS, the Member of Congress from California, in his speech on the same subject, exhibits a statement equally astounding as to the condition of our East India Trade, and the losses it is subjected to on its present basis. He remarks:

"Our imports from China in the year 1857 amounted to $8,356,932, and our domestic exports to China, $3,019,000, leaving a balance against us of $5,337,032. In 1858 our imports were $10,570,536, and our exports $2,467,645, leaving a balance against us of $8,102,891. In 1860 our imports from the same source were $13,566,641, and our

exports $7,170,784, leaving a balance against us of $6,395,802. These figures exclude the exports of gold and silver. It will be observed that our trade with this nation is rapidly increasing, our imports having risen from 1857 to 1860 about sixty per cent. * * * *

"It is reasonable to suppose that under any circumstances the balance of the trade will not at any time be less than in 1860; say, $6,400,000. This amount of indebtedness is mostly paid through English houses, at a cost to us of about twenty per cent. At this rate, continues Mr. PHELPS, the cost of remittance is $1,280,000 annually, and becomes a part of the price to the American consumers of tea.

"If we can, by the construction of this road, turn this treasure shipment to new channels, and it can be made from San Francisco in twenty-three days, saving from the present specie route at least sixty days in time, reducing the cost of shipment, including exchange, freight, interest, and insurance, to not exceeding four per cent, it would cause a net annual saving to our people of $984,000. To the sum thus saved should be added the cost of the same amount of treasure shipped from San Francisco to New York, which cannot be done at less rates than three and one-half per cent, and would amount to $259,000.

"I may very properly add, that the *entire* balance of trade against us on what is known in mercantile parlance as the East India trade, will not fall short of $18,000,000 per annum. On this sum the saving in exchange would amount to $3,600,000. But these are but a small portion of the benefits this country would derive from the diverting of the specie route of the world into American channels of trade."

Fifty millions of treasure which annually find their way to the East by the old commercial routes, would necessarily change their direction and come westward over this road. Nor was Mr. PHELPS out of the way when he said this. Its construction is even now as much dreaded by our foreign enemies, as the restoration of the Union itself. Not long since I cut from a leading London journal a paragraph founded upon this very supposition, though first suggested by speculations in a California print. It reads thus, and is so pertinent that I may be excused for asking attention to its details:

"The California papers state that an enormous sum of money would be saved by English, French, and American merchants in premiums on gold if a steam communication existed between San Francisco and China. California sends to the eastern States of America, England, and France, eight millions sterling of gold yearly to pay for goods which it wants. San Francisco is twenty-five days from China, the Eastern States of America are seventy days, and England and France are sixty days from China. A New York house, we will say, imports every year £100,000 worth of goods from China, and exports goods to the same amount to California. That State pays three per cent on the £100,000 worth of gold sent to the New York house, and the latter pays six per cent to send it to China. Now if steam packet communication existed between San Francisco and China, there would be no necessity to incur the expense of thus sending specie three parts round the globe. California could pay to China the £100,000 owed by the New York house, and thus California, China, and New York would be quits. A telegram from New York to San Francisco could manage the business. In the same manner, California could pay to China what it owes to France and England. In ten days, by means of the Continental American Telegraph, A, in London or Paris, could send to B in San Francisco, to forward to C in Hong Kong, the amount owing from B to A, and which A owes to C. About seven per cent out of nine would thus be saved. Now, seven per cent on £8,000,000 is nearly $600,000."

Thus we see the truth is beginning to be perceived abroad, and the article foreshadows the conclusion. I make but a single objection to its corollary—I say it with all possible good humor and courtesy—San Francisco will not be the clearing-house, it will be New York. Threadneedle Street, the barometer of the financial world, will find its fluctuations registered there, and Wall Street will be the vernier of the scale.

But in order to do justice to these considerations, another subject material in interest presents itself. The railway, while in itself a project worthy of our utmost exertions to complete it, will necessarily involve another, and this is an ocean mail steam service on the Pacific. I believe that Congress at its last session had a bill before it granting a subvention to a California company of $500,000 for that purpose. It was not passed; if it had, I should rejoice; I only wish the same assistance had been extended to the Atlantic companies. But I had the opinion then, as I have it now, that this service may be maintained in a simpler and more efficient way. It is well known that within the last two years a large number of wooden as well as iron steam sloops have been added to our navy. Some of them are very swift vessels; but when this war is over what is to be done with them. Iron armor has superseded wooden walls. The latter must be abandoned in all future naval wars. Our wooden ships of the class I have mentioned, most of them new and costly, will be laid up in our navy yards, laid up "in cold obstruction and to rot;" in all probability a dead loss to the country! All then the government has to do, is to place these supernumerary vessels on the ocean as government mail packets, to reduce their armaments and crews to a peace standard, and establish regular lines on the principal routes between our chief Atlantic and Pacific ports, and those of the foreign countries with which we trade. They will perform the double duty of protecting our commerce, and becoming its active auxiliaries. This will be far cheaper than to grant subventions and monopolies to private companies and avoid all the unpopularities of such measures. We should not wait a moment to do this, as soon as this war is over. All our ocean mail service is now performed in foreign ships. We have not a regular mail steamer afloat. There is only an occasional private steamer to Havana. If a New York merchant wishes to write to his agent in Liverpool, or Havre, or Bremen, or Rio Janeiro, or Monte Video, or Vera Cruz, or Para, or Hong Kong, or Hakodada, his letter must go forward in an English mail bag. Take ten or twenty of our fastest steam sloops and place them on those routes, and our commerce will immediately revive. We shall be able to compete with all and every of the nations of the old world, in the markets where they thrive and from which they receive their regular correspondence.

* * * * * * * * *

Strange to say, that while in the construction of river and lake steamers we are far in advance of all other nations, in our oceanic enterprise we are far behind them. Even the cities of Bremen and Hamburgh have more mail packet steamships, afloat than the United States.

Is there any difficulty in the construction of this road? None worthy a doubt. The numerous governmental surveys, many of them made by engineers whom we now recognise as heroes, have settled the general question. The grades for a great portion of the distance are almost imperceptible. The materials are at hand, and of sufficient cheapness to give assurance of an economical construction. More than this, it is now demonstrated that railways may be built at a far less cost than formerly. One hundred and thirty-seven new railways are about to be commenced in the small islands of Great Britain, under the inducement that they may be built for nearly one-half less than they formerly were. Have we laborers in sufficient numbers to accomplish the work rapidly. This problem is solved by the fact, that we shall have at the close of this war nearly a million of men, who have been inured to fatigue, and the toils of the pick axe and the spade, who have not only shown a love of adventure and action, but the qualities of endurance and resolution. The employment will be congenial to their newly acquired taste and habits, and ensure liberal and profitable remuneration. Emigrants from abroad will flock towards this line of industrial competition, just as when our canal system was commenced, or the gold of California was discovered. As the work will be continuous for many years, we may expect to see colonies settling aronnd the local stations, each station a village or city perhaps, ganglions, knots, and supports to the great nerve which is to thrill with life, to become supports to it as it extends, and braces as it reposes, the great sympathisers with its activity and life. Nor is the work too gigantic it itself. It is said there were giants in other days. I think I can see such now. The American railway system was a Titanic labor, but it was completed. In the ten years ending in 1860 its progress was unexampled. In 1850, the number of miles of railway in operation was 8,588.79 miles, at a cost of $296,260,128, about the amount of the whole specie in the country. In 1860, the number of miles was 30,592.72, the cost $1,134,432,909, an increase in mileage of 22,000.08 miles, and of construction $838,192,781. And four-fifths of this increase of these lines and this expenditure were in the loyal States of this Union, that having been their proportion in pretty much everything but political power, in whatever has been accomplished for the prosperity and glory of this Republic. In this honorable career of railway enterprise, the State of Ohio has led the van, having about 3,400 miles of rails laid within her limits. Illinois comes next with 2,854, New York next with 2,600, Pennsylvania with 2,300, Michigan with 1,673, Indiana with 1,284, Wisconsin with 803, Tennessee 837, and Missouri with 657.

In comparison, then, with the actual amount of money expended on railways during the ten years mentioned, and the increase of mileage 22,000, the work of constructing a railway to the Pacific appears to be but a very simple and easy undertaking. If 22,000 miles of these new railways could be made in so short a time, and $900,000,000 readily found for their construction, can we not build one not the tenth part of the distance within ten years, and especially when the greater part of the money is advanced by the Government? In this view of the subject our greatest difficulties absolutely disappear.

On this point, indeed, we need not entertain a doubt. Nor am I without hopes that the road will be found shorter in its lines, much shorter than has been anticipated. The very best surveys we have were made under great disadvantages, and are by no means such as would answer for working plans. For a great part of the distance the difficulties are quite inconsiderable. It is in crossing the mountains we shall meet our crosses. If we could find a straight line between the 100° or 102 degrees of west longitude and the parallel of San Francisco, it would be but about 23 degrees of longitude in extent, or calculating the distance in miles, at from 49 to 50 miles to a degree, on the parallels of north latitude 41 and 42, so that by the actual measurement, the road would not be 1,200 miles in length, could be made in half the contemplated time, and cost perhaps not half the money. I trust that while the road is being constructed from the 100° westward, more deliberate surveys may be made with the purpose of shortening the route, and if a tunnel should be necessary at some point in the mountains, it would be no more than the French engineers are constructing at Mount Cenis, in the Alps between Sardinia and France.

The question which must occupy us first and most seriously, is the financial one. Can the money be had in quantity fast enough and large enough to construct the forty mile sections from time to time, so as to entitle us to the corresponding credits to be loaned by the Government. I have regretted that the shares were not placed originally at $100 each, instead of the present amount of $1,000. For a long time the public will not regard their investments in the stock as a source of immediate personal gain, though the day will come when they will lose their breathin racing after it as an investment. When you address

capitalists as such, you must show them a probability of the payment of interest within a reasonable time; when you appeal to patriotic minds, and the higher sentiments which overlook private interest for the sake of the public good, dividends may be left out of the inducements altogether. Let us explain for example. The city of New York with all the peculiarities incident to a compact, competing, heterogeneous population has some noble elements underlying all its faults, and in emergencies it is as sure as the foundations of the earth itself. So that whenever you can make a platform on which all can stand and all have an equality of nobleness, you may be sure it will be crowded by its citizens. I believe that almost every respectable inhabitant in New York whose labor or whose income is equal to one thousand dollars a year could be persuaded to subscribe at least one hundred dollars to this stock, with a perfect willingness to consider it as a donation if it was necessary, or to sink it altogether. It was done when the Erie Railroad some years since was on the brink of ruin, and the citizens of New York called on at public meetings and in their wards, freely gave their aid, and knew their money would never come back to them. So are there, as I have already said, thousands who will give $100 to the Pacific Road who are not able to give $1,000, and who are willing to go to that extent, but are unable to go beyond it.

* * * * * *

But to conclude, as we may obtain a better idea of a great structure by viewing it from a distance, than by looking up at it from its doorway, so of this project, we may best comprehend its grandeur by a slight change in our angle of vision. At the end of the present century it is calculated that the United States will contain a population of one hundred millions of people. What will be then the aggregate wealth of the nation no one has computed. Whatever it is now, will be then in the ratio of one hundred millions to twenty-seven, and equal to all the responsibility which in the course of events may fall upon it. We shall leave our descendants no petty patrimony of a crowded birth place and room scarce enough to struggle in, but a continent accessible to every son and daughter of industry, and without a limit to the energies of posterity. We must not think this so formidable an enterprise, nor be alarmed at undertaking it. If we leave posterity a war debt to pay off, we give them the means to do it with. There are no doubt many conservative and overtimid minds that shrink from the very idea. So there were when the great Clinton projected the Erie Canal, and was told that it would never be filled except with the tears of a ruined people. So in our own city of New York. The Croton water system had honest opponents, who predicted that it could never be carried into effect except at the risk of bankruptcy; men of prudence they were, who preferred the safer course of buying water from the tea pump at a penny a bucket, to the hazardous one of bringing a large country river into town. So of the Central Park, a monument of a refined and philosophic spirit, so crowded with grateful visitors, that an admission fee of half a dime each would produce a revenue of $200,000 a year.

The Panama Railway, which is a faint adumbration of the Pacific, was a wondrous undertaking. But its capital and cost of about $7,000,000 are now practically equal to $40,000,000, on which interest is earned regularly and large dividends paid, while a fund is accumulating for future distribution and profit. I do not pretend to foresee what will be the dividend value of the Pacific Railroad to its stockholders. But when even Europe may traffic with Asia more securely, with more rapidity, and with more profit than by any route in the old world by sea or land, and when the distance from London to Canton, as now navigated, is 18,000 miles, and from New York to Canton will be but 11,000, I perceive that New York has an advantage over London which must inevitably tell on the future of both cities, and end in the supremacy of that mart which commands the greatest trade. The business of this Pacific road will certainly enrich this country "beyond the dreams of avarice." What towns, what villages, what pastoral wealth will be added to those it already possesses, and out of these what new free States will emerge into life and greatness! What innumerable auxiliary lines will branch off from the main trunk to newly discovered and fertile plains, to happy valleys, and to the exhaustless mineral wealth which lies yet "unprospected" in the teeming Sierras and the gorges and golden sands of the rivers which sweep their bases. What is to prevent millions of oppressed Europeans from abandoning their ties to the soil which gives them black bread for their daily food, and demands all else for their rulers; what is to prevent them from a general hegira to the regions of gold, when the transit will be so safe, easy, and economical, and wages may be earned at every mile of the way? In the direct advantages to ourselves, we may estimate the time saved in crossing to the Pacific Ocean and going to the Eastern world, the saving of expense in freights, in insurance, in labor, the increased supplies of gold, the shifting of capital from Europe to the United States, the general distribution of means to live and to enjoy life, the advance of the useful and refined arts, the closer connection of the States, the consolidation of the principles on which our political fabric rests, and our entire independence of the *effete* European systems under which man has so long been kept down and "made to mourn."

All these results we may safely anticipate. The present troubles we are encountering, will prove blessings in disguise. In all ages and countries, principles important in their day bring forth their fruits at maturity. Waters long undisturbed become stagnant, and we should lay these trials to heart like philosophers, or what is best, like Christians. Many of the best elements in the American character, hitherto dormant and unvalued, are coming forth with an unsurpassed splendor. Fortitude, courage, persistency, self-denial, generosity, patriotism, ability, these have at last come to the front, where, I trust in God, they will remain, not again to be driven into the shade by political managers, who are forever "purring and mousing after petty schemes of political advancement."

Some of these qualities of the American character are showing their power in the development of this work we have in hand. We are to lay out and construct the longest continuous line of railway in the world. Its milestones, if I may be allowed an Irish license of speech, will be set along the parallels of longitude, which will be hourly passed by the trains, at a speed proportioned to their distance apart. Those travelers going west will enjoy a prolonged twilight, those coming east will have an earlier day. The journey will not be more than *we* shall have taken, who come hither from New York and are about to return. Finally, the revenue, the commerce, the crowds, the wealth, the prosperity, the national supremacy that this road will give birth to, overpower the most lively imagination.

Permit me to say in excuse for much I have said, I am not unfamiliar with the organization and construction of railways. I believe our treasurer, as well as myself, might cite one memorable example of a road with which we were connected which has fulfilled all its early promises, and never knew any serious impediments. But railroads can now be constructed so cheaply in comparison with their former cost, that I believe we can in this instance keep within the estimates. In England, as I have already stated, there are 137 new railway lines seeking legal existence from Parliament on the ground that they can now be built so economically, as to insure ample remuneration to the stockholders, and so it will be here. I can say with confidence, as I do with pleasure, that the selection we have made of a treasurer, is a great move in the right direction, one that will give the public the assurance, that the road is commenced in earnest, that it will be honestly managed and that it will have no serious financial difficulties which cannot be overcome.

FOR SALE.

1 30 Ton, Coal Burner, 18x22 Cylinder, 6-48 inch. Drivers, Price, $11,500.
1 20 Ton, Locomotive, 4-54 inch. Drivers, Price, $9,000.
1 10 Ton, do. Price, $6,000.

All 4 ft. 8½ inch. gauge. Superior Machines, now ready for delivery from shop. Apply to

OTTO AHLSTROM,

MANUFACTURER OF THE

LOUDON & AHLSTROM'S

PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to

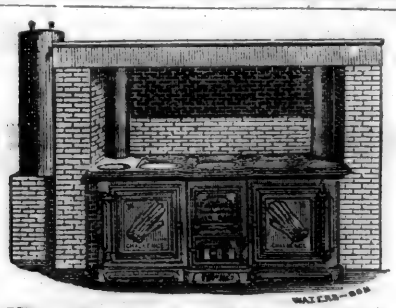
CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.



The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.

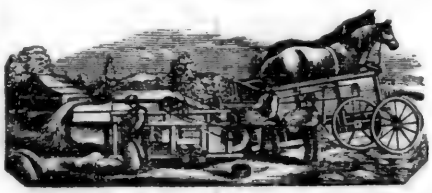
IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, October 18, 1862.

☞ Letters, Communications, Pamphlets, etc., intended for this JOURNAL, should be addressed to the *Editor and Proprietor*, JOHN H. SCHULTZ.

NOTICE.—Inventors and scientific men wishing to introduce valuable improvements to the notice of the public, particularly such as relate to Railroads, Locomotives and Steam Navigation, will henceforward receive due attention from this JOURNAL, on the receipt of communications containing proper descriptions of those improvements; a gentleman competent to the task being connected with the proprietor for this purpose.

Railway Humane Associations.

Associations for the temporary and permanent assistance of employees on Railways, who from accident or other emergency may be unable to perform their duties, and to provide a sum of money in case of death for the benefit of their families, have recently been formed in England with very beneficial results. There can be no doubt that the plan is a good one. There is no class of men who are more deserving of public favor than those in charge of Railway engines and trains, and the fidelity and endurance they show in the performance of their responsible duties entitle them to great consideration. We hope to be able to obtain an early account of the details of the management of these associations, and shall be happy to give them fully to our readers and as early as possible, in order to induce similar organizations in the U. S.

The Currency.—Paper and Gold.

Gold and Silver are no longer held at their established legal rates. Thus instead of our being able to exchange a silver dollar for 100 cents, we have to give 120 cents. A gold dollar cannot be obtained for less than 138 cents.

What is the cause of this? The answer given by political economists and bankers is, that there is an excess of paper currency, and the excess requires an addition in amount, to make it equal to gold and silver. They point to history and all experience to show that this is the relation which issues of paper always bear to them. In France, in England and Austria, the same results have been witnessed under similar circumstances. The appreciation of the precious metals invariably follows an excess in issue of paper money, and we are now witnessing the truth of this theory.

What is the condition of any country which is thus affected by the relative difference. Is it benefitted or injured by it. Is its prosperity determined by the amount of this disproportion, and the varying price of coin? Is a nation poor in proportion, as the commercial value of gold appreciates, and is a paper currency the source of the innumerable evils which financial writers attribute to it. We confess the subject is one of immense difficulty. All we shall attempt at this time is to present such facts in relation to the subject as are well known and indisputable, and leave our readers to draw their own conclusions.

It is not true that a metallic circulating medium ensures prosperity and freedom from disaster. California is a country abounding in gold. By its present constitution, banks are not permitted to exist. All the transactions in money are adjusted to a metallic standard. And the evils of a paper currency were by this arrangement supposed to be guarded against effectually. But what has been the practical result as regards its trade and commerce. 1st. Nearly all the gold it produces is exported to other countries. 2d. The rate of interest is from 2 to 3 per cent. per month, and is universally paid in all kinds of transactions, a rate of interest which in the Atlantic States would be deemed ruinous. 3d. In no part of the world have the fluctuations in the value of properties been so sudden, so disastrous, so enormous or more frequent. The adoption of the standard of gold and silver in California as a medium of commerce, has not therefore secured certainty in values, or given stability to transactions in which it has been exclusively employed. If any other medium is directly or indirectly employed, then the attempt to exclude it by the constitution has been a failure.

But is the general use of paper as a currency unwise, and to be regarded as deceptive. All great commercial nations have found it impossible to carry on their business without it. All warlike nations resort to it in cases of aggression or defence. Has this use been of a ruinous tendency, and subversion of their interests. On this point there has long been and now is a wide difference of opinion between the "bullionists" and the "practical men." In 1810 the famous British Parliamentary Committee, called the Bullion Committee, went deeply into the subject, and ever since it has been agitated with the greatest ability. Yet no positive absolute conclusion has been arrived at, in respect to many points of interest, and in this country, our own views are again in the crucible of experiment. It is a curious fact, noticed by Mr. Forster, one of the most eminent British writers on political economy, that the arguments put forth by the controversalists on both sides of the question are continually repeated, whenever the paroxysms in the money market call forth discussion. In 1797, the act restricting the Bank of England from paying its notes in specie, was attended by the exclusion of British goods from European markets and the effects of war affected the price of gold to a very great degree. So in 1811 gold was worth £20.2.7 per cent. in 1812 £25.16.8 in 1813 £29.4.1 per cent. The return to specie payments which was subsequently brought about by act of Parliment was gradual and difficult, for the Bank had actually increased its circulation in the face of the expected resumption, and it was not until 1821 and by the aid of further legislation that the Bank had placed itself in a position to meet all demands on it in specie. Yet during all this time, the

effect of high prices produced by the substitution of paper currency, was extraordinary. Fresh capital was applied to agriculture and in the very years we have mentioned according to McCulloch, there was a great extension of tillage and an adequate supply of corn raised for home consumption. The home trade of England was equally prosperous, and Adam Smith contended that it is always of superior productiveness to foreign trade, inasmuch as the capital which for example sends its manufactures to London and brings back English corn or manufactures to Edinburgh, is employed twice at home, whereas if it sends them abroad, it employs but one amount of capital at home. Thus while gold was at an enormous premium, the country was in full activity and every branch of business was flourishing. In this way the Government was enabled to enforce a system of taxation commensurate with its outlays. Speculation, says Mr. Foster, was excited, and the business operations of the Government were multiplied, though unnaturally, and by the general rise of prices thus occasioned, the markets became overstocked. Beyond all question then the issue of any excessive amounts of paper currency do for the time being, stimulate all kinds of business, and give an air if not the reality of prosperity.

The great problem with us to solve is this. How far may our Government in its present exigencies brought on by a dangerous and extensive rebellion proceed in the issue of paper currency. What amount will the business of the Country warrant, and how is it to become again equal to gold and silver. For the day will come when this paper will have to be redeemed, or it will not be worth any more than the material itself, and those who possess it in large quantities will be ruined. Necessity which knows no law, ignores all these considerations for the present, if the triumph of our cause can only be secured by this expanded currency. Property and life itself, all, every thing must and will be jeoparded, rather than that a tame submission to our enemies should take place, the result of which would be our political destruction. If we are to have no Country, or only place enough for us to lay our bones, then all these questions of money, currency, business and even life became secondary and of no account. Our ruin then will be inevitable. Our financial and economic interests will have disappeared.

There is still another view of the subject: the amount of business transacted within the United States is almost beyond the power of computation. To effect this an adequate currency of some kind is indispensable. It is gold, silver, bank bills, inland bills of exchange, banking checks and promissory notes. These are all currency and represent commercial and exchangeable values, and are recognised every where among us.

The amount of the gold and silver in the country, has never been adequate to this purpose. It has never been more than two hundred and sixty millions. We have therefore created banks, and trusting to their prudence, and to the knowledge of the fact, that one dollar of gold will ordinarily keep out three dollars of circulation, we have allowed the local banks to furnish the paper currency. But the volume of business has largely increased since the war, and the issue of one or two millions of dollars per day for the support of the armies and navy, has created an activity in trade of certain descriptions which is producing the most astounding effects. Contracts, foreign and domestic, are being extended between man and man, to an extent before unknown in this country. Every machine that can produce war materials, every thing that can transport it, is in motion, and even our foreign imports and exports are mounting up to sums equally surprising. How much currency then can the country absorb under these circumstances, and how much can it sustain? The reply is given by an esteemed cotemporary in this wise. Just as much as is required for the payment of the debts of the community in the process of being created and of being paid. How is this to be ascertained. Fortunately there is one method of doing so. The Commissioner of Statistics of the State of Ohio (an officer we should have in our own State,) has from the materials officially within his reach, and which are the result of statutory requirement, ascertained that the whole debts of Ohio, State, municipalities and people are actually as follows:

State debt	$14,250,000
Municipal debts	9,650 000
Judgment debts (outstanding)	18,832,020
Recorded Mortgages and liens	58,473,962
Railroad debts	56,000,000
Bank and Commercial debts	55,500,000
Private unnamed debts	10,000,000
	$222,905,982

This estimate may be considered nearly certain, for nine tenths of the items are ascertainable from the public records. If we apply this calculation to all the loyal states we come to a startling conclusion as to the extent of our transactions.

The population of Ohio is about one tenth of that of all the loyal states. If we take this as a guide, their aggregate debt would be $2,227,059,820, and this would be in the constant process of being paid, renewed, and varied. But we think this mode of ascertaining the amount, through a very safe one, is far within the truth. The City of New York furnishes more items of business debits and credits than all Ohio. The taxable property of this State is about twice that of Ohio, its banking capital twenty times as large, the discounts of our city banks, are alone ten times greater, and our foreign commerce, our enormous sales of stock at the exchange, and the operations at the clearing house daily, require a medium of exchange and balance payments which induce us to estimate the outstanding aggregate of mutual indebtedness in this city alone, running from day to day or on time contracts of all descriptions to be fully equal to the sum already named. For the easy payment of these amounts, there is not any currency which will compare with that of our present Treasury notes, a legal tender every where, no discount on them and unquestioned as yet for their security. We may see at once that in the absence of gold and silver, and the large amount of monies lying undisturbed in the Banks, waiting for the results of the future, an enormous amount of Government paper is necessarily absorbed and will continue to be. Some persons estimate that four hundred millions of dollars, or about half our present war debt, can be kept afloat, without costing the Government any thing more than the paper and engraving. Many judicious people therefore think that so far, the paper issues have been of immense commercial advantage to the Country.

Had the old financial system prevailed, and our Government persisted in making loans through the medium of the banks, the result would have been far different. The latter would have imposed their own terms, as they did during Mr. Buchanan's administration, by compelling the Government in one instance to pay 12 per cent interest. The Government bonds would have sunk in the market forty or fifty per cent, the moneys received for them would have been bank notes, at a discount out of their own respective States, and irredeemable in specie. After these banks had loaned all the money and bills to the Government they could spare, they would have been unable to assist their own regular customers, and on a return to specie payments, might not only have failed themselves, but ruined the mercantile community besides. Commerce returning would have found no assistance at their counters, and the crisis altogether would have been deplorable, and the injury universal.

On the other hand, the bold and yet the unavoidable policy of Mr. Chase, was to give to the country the credit and the circulation which would otherwise have been the advantage of the banks. These are now of necessity compelled against their will to be strong, in deposits and in specie, and restricted in their circulation, because there is a much better one to be had. They are therefore, perhaps involuntarily, in the very best position to resume specie payments, when the time shall arrive for it, much better than the Bank of England in 1825, which broke down in the operation and had to be helped through by Mr. Peel's act.

On the other hand, the Government having taken this wise step, has also proceeded to fortify itself against the necessities of the future by paying its interest in gold. This is substantially making the principal as good as gold. Those who invest for income are as well off by this arrangement as in time of peace. No capital of any funded debt in this country was ever paid off in gold in lump, or ever will be. A debt that pays its interest in gold, is the same as the gold itself. So then for the present at least, the finances of the country, and the means required for the support of the war are in a hopeful condition.

On the return of peace which we think is not far off, for brave and desperate as the rebels are, their means of resistance are almost exhausted, two events are likely to occur. One is that if the issue of paper proves to be in excess, it can be easily funded at a low state of interest payable in gold; the other is that a large portion of it will be retained in circulation voluntarily by the people as the best medium of exchange. When we shall have ascertained what is the first year's income from direct taxation, and what the revenue from the tariff will be, we shall be able to know exactly what to do to place our whole financial system on a solid basis. We think there need not be much disturbance of the general interests in bringing this about.

We are panic struck at the price of gold, which as yet has not advanced as suddenly as other commodities of which our supply is inexhaustible. No one is alarmed very much that the price of coal which is 100 per cent greater than it was six months ago, while gold after many fluctuations has yet risen but little more than one third. Nor must it be forgotten that our exports are increasing with commensurate strides, embracing many arti-

cles that have not hitherto been deemed advantageous for the purpose. The amount of gold exported the last year is only about what we have received from California, while the metallic deposits in our banks have been constantly increasing.

The truth is, this war has developed many facts which hitherto have escaped our own observation. Our immense military and naval resources, our genius for overcoming unexpected difficulties, our great mechanical and agricultural skill, our unwavering fortitude and determination, and our aptitude in turning evil into good, have never before been so remarkably exhibited.

An English writer of note computes the aggregate indebtedness of the Government and people of Great Britain to each other, at five thousand millions of pounds sterling, and says the evidences of these debts existing in a thousand ways are the actual property and the wealth of the country. There is something in this. If we are told that Mr. Astor holds five millions of bonds and mortgages, we assent to the proposition that he is a rich man, but what are these five millions after all, but five millions of other people's debts and promises to pay. What are the accumulations of our Savings banks but other men's liabilities on which the interest alone is demanded?

With good financial management, we see no difficulty ahead in carrying our national debt without any fear of a revulsion, and this very currency we have, while it is actively employed in the expanding business of the country, is actually furnishing the masses of the people with the means of paying their taxes, and placing themselves in a position to pay them as long as they are required. Millions of families have means at the present moment such as they never had before. We must therefore view these subjects in a philosophical manner, and endeavor so to shape our individual and public transactions, as to make a return to the former specie standards, as easy as our departure from them has been.

What particularly favors a hopeful view of the subject is the consideration, that those countries which have suffered most, in the end, from a paper currency are those which have had the least domestic and foreign commerce. In the time of the revolution we had none of either kind worth mentioning. Under the confederation, our duties were very low, our foreign traffic inconsiderable, our domestic trade nothing to speak of. Direct taxation, and that at the pleasure of the different States, was our sole and very limited resource.

Not so now, when our commerce with foreign nations is enormous, and our internal trade which is free is larger than that of any country on the globe.

Note.—Lord Liverpool was unquestionably right when he said "that the nation, and through it Europe, had been saved by the suspension of cash payments during the war, and but for it the armaments never could have been produced which brought it to a successful issue."

"Gold is itself an article of commerce, and like every other such article is subject to perpetual variations of price; and that from its being so portable, and valuable, and everywhere in request, it is subject to more sudden and violent changes of value than any other article in existence."

Alison's history of Europe, Part 1. New Series. Harpers' Edition, page 40.

St. Louis, Alton and Terre Haute Railroad.

The receipts of this road for five months, since reorganization, are:

	1862.	1861.
May	$112,383	$51,711
June	93,766	41,449
July	67,720	37,404
August	90,000	58,600
September	95,969	75,316
Total	$459,838	$264,480

Portland, Saco and Portsmouth Railroad.

The receipts and expenditures of this road for the fiscal years ending May 31, 1861, and 1862, have been as follows:

Receipts:	1861.	1862.
Passengers	$164,844 53	$144,418 72
Freight	66,589 32	49,111 48
Express	3,565 96	3,565 96
Mails	7,837 44	7,837 44
Sundries	2,511 74	2,550 15
	$245,348 99	$207,483 75
Expenditures:		
Maintenance of way	$33,588 25	$31,217 57
Motive power	38,293 11	35,246 29
Trains	13,572 00	13,068 10
Office establishment	12,457 33	12,034 95
Stations	21,035 15	10,209 10
Machine shop	700 66	1,207 39
Credit renewal fund	10,000 00	10,000 00
	$129,616 50	$112,983 40
Net earnings	$115,732 49	94,500 35
Dividend, 6 per cent	90,000 00	90,000 00
Surplus	$25,732, 49	$4,500 35
Do., per last report	83,597 36	64,882 26
Total surplus	$109,329 85	$69 382 61

From the surplus of 1861 should be deducted $38,000, which was equally divided between the Boston and Maine and Eastern Railroad Companies; also judgments in favor of Folsom and Perkens, amounting in the aggregate to $6,206 97. Deducting also $240 62 over estimate of net income for May, will leave above amount of $64,-882 26.

From the surplus of 1862, is to be deducted judgment in favor of Ruel Williams for cars, $1,264 07; cost of Saco Bridge, $16,673 25; sea wall at Portland bridge, $8,096 95—the total amount being $26,034 27; and the surplus remaining May 31, 1862, $43,348 34.

This surplus is invested in improvements, stock of materials on hand for the use of the road and wharf property.

The repairs on the wharf at Portland have been completed in a most thorough manner. The wharf and the buildings on the same are now in excellent condition, and will require but little outlay for several years. The station buildings, workshops, etc., at Portland are in good order and well adapted to the present wants of the road. The new building for passengers and offices proves to be a most important and desirable acquisition.

The City of Portland having allowed the company to fill in solid a portion of the flats so as to dispense with a portion of the wooden bridge leading into Portland over Fore river, they have during the past year, built a sea wall of about 1,100 feet in length, with strong stone abutments, and filled in solid with gravel.

The bridge over Saco river has been rebuilt the past year, the piers and abutments raised about nine feet, and the abutment on the south side of the river entirely rebuilt. The bridge is a strong, substantial wooden structure upon the Howe plan.

At Portsmouth a new bridge with a draw has been built over the river from Nibloe's Island.

All the bridges, both on the line of the road and at the farm and road crossings, have been kept in good and safe condition by repairs and renewals as circumstances required.

The track and road bed have also been kept in good repair by renewals of rails, chairs, sleepers and gravelling. The company have laid down the past year 125 tons of new rails, and between 5,000 and 6,000 new sleepers, and a corresponding number of chairs. About 80 tons of new iron with sleepers sufficient to lay it, are now on hand.

The equipment of the road, which is in the best possible condition, and ample for its present business, consists of 19 locomotives; 3 passenger cars; 2 baggage and mail cars; 41 eight-wheel, and 11 four-wheel platform freight cars; 39 eight-wheel and 3 four wheel box cars; 10 hand and 2 stone cars. The passenger cars for the through business are furnished principally by the Eastern and Boston and Maine roads.

Trial Balance, May 1.

This company was chartered by the Maine Legislature March 14, 1837. The construction of the road was commenced in 1841, and the whole line was opened for public use November 21, 1842. On the 28th of April, 1847, a contract was made between this company and the Eastern and Boston and Maine Railroad Companies, whereby the two latter took a perpetual lease of the road of the former agreeing, to maintain and operate the same, and to pay a rent to the lessors equal to 6 per cent. Under this contract the dividends have been regularly paid. They have, however, as will be seen, been earned by the road. The company have no funded or floating debt. The share capital authorized and paid in is $1,500,000. The cost of the road, including its connections with roads leading out of Portland, Portsmouth bridge, wharf and lands at Portland etc., is stated to equal the capital stock. The road is 51½ miles

in length extending from Portland, Me., to Portsmouth, N. H.

The annexed table shows the receipts and expenditures, exclusive of the amount carried to renewal fund (being $10,000 each year,) for each year from the opening of the road to May 31, 1862:

	Gross Earnings.	Operating Expenses.	Net Earnings.	Dividend	Per cent.
1843..	$31,319	$20,982	$10,337	$36.680	3½

The office of the Company is at Portland, Me. The officers are: Ichabod Goodwin, President; Eliphalet Nott, Treasurer; John Russell, Jr., Superintendent.

Census of New Brunswick.

The census of New Brunswick, taken last year, shows an increase in the population of 58,247, or 30.05 per cent in ten years. The total number is 252,047, the proportions of males to females being as 65 to 61. The ratio of foreign born—*i. e.* born out of the Province, is 20.86 per cent, who came from the following countries: from Ireland, 30,179; from Scotland, 5,199; from England, 4,909; from other British possessions, 8,721; from other countries, 3,594. The number of Indians is—males, 626; females, 587, the increase over 1851 being at the rate of 8.55 per cent. The number of colored persons is 1,581, a majority being females. In 1861 there were 8,721 births, and 2,390 deaths in the province. Average number to each family, 6.11 in 1851, and 6.26 in 1861.

The compilers say that there is a marked improvement in the School attendance during the last decade. The present Returns give 31,973 youths at school, being an advance of 69.24 per cent. over the attendance in 1851.

The total number of male inhabitants over 16 years of age is 73,586, of whom 70,339 are returned as employed in various avocations.

The Inhabited Houses have increased 27.80 per cent since the taking of the last Census, averaging one House for 7½ persons.

The places of Worship have increased 33.54 per cent since 1851, being 3½ per cent in advance of the increase of the population. There is now one Church for every 446 of the inhabitants.

The total value of Manufactures, including cloth made by farmers, was estimated in the Returns of 1851 at $1,269,626. In the present Returns they are valued at $3,130,898. Neither in the present Returns nor in those of 1851 is there included the value of ships built or lumber manufactured during the year.

The following is a comparison made by the Compilers between some of the more important descriptions of produce raised in Nova Scotia and New Brunswick, which in most cases is decidedly favorable to New Brunswick:

PRODUCE.		N. Scotia, 1861. Quantities.	N. Brunswick, 1861. Quantities.
Hay	Tons.	334,287	324,160
Wheat	Bushels.	312,081	279,775

Transportation of one Company's Car over the Road of another.

WHERE A COMPANY HAVE SOLE CHARGE OF A CAR, IT IS, AS TO SUCH CAR, A COMMON CARRIER. MISREPRESENTATIONS MUST BE LATENT IN ORDER TO AVOID SUCH A CONTRACT.

This action was brought by the Pennsylvania Railroad Company against the New Jersey Railroad and Transportation Company, for damages sustained by the plaintiffs by reason of the destruction of a car, which, in process of transportation over the defendants' road had been thrown from the track.

The case was defended on the ground, that a special contract had been entered into between the parties, by which the car was to be carried at the risk of the plaintiffs.

The case was tried at the Essex Circuit Court in the State of New Jersey, and the jury rendered a verdict in the favor of the plaintiffs and against the defendants for the sum of $2,534 60 damages. From this verdict the defendants appealed to the Supreme Court of the State of New Jersey, and asked for a new trial of the case, on the ground that the verdict was against the weight of evidence; that the special contract alleged was clearly established by the proof, and consequently, the verdict should have been for the defendants.

The court now refused to grant a new trial, and decided that, where a common carrier undertakes to carry an article for a compensation, the legal presumption is that he does it subject to his common law liability—and this presumption holds until disproved.

That where a railroad company takes a car, though on its own trucks, over their railroad and have the sole charge of it, it is as to the article transported, a common carrier. This is a different case from one where a party merely tows a boat and furnishes nothing but the motive power.

Where an article is delivered to a common carrier for transportation, he must exercise his own judgment as to the mode of carrying it, and he cannot escape liability by proving misrepresentations, unless they relate to matters *latent* in their character. The alleged misrepresentations in this case were as to the width of the gauge of the car, and the court held that the company, if deceived at all, were deceived with their eyes open; "the facts were patent — discoverable by inspection or by measurement," and, of course, either party to the contract could have satisfied themselves by an actual measurement.

The following is the opinion of the court rendered at the decision of the case.

POTTS J.—The contract, whatever it was, was made in May 1850, between Woodruff, as agent of the defendants, and Wasson as agent of the plaintiffs. The cause was tried in January, 1856, nearly six years afterwards; and, as the alleged contract rested in *parol*, the jury had to consider how far it was probable the lapse of time had added to the uncertainty of the testimony adduced. This consideration naturally weighed most strongly against the defendants, because the *onus* was upon them to establish the special contract they set up by way of defence.

Where a common carrier undertakes to transport an article in his line of business, the legal presumption is that he does it subject to his common law liability. And this presumption remains until it is overcome by positive proof of a special agreement. 6 *Howard U. S. R.*, 383.

Now in this case Woodruff and Wasson, the immediate parties to the transaction, are directly in conflict. Woodruff swears that he told Wasson the car was to go at his, Wasson's risk, and that Wasson assented to it; while Wasson as expressly and positively swears that he never made any such contract, as that it should be carried at the risk of the plaintiffs. It is true Mr. Counsellor testifies that he was present at a part of a conversation between Wasson and Woodruff, in which he heard the latter say to the former, that the company would take no responsibility at all; and heard Wasson reply, that he thought there was no risk—that he was going with the car, and was willing to run the risk; but what was said after this he does not know. And it is also true that Mr. Woodruff produced a written memorandum, which he said was made by himself, at the time, expressing that the car was to go at the risk of the party applying to have it transported. But some doubt was thrown over Woodruff's testimony as to the *time* when it was made, the memorandum being dated the 9th of May—while from Mr. Jackson's letter, informing the plaintiffs of the injury sustained by the car, it would appear that the accident occurred on the 15th.

This was the only *direct* testimony in relation to the special contract. And the jury, who saw the witnesses and heard the whole evidence, having weighed it, and come to the decision that it was not conclusive against the plaintiffs, I do not think we ought to disturb their verdict on that ground. It was the fault of the defendants, if they meant to make a special contract, that they did not put it in a more definite and certain shape.

The point was incidentally made upon the argument, that this was not a case of *carrying* at all, but was analagous to that of towing a boat upon a water navigation, where the party supplying the motive power does not receive the boat into their custody, or exercise any control over it other than such as results from the act of towing; in which case it has been held that the common law liability of carriers does not attach. Caton *vs.* Rumney, 13 Wend 387; Alexander *vs.* Greene, 3 Hill 9; Wells *vs.* Steam Navigation Co., 2 Comstock 207; Leonard *vs.* Hendrickson, 18 Penn St. R. 40. This doctrine has been denied or doubted in Smith *vs.* Pierce, 1 Louisiana R. 349; Adams *vs.* New Orleans Steam Towboat Co., 11 *ib.* 43; and Vanderslice *vs.* Steam Towboat Superior, 13 Law Rep. 399. But, however, the rule may be in cases of towing boats under these circumstances,

the analogy does not hold good in the present case. Here the defendants received the car to take over their road, and had exclusive charge of it, though they took it on its own trucks.

In the second place, it is argued that the Court below erred in instructing the jury, "that though the plaintiffs or their agent made misrepresentations to the defendants of the character and measurement of the car to be transported, yet that if such misrepresentations related to matters which might have been ascertained by the defendants by measurement and examination, that such misrepresentations cannot be held to be a deception."

It appeared in evidence that Wasson had stated to the employees of the New Jersey road that the gauge of this car was one and a half inches narrower than the road, whereas in fact it was two inches narrower; and also, that Cumming's cars, which had been taken over the road, were of the same gauge as this, whereas the plaintiff's car had a narrower tread than Cumming's, amounting to half an inch on each wheel, making an inch difference in the tread. And it is alleged that it was these misrepresentations of Wasson which induced the defendants to take the car on its own trucks, and which occasioned its running off the road.

But it is clear that if the agents of the defendants had measured the gauge and tread of the car before putting it on the track, or examined it when on, they would have discovered the precise extent of both gauge and tread. They were, so to say, deceived with their eyes open. The facts were patent—discoverable by inspection or measurement; and the Court said in substance, that if this was so, it was their own fault if they were deceived. In this there was no error.

Where an article is delivered to a common carrier for transportation, he must exercise his own judgment as to the mode of carrying it, and cannot shelter himself from the consequences of his common law liability by setting up misrepresentations, unless they respect matters which are *latent* in their character.

As to the third ground relied on, to wit, that it did not appear that the car was the property of the plaintiff at the time, I think the evidence was sufficient to warrant the verdict.

In my opinion the rule should be discharged.

Railroad Earnings--Monthly.

The earnings of the Michigan Central Railroad for September, 1862, were..... ....$295,956 29
Do., 1861.... .... 236,845 97

Increase.... ....$59,110 32

The receipts of the Housatonic Railway Company for September, 1862, were.....$25,271 71
Do., 1861.... .... 21,458 68

Miscellaneous	5,239 54	2,486 50
Total..... ....$112,484 82		$138,151 74
Increase..... ....$25,666 92		

The earnings of the Milwaukee and Prairie du Chien Railroad in Sept., 1862, were..$109,660 82
Do., 1861.... .... 134,729 00

Decrease $25,068 18

Total receipts for the year up to Sept. 30, 1862..... ....$825,258 06
Total receipts for the year up to Sept. 30, 1861.... .... 777,353 24

Increase.... ....$47,904 82

The earnings of the Chicago and Northwestern Railroad for September, 1862, were..$101,059 98
Do., 1861.... .... 87,166 91

Increase. $13,893 07

The business of the Chicago, Burlington and Quincy Railroad, for September, has been:

	1861.	1862.
Freight..... ....$136,589 74		$166,095 04
Passengers....	31,614 79	33,646 55
Mails and miscellan's..	2,450 79	1,954 33
Total..... ....$170,655 32		$201,695 92
From May 1	533,607 08	673,207 92
Total for 5 months....$704,262 40		$874,903 81
Increase do.... ....$170,641 44		

Between Chicago and Burlington—210 miles:

	1861.	1862.
Freight..... ....$159,157 77		$192,568 14
Passengers.	37,768 85	39,584 17
Mails and miscellan's..	2,808 15	2,313 00
Total.... .....$199,734 77		$234,465 31
Increase $34,730 54		

Between Quincy and Galesburg—100 miles:

	1861.	1862.
Freight.... ....$15,996 96		$23,204 86
Passengers....	6,801 45	11,100 90
Mails and miscellaneous	1,691 03	2,045 33
Total..... .....$24,490 44		$36,351 09
Increase.... ....$11,860 65		
For 310 miles $224,225 21		$270,816 40

Railroads in Michigan.

We have now in actual operation, within the State of Michigan, upwards of one thousand miles of railway, all of which is owned by six companies, viz: the Michigan Southern and Northern Indiana, (having a total length, with branches, of 549 miles,) the Michigan Central, (284 miles,) the Detroit and Milwaukee, (188 miles,) the Grand Trunk, (Detroit branch 57 miles,) the Flint and Pere Marquette, (35 miles,) and the Amboy, Lansing and Traverse Bay, (30 miles,) making a total of 1,143 miles now in working order.

The Trunk lines leaving the city of Detroit are, the Michigan Southern, Michigan Central, Detroit and Milwaukee, and Grand Trunk, all of which are doing excellently well. The Michigan Southern road has direct connections with Chicago, St. Louis, Milwaukee, Cincinnati, Toledo, Cleveland, Buffalo, Philadelphia, New York, Washington and Baltimore, besides its numerous branches diverging in all directions from its main line. At Buffalo and Dunkirk it affords a choice of routes to the eastern traveler, and along its whole line affords the most splendid scenery.

The Central road is regarded as the great avenue of travel between Chicago and the East, *via* the Great Western and Grand Trunk Railways of Canada, and is a connecting link in the great chain of railways from Portland, Maine, to St. Louis, Missouri.

The Detroit and Milwaukee road connects in this city with the Michigan Southern, Great Western, and Grand Trunk roads, forming the most direct route for Milwaukee and the great Northwest.

The Grand Trunk Railway offers to the Eastern traveler the inducement of an all iron rail route, with the most magnificent scenery that the world affords—at least the grandest through which a railway has yet been constructed.

The Great Western Railway, although not within the limits of the State, is properly one of the railroads of Detroit, as all its western connections are made in this city, and the principal part of its western traffic comes from this State.

The Flint and Pere Marquette, and the Lansing and Traverse Bay Railroads are interior lines, having a purely local business, at present, though destined, at some future day, to form a connecting link in a grand system of railways that is to develope the internal resources of our glorious State.—*Detroit Com. Advertiser.*

Shipments of Flour to Liverpool and Results.

The following is a regular commercial statement of a supposed transaction in flour, made up by an eminent house in the trade, and will serve as a guide to those persons who are desirous of understanding the details. The only corrections to be made are in the prices charged for the flour per bbl., and the freights, which, of course, change with the market from time to time.

Pro forma.

Invoice of 1,000 Barrels Flour shipped by ——— per ——— for Liverpool and consigned to ——— for sale on their account.

1,000 bbls. Flour, (say) at $5 50 per bbl..$5,500 00

CHARGES.

Brokerage, 3c. per bbl. $30 00
Cartage, 5c. per bbl. 50 00
80 00

$5,580 00

At 130 per cent. £965 15 7.
E. & O. E.
New York, July, 1862.

Pro forma.

Account sales of 1,000 Barrels Flour received July ——, 1862, ex ——— from ——— sold on account of ———

By ———

Terms 3 months.

July 6, 1862. By 1,000=990 bbls., at 29s. per 196 lbs., ex Quay £1,435 10 00

(If the above be stored the charge for cartage and storage for first month will be about 5 d. extra.)

American Railroad Journal.

Saturday, October 18, 1862.

Stock and Money Market.

Since our publication of last week, the Stock and Money Market has been excited almost beyond description. That mysterious body of men who operate in Wall street and its vicinity have become an Estate in the land, and their operations from day to day affect the value of every man's possessions! The well known results of a paper currency are being realised in this country to an extent never dreamed of, and the fear of a long war, to become, like some European wars, one of suttlers and contractors, has its full influence on wary capitalists. It is according to the views these persons take for the time being, whether correct or not, that prices go up or down. Thus gold is esteemed the most valuable of all commodities, and next to it, such others as most easily are convertible into it. We have therefore many anomalies to record, which no one can explain.

The advance on stocks is not general and in proportion to that in gold, nor in Government securities, nor State.

Railway shares, particularly of those companies which are doing well, are handsomely appreciating, and if their Managers seize the opportunity of paying off their old debts, or of greatly curtailing them, their future will be one of decided prosperity.

Old demand notes keep pace with gold very nearly, being sold at 131 on Wednesday, thus showing the fact, that Government paper re-

ceivable at the Custom House for duties is as good as gold. It would then seem quite practicable, if he has the power, for Mr. Chase by a stroke of his pen to knock gold down to a low figure, and this by merely saying that all government notes of certain denominations should hereafter be received at the Custom House. The nearer he can bring Government paper to an equality with gold, the easier he can pay his interest in gold. So also the City Banks by putting out ten millions of gold at 135 to 40 as the price ranged, might make an enormous profit for their institutions, knock down the price one half and buy in again with currency at their leisure. Such at least are opinions of some of our ablest financiers. So of Exchange.

There must be an enormous profit somewhere. Flour is in demand abroad at a fair price, and brings cost and charges at least, if not a large profit. The shippers are paid in sterling and can draw on the proceeds at a rate which must pay immensely. This may be the secret of the large exportations from this port, and the secret also of our large importations. The actual demand for gold abroad, as due on the balance of trade (if any) is fully met by the California receipts, so that we do not wonder that the wisest bankers and merchants are "at their wits ends and stagger to and fro."

Money is easy and at low rates to good borrowers, and as hard as ever to those who do not write on gilt edges. At this moment, stocks are ruling lower than they did a week ago, the speculators finding other "metal more attractive" for the present. U. S. 7.30, the interest of which is paid in gold remains at about 105, and to our surprise, for it is evident that the holders by selling their dividends at 140 and buying in more of the 7.30 at the ruling rates, may compound their interest in an astonishingly rapid manner. We have no doubt but that a reaction in the specie market is not far off, unless all the rules of political economy are worthless. If specie flows where there is a demand for it, it must return here because we are able to pay for it in other commodities as good as gold. And if every capitalist is going into specie speculations, the business will by and by be overdone. Practically and in the every day business of life, its absence from general circulation is not felt in any other form than its convenieuce. Stamps are very passable currency but they wear out faster than even a three cent piece.

The following quotations are in add ition to those in the tables on the preceding page:

Improvements in Steam Engines.

Improvements in the forms of motive power have been very numerous of late years, and some of them would seem almost to have reached perfection. In the Marine Engine there have been considerable modifications of form, resulting from the general adoption of propellers instead of side wheel steamers. Thus the engines required to turn the screw must have high velocity, the crank axles have very different positions from those they had formerly, the space occupied by them in steam vessels is very much contracted, and the machinery more compact, is become more solid and strong. The beam, which is still retained in some of our own finest vessels is discarded abroad, direct action engines being adopted in preference. In the oscillatory engine there is no connecting rod, in the trank engine there is no piston rod, and the use of a double piston rod economises space for itself and the connecting rods. So economy of room is more studied in the position and form of the condenser and pumps. When the screw was found practicable after the famous experiments of the Steamer Archimedes in 1839, t began to be rapidly substituted, and is likely to upersede side wheels altogether. Most assuredly it will, on the ground of economy alone, as soon as the relative speed oi the two propelling forces becomes finally equal. But for this difference of speed, particularly in smooth waters and in rivers, very few side wheel steamers would even now be built. At first the revolution of the screw shaft was produced by gearing, but it is now driven by the engines themselves. The size and power of steam engines have also been greatly increased within a few years. In stationary engines considerable improvements have been latterly made, particularly in the condenser, and the application of the principle of expansion.

With regard to Locomotives, in the construction of which our machinists have no superior, the latest innovation is in the use of injectors in place of feed pumps, the supplying quick or Express trains with water without stopping, which is said to be successfully practised on the London and North Western Railway. The Austrian engineers are attempting to gain high velocities for their engines by using four cylinders instead of two, and by this also to secure a more equal application of power to the axle.

We intend to prepare in a popular form a series of articles on the various improvements connected with Railways, which have been brought to light at the British exhibition, as soon as we receive the full descriptive catalogue from our London agent.

Movements of Specie.

The monthly statement of movements of specie prepared by the *Journal of Commerce*, shows a continued decrease in the foreign exports, and a favorable increase in the receipts from hoards and from California.

	Rec'd from California.	Foreign Imports.	Rec'd from Hoards.	Foreign Exports.
Jan...	$2,199,533	$163,658	$921,794	$2,658,274
Feb....	2,250,795	62,007	3,142,406	3,776,919
March..	1,846,752	89,327	3,554,154	2,471,233
April...	1,834,117	26,152	3,553,406	4,037,675
May....	1,999,771	110,383	5,781,477	5,164,636
June...	1,911,099	61,023	6,382,492	9,867,614
July....	1,961,468	219,001	6,781,868	8,067,337
Aug....	2,070,198	92,703	1,619,631	3,713,532
Sept....	2,541,918	121,318	3,876,683	3,085,919
Total..	$18,655,651	945,577	35,593,911	42,843,139

Specie in Banks and Sub-Treas'y, Jan. 1, 1862	$29,030,000
Rec'd from California since Jan. 1	18,655,651
Foreign Imports	945,577
Rec'd from Hoards, etc	35,593,911
Total supply	$84,225,139
Foreign exports	42,843,139

Total in Banks and Sub-Treasury, September 1, 1862	$41,382,000
September 1, 1861	53,400,000
September 1, 1860	25,400,000
September 1, 1859	23,855,000

The above presents some notable themes for comment. The fact that the balance in Banks and Sub-Treasury, which was only twenty-nine millions on Jan. 1st, has increased now to upwards of forty-one millions, while nearly forty-three millions have been exported, is certainly a subject of surprise and congratulation. It will also be seen that the amount brought into the city from outside hoards since the beginning of the year has been nearly twice the amount received from California.

Interest and Dividends.

Duncan Sherman & Co;, will pay the San Francisco City water coupons, due Oct. 4, on presentation at their office.

The Treasurer of the Rome, Watertown and Ogdensburg Railroad Company gives notice to the bondholders that the 3 per cent Government tax deducted from coupons due Sept. 1, 1862, will be refunded at the Agency of the Company, on presentation of the bonds.

The Norwich and New York Steamboat Company have declared a dividend of 10 per cent. The Norwich and Worcester Railroad Company owns $200,000 of this stock.

The City Controller advertises that the 1st of November interest will be paid by the Chamberlain at the Broadway Bank. The transfer books closed on the 15th inst.

The Central Railroad Company of New Jersey have declared a quarterly dividend of two and a half per cent., clear of the government tax, payable on the 15th instant.

The coupons of the Brooklyn Central and Jamaica Railroad Company, due Oct. 1, 1862, will be paid at the Brooklyn City Bank.

Petroleum and Tuepentine.

American Petroleum oil has recently risen in the London market, from $45 per ton to $90, in consequence of the quantity of *turpentine* extracted from it. This must be a late discovery and will have a sensible effect on the price of the article here. We must say we doubt the truth of this statement as to the production of turpentine from petroleum, though when we resolve them into their original chemical constitutents, they re ot far apart.

The National Finances.

The receipts and expenditures of the United States for the quarter ending June 30, 1862, exclusive of trust funds, are as follows:

RECEIPTS.

From customs	$18,930,000
Direct tax	795,000
Sales of public lands	49,000
Miscellaneous	259,000
Three years' bonds, at 7 3-10ths per ct.	13,825,000
Five-twenty year bonds, act of Feb. 25, 1862	13,990,000
Stock for Washington and Oregon war debt	198,000
U. S. notes per acts of July 17, and Aug. 5, 1861	30,000
U. S. notes per act of Feb. 25, 1862	98,000,000
Certificates of indebtedness, acts 1st and 17th of August, 1861	44,252,000
Temporary loan, act of Feb. 25, 1862.	46,187,000
Total	$238,000,000

EXPENDITURES.

Civil, foreign intercourse and miscellaneous	$6,028,000
Interior—Pensions and Indian	700,000
War	160,034,000
Navy	14,800,000
Interest on public debt, including Treasury notes	3,969,000
Pay of Treasury notes issued by act of December 5, 1857	101,000
Pay of Treasury notes, issued by act of March 2, 1861	792,000
Redemption of United States notes, issued by act of July 17, 1861.	580,000
Reimbursement of temporary loan, by acts of Feb. 25 and March 17, 1862.	7,137,000
Deduct excess of repayments above expenses for pay of Treasury notes, per act December 17, 1860	33,000
Total	$194,000,000

Population and Property of San Francisco.

There are evidences without number of the increase of population, of permanent improvements, and of the rapid growth of the material wealth of San Francisco.

By the Assessor's roll, in round figures, the taxable property in San Francisco, is estimated thus:

Real Estate	$ 35,500,000
Personal Property	11,500,000
Mining Stocks	2,500,000
Mortgages	8,800,000
Vessels	1,600,000
Total	$59,900,000

But when the Board of Equalization concludes its labors, this aggregate will be reduced, it is thought by some million of dollars. So that the corrected aggregate will be within one hundred thousand dollars of fifty millions. The total annual assessments for the past three fiscal years, ending June of each year, are as follows:

1850-51	$21,621,214
1856-7	30,368,254
1862-3 ..... estimated	50,000,000

The respective increase of men, women, children, Chinese and negroes, during the year, may be seen by the following tables:

1861.		1862.	
Men	30,500	Men	32,500
Women	14,783	Women	18,000
Children	23,000	Children	28,000
Chinese	3,130	Chinese	3,000
Negroes	1,800	Negroes	1,800
Float'g population	10,000	Float'g popul'n.	7,000
Total	83,213	Total	90,000

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Oct. 3rd, 1862, was as follows:

Passengers	$27,052 87
Freight and live stock	33,790 91
Mails and sundries	1,374 61
	$62,218 39
Corresponding week of last year	54,135 38
Increase	$8,083 01

The receipts of the Grand Trunk Railway of Canada for the week ending September 27, 1862, were:

Passengers	$39,363 80
Mails and sundries	2,962 10
Freight and live stock	49,318 41
Total	$91,644 31
Corresponding week of last year	80,674 81
Increase	$10,969 50

The Galena and Chicago Railroad earned the 1st week in October, 1862 ..... $44,761 26
Do., 1861 ..... 47,258 52

Decrease $2,497 16

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week in October, 1862, were $31,248 85
Do., 1861 ..... 34,610 06

Decrease $3,361 21

The Chicago and Northwestern Railroad earned in the 1st week of October, 1862 ..... $22,447 55
Corresponding period, 1861 ..... 20,473 48

Increase $1,974 07

The earnings of the St. Louis, Alton and Chicago Railroad for the 1st week in October, 1862, were $26,949 59
Do., 1861 ..... 21,560 99

Increase $5,388 60

The Illinois Central earnings for the 1st week in October show an increase of $25,000.

The Michigan Central Railroad earned in the 1st week of October, 1862 ..... $67,073 50
Do., 1861 ..... 64,447 86

Increase $2,025 64

The Cleveland and Toledo Railroad earned the 1st week of October, 1862. ..... $24,982 00
Do., 1861 ..... 19,266 00

Increase $5,716 00

The Michigan Southern Railroad earned for the 1st week of October, 1862. ..... $64,639 00
Do., 1861 ..... 57,630 00

Increase $7,059 00

The Chicago and Rock Island Railroad earned the 1st week in October, 1862. ..... $35,218 00
Do., 1861 ..... 36,919 00

Decrease $1,701 00

Atlantic and Great Western Railway.

This great work is being pushed rapidly forward. Mr. Kennard, the Engineer-in-Chief, in a late letter to the London bondholders, expresses the opinion, that he will have the whole line completed to Akron and the oil wells by the end of October. Two thousand men are at work upon the road between Meadville and Akron, and the track between Meadville and Corry is more than half completed. Two first class locomotives from Danforth, Cooke & Co., of Paterson, New Jersey, have just been placed upon the line at Ravenna, to assist in laying the track eastward.

The completion of this road will tend greatly in relieving the pressure of eastern bound freights at Cleveland. Should the managers of this road see fit to adopt the suggestions made in this paper many years ago, of changing their route from Akron to this point, by purchasing the Akron and Millersburg and Wilmington and Zanesville roads, and building the links between Millersburg and Zanesville, and Morrow and Cincinnati, they will have one of the most important and independent routes to the east that has yet been built, for by so doing they tap the finest agricultural portions of Ohio, which have heretofore found outlet by means of broken and disconnected roads to Philadelphia, Baltimore and the Ohio river, and render valuable two roads that are now comparatively worthless for the want of proper and independent termini.—*Cincinnati Railroad Record.*

A Railroad Battery.

The Jackson (Tenn.) correspondent of the Chicago *Times* gives the following description of a new railroad battery which has been constructed:—

The iron clad railroad battery is constructed upon a platform car thirty feet long by eight wide. The sides and ends are first constructed of two and one-half inch oak plank, upon which boiler iron is riveted. The sides lean inward sufficient to glance a ball upward; one end is perpendicular, and the other pitched to a sharp angle. The sides are two and one-half feet high. In the centre of the car is the circle upon which the gun carriage revolves, and the whole arrangements of the gun designed with reference to counteracting the recoil at the firing.

A 6 inch James rifle cannon is mounted so as to sweep in every direction, and it has already been tested with shell and ball sufficient to prove that all contingencies have been provided for.

Others, similar to this one, but designed to carry heavier guns, are about being constructed. This one was constructed at the railroad shop here, under the immediate superientendence of Captain Trecilian, of General Logan's staff.

I also understand it is the purpose to construct bullet proof cars, with port holes for rifles, to accompany these batteries. When they are all completed, and a set of them placed at the ends of each train, or for special purposes are placed at each end of an engine, it may be calculated that attacks on trains or railroad bridges are about over.

The Tax on Deeds.

The following correspondence explains itself:

150 NASSAU STREET, N. Y., Sept. 30.

SIR:—Will you please inform me whether under Schedule B certificates of acknowledgment on deeds and other instruments require a ten cent stamp.

2. Whether the form of verification of an affidavit "Sworn before me," &c., is a certificate, and requires such stamp.

3. Are assignments of mortgages included in the tax list under the term mortgages, so as to pay on them the same rates as on mortgages?

Your most obd. WM. HENRY ARNOUX.

To Gov. Boutwell, Comr., &c.

(Answer.)

TREASURY DEPARTMENT,
OFFICE OF INTERNAL REVENUE,
October 7, 1862.

SIR:—The ordinary acknowledgment by the grantor before a justice of the peace or a notary public is a part of the deed and does not require a separate stamp; but a certificate that A. B. was a justice, etc., would require a stamp.

The form of affidavit, "Sworn, etc.," is not a certificate under the law and therefore requires no stamp.

I think the mere transfer of a mortgage does not require a stamp. Your obedient servant,

GEO. S. BOUTWELL.

TO WM. HENRY ARNOUX, Esq.

Real Estate Sales and the Tax Law.

The following correspondence in relation to the operation of the tax law upon real estate is important:

No. 106 BROADWAY, NEW YORK, Oct. 9.

To the hon. the Commissioner of Internal Revenue:

SIR: Referees have many sales of real estate under foreclosure proceedings where there is a prior mortgage upon the property: and very often the amount bid is so much "over and above the prior mortgage," and in the referee's deed is inserted the amount of the bid with the words, that "the property is conveyed subject to said prior mortgage."

Supposing the fact to be that a referee sells a lot of ground for $6,500, subject to and over and above prior mortgage of $5,000. The deed names $6,500 as the consideration money, and also contains an announcement that the property is sold subject to said prior mortgageof $5,000. Now I desire to know whether the samp duty is to be paid on the amount of the bid only (viz: $6,500), or on the amount of the bid, including the the mortgage, (viz: $11,500).

Again. By section 76 of tax bill it is enacted that there shall be levied, collected and paid on all sales of real estate * * * at auction, a duty of 1-10th per cent. on the gross amount of such sales—provided that no duty shall be levied under the provisions of this section upon any sales by judicial or executive officers making auction sales by virtue of a judgment or decree of any court. I desire to be informed:

First—Whether the duty is to be charged on the amount of the bid, or on the amount of the bid including amount of the prior mortgage.

Second—Whether "referees" appointed by the court to sell in foreclosure or partition suits are considered by you as judicial or executive officers.

By giving this your immediate attention you will much oblige. Yours, respectfully,

CHAS. H. HIENAU.

REPLY OF COMMISSIONER BOUTWELL.

TREASURY DEPARTMENT,
OFFICE OF INTERNAL REVENUE,
WASHINGTON, October 13.

SIR: Your letter of the 9th instant is at hand. You ask if a piece of ground is sold subject to a mortgage on what amount must the stamp duty be paid. I answer, upon the amount of the consideration named in the deed—any fraud in naming the amount would invalidate the instrument.

Your second inquiry upon sales of mortgaged real estate at auction is upon the same principle. The tax on the sale will only be required on the amount bid and paid over the mortgage.

I am of opinion that "referees" appointed by the court to sell in foreclosure or partition suits cannot be regarded as judicial or executive officers.

Very respectfully,

GEO. S. BOUTWELL, Commissioner.

CHAS. H. HINNAU, Esq., 106 Broadway, N. Y.

Finances of Boston.

The annual report of the City Auditor, for the year ending April 30, 1862, has been published:

The balance on hand and in the treasury at the commencement of the year was		$132,966 61
The receipts on city account during the year were	4,175,212 76	
The receipts on county account were	30,418 80	
Making a total of		$5,038,598 17
The payments were:		
On city account	$4,157,707 78	
On county account	168,661 14	
		$4,326,368 92
Leaving a balance in the treasury at the close of the year of		$712,229 92
The whole debt of the City, funded and unfunded, at the close of the financial year, April 30th, 1862, was		$9,095 037 65
Of which the Water Works owed	6,143,172 32	
Leaving the debt of the City proper at that time		$2,951,865 33
The amount last year was	2,799,368 81	
Net increase		$152,496 52
The payments have been the following:		
On City Debt proper		$195,792 00
On Water Debt		442,500 00
		$638,292 00

To meet the debt we have a cash balance to the credit of the Committee on the Reduction of the City Debt, amounting to $429,484 00, and Bonds and Mortgages to the amount of $358,345 20. Total, $737,829 20.

The debt has increased $897,912 37 during the last 10 years.

The amount borrowed this year was $775,000, of which $200,000 was expended for school purposes, $223,000 for street purposes, $160,000 for war expenses, and $100,000 for new city hospital.

The expenditure for the schools and schoolhouses was $574,567, against $628,549 the previous year. There was an increase in the current expenses of the schools, but less expenditure for new school-houses.

For the first time there has been an excess of income over the cost of carrying on the Water Works and the extension of the same. This excess has been $2,132 35. Dudley Pond, capable of furnishing a supply sufficient for the consumption of the city for about three weeks, has been connected with Lake Cochituate at an outlay of $14,000.

From the tables accompanying the report we learn that the following sums were paid out for the objects specified: Maintaining the Fire Department, $93,567; Fourth of July celebration $15,-254; Public Library, $25,012; Police, $253,235; Public Institutions, $116,939; paving, grading, repairing and widening streets, $386,861; care and improvement of the Common, $3,639; exterminating dogs, $224; City Committees for various purposes, and entertainment of strangers of distinction, $5,845; carriage hire for committees and officers of the City Government, $1,340; lighting streets, $141,774; Overseers of Poor, $67,139; families and dependents of volunteers, $129,309; steamer Henry Morrison, $9,442; clothing and equipments for troops, 45,726; subsistence while at forts, $20,603; subsistence and entertainment of military prior to their departure and while on their way to the seat of war, $10,533, of which $4,300 was for Maine and New Hampshire regiments; expenses of Mayor, with members of the City Government, to New York, Washington and Fort Monroe, $2,000; miscellaneous military expenses, $11,288.

The Effect of a Redundant Currency upon Prices at the Stock Exchange.

The most important question now engaging the attention of the commercial community is unquestionably that of the *currency*. During the past week the price of gold advanced largely, selling, at one time, at 129½, with a tendency, apparently, to a still higher price. Numerous causes are assigned for the advance, but the prevailing opinion is, that it is due to the demand for export, and to apprehensions as to the future, which have induced several of our leading importers to lay in large stocks. This appears to be a very obvious solution of the question, but we still insist that the increased price of gold is but another name for the inflation of the currency. We are trying the experiment of substituting for a costly currency, one which really cost nothing in the outset, (except the expense of issuing it) to the party putting it in circulation. The difference of price is simply one of value. The phenomenon exactly expresses the law, or fact. We are aware that few will accept so simple a solution of the matter—previously expressed opinions, or national pride, leading us to accept, gladly, any cause but the true one, which is a debasement of the currency by the voluntary act of Government and the people—a debasement which must continue to increase, and to add to our perplexities, till we retrace the step we have taken, and adopt some remedy for the errors already committed.

The remedy is, of course, the retirement of the irredeemable currency—the Treasury Notes. Banks will not make their own obligations equal to gold and silver, so long as they hold the obligations of Government which are legal tender in all contracts. So long as Government keeps its notes afloat, the immunity of the Banks is complete. They, consequently, are co-adjutors of the former in increasing the inflation. For all this there is but one remedy, and that not immediately available. Government must make it an object for the holders of its notes to convert them into its long bonds. This is the only way in which they can be retired, at least for a long time. Provision is, in fact, made for such conversion into *five*-year bonds bearing six per cent. interest, but the early maturity of thes e will prevent conversions to any considerable amount.

The principal inconvenience that has so far resulted, has been in the import trade, caused by the rapid advance in exchange. Importers who have sold their goods at 10 per cent. profit, have, in many instances, lost more than their profits in the rapid advance in foreign bills, by means of which their payments were made. The effect of the present enormous premium on such bills is undoubtedly to check importations, and may be an advantage to us in the present state of affairs. Economy in all branches of expenditures is the first duty of our people, and the more completely we can

supply, by our own industry, our wants, the better. Still what we gain on the one hand, may be more than lost on the other. We shall find it no easy task, with the most favoring circumstances, to get back again to a sound basis. We have so far seen only the agreeable side of the picture.

For the present the inflation must go on. Its effects are, in fact, every day becoming more and more visible. It has been a matter of surprise that these have been delayed so long. Real property is everywhere low, even measured by the standard of rents or income. The ordinary necessaries of life have not yet felt, to any considerable extent, the inflation; the advances in prices where they have taken place, being chiefly due to other causes. So with prices at the Stock Exchange, though the effect of a redundant currency is probably more conspicuous there than anywhere else. Cheap money always acts first upon the Share Market, because it stimulates speculation. The advance of prices in the Stock Exchange has undoubtedly been considerably accelerated by the cause referred to, but this advance, in a great majority of cases, has not carried Securities to the figures at which they stood for a long time, with a specie basis, and with money very active at seven per cent. A good six per cent. is worth par, but a large number of first-class seven per cent. railroad bonds are, to-day, selling at such figures. They are regarded as high, simply from the depressed prices at which they were selling a year or two ago. Within the present year, Erie 5ths, sold at 65. Other securities equally valuable sold at vastly lower rates. The advance in all has been enormous, but in many cases has not reached figures that would be reached, in six months more, with a currency equivalent to gold and silver. In other words, the Share Market has hardly begun to feel the full effects of our depreciated currency. At the specie standard, New York Central is selling at 75, fifteen or twenty per cent. below its general range in times past. It is an unquestioned six per cent., and is worth par, in gold. First class seven per cent. bonds are worth, in the long run, from 115 to 120; eight per cents from 125 to 130. Yet compared with a specie standard, the best of these securities are selling at from 70 to 80!

These well established facts prove that the inflation in the currency has hardly begun to exert its proper effect upon prices, particularly at the Stock Exchange. It has tended to accelerate an advance in prices which was inevitable, and which, with a currency the equivalent to specie, would be still low. Without such inflation, the present prices would have been reached in a short time, and would only express the actual value of the securities to which they referred. Confidence is not only being steadily restored in the perpetuity of our political institutions, but in the intrinsic value of Railway property. The increase in the earnings of our roads is beyond all precedent. The Erie Railroad earned the past year $7,700,000 against $5,600,000 for 1861,—an increase equalling nearly 40 per cent. The advance in the value of the securities of this Company, great as it has been, has only kept pace with its increased earnings. So with other roads, almost without exception. Prices so far do not in a great majority of cases exceed values. Such being the case a great advance upon those at present ruling is inevitable—in other words, prices have yet to feel the inflation. This is not a matter of theory, or fancy, but a simple question in physics. Military reverses will also accelerate the advance, as the currency must be increased in ratio to the Governmental expenditure. Such is in fact the conviction of every intelligent person. As the currency becomes distrusted, every holder of paper money will become all the more eager to convert it into securities that have a substantial value, and which will not mature till after specie payments will be resumed. The Stock Market, consequently, instead of having culminated under the influence of an excessive issue of paper money, has hardly begun to feel such a stimulus, and must, for all dividend paying securities, show a further advance, approaching in some degree the present premium paid for gold.—*Hallett's Financial Circular.*

The Clearing House System.

As a Railway Clearing-House may be a convenient mode of arrangement for systems of connected roads in this country at some no very distant day, we publish the following description of the English House, as it is given by Dr. Lander in his *Railway Economy:*

When some progress had been made in the completion of the vast network of iron roads which now overspreads the United Kingdom, and when railway after railway, to the number of some thirty or forty, had been successively opened for traffic, and had effected junctions with each other, so as, in reality to form one connected system of internal communication, though under numerous independent administrations, an inconvenience arose which for some time appeared to menace the operations of railway establishments with insurmountable difficulties.

The exigencies of the transport had no relation with the arbitary limits which separated the domain of one company from that of another. Passengers and goods required to be booked and continously transported from one point of the kingdom to another. But no company possessed the power to do more than carry the passenger or the goods to the limits of its own line; there they were handed over to another company, who, in like manner, carried them over its territory, and transferred them to a third, and so on. Each company had its own independent machinery of transport, consisting of engines, carriages, wagons and vehicles of every description. It had its own system of financial operations and accounts, and its own tariff; the consequence of which was, that the traveler was compelled, in passing every boundary between the rails of two adjacent companies, to pass from one carriage to another, with his luggage, no matter what might be the inconvenience attending such an operation, arising from inclemency of weather, or from the hour of night.

Great as was this inconvenience, that which attended the transhipment of goods was infinitely more grave. The wagons had to be unloaded, and their contents discharged upon wharves and platforms; and these had again to be reloaded upon the wagons of the other company.

Such an operation was not only attended with great expense which must necessarily fall upon the expeditor of the goods, but also with serious delay, damage, and risk of loss. In short, the inconvenience to the public was so enormous, and the clamor which it excited, both among the commercial classes, and those who traveled by the railways, was so irresistible, that it became manifest that some arrangement must be adopted by which the public would be accomodated, and the traffic, both in goods and passengers, expedited over the railways of different companies without being rebooked, repacked, or transhiped.

The point was practically conceded, and the traffic of all descriptions carried without interruption from the lines of one company to those of another.

But this immediately produced grave inconveniences and difficulties among the companies. A portion of the receipts which was paid into the hands of each company at various stations, had to be paid over to other companies upon whose lines the traffic, whether in goods or passengers, was carried. But besides this, the vehicles of every sort, belonging to one company were unavoidably used to carry traffic upon the lines of other companies.

Hence arose an intolerable chaos of cross accounts, out of which sprung vexatious disputes and much litigation.

The confusion and difficulty were at length removed, and this system of complicated debits and credits was reduced to perfect clearness and order by a happy thought suggested by the operations of the London bankers. The similarity of the reciprocal claims of the railway companies arising out of the operations just explained, to those of the London bankers arising from the bills and checks drawn upon the others, received by each of them daily, struck the mind of Mr. K. Morison, who suggested the plan of establishing a railway clearing house, founded on principles identical with those which had been so successfully brought into operation in the Bankers' clearing house.

It is known that a check drawn upon any London banker may be paid to any other London banker, and placed to the credit of the customer who presents it; the banker reciving it undertaking to obtain its liquidation from the banker on whom it is drawn.

This, however, is offered only in an indirect manner; and, as we shall see, the liquidation is accomplished without the actual presentation of the check, or its payment in cash.

It is now about three quarters of a century since the banking operations of London became so extensive and complicated that the difficulties arising from the daily settlement of the bills and checks respectively payable by each London banker to the others called into existence the establishment now known by the name of the "Clearing house," which is located in Lombard street, in the building formerly occupied by the Post Office. This establishment is placed under the direction of a committee delegated by bankers, who mutually associate for this purpose. Two salaried functionaries, called inspectors, have its immediate management, and are there present for the transaction of business. From time to time during the day, the bankers severally transmit to this office the checks and bills which they receive, and which are payable by other bankers. As fast as they arrive they are sorted, and classed according to the bankers by whom they are payable, so that the checks and bills payable by each banker to the various other bankers are classed together.

The clerks from the several bankers who bring to the clearing house the bills and checks receivable by them take at the same time an account of the bills and checks which have arrived at the clearing house, and which are payable by them, and are thus enabled, toward the close of the day, to make up in their private books an account, as well of the checks and bills payable by them, as of those receivable by them.

The reception of bills and checks is continued at the clearing house until four o'clock, after which it ceases; and the interval from that time till about half past five is devoted to the adjustment of the accounts, which is accomplished in the following manner:

The clearing house, by a fiction, makes itself the common debtor and the creditor of all the bankers. It debits each banker with the amount of the checks and bills payable by him to every other banker, and it credits him with the amounts of all the checks and bills receivable by him from every other banker. This operation is facilitated and expedited by a simple printed form, which occupies a sheet of paper consisting of three columns; the left and right hand columns being left blank for the debits and credits, and the centre column being printed with the names of the bankers associated in the clearing house alphabetically arranged.

One of these accounts is filled up after four o'clock, as between the clearing house and each banker. The amounts of the bills and checks receivable by such banker are written on the right hand or credit column, opposite to the names respectively of the bankers by whom such bills o

checks are payable, and the amounts of the bills or checks payable by such banker are written on the left hand or debtor column, opposite respectively the names of the bankers to whom such bills or checks are payable.

These statements, thus filled up, may be considered as a debtor and creditor account between the clearing house, representing all the bankers collectively, and the single banker with whom such account is formed.

When thus filled up, the statement is examined by the clerk of the banker in question, and each item is by him verified by reference to the clerks of the several other bankers. When thus verified, it is returned to the inspector, who signs it, and either receives or pays the balance which appears at the foot of each account, according as the credits exceed the debits.

It is clear that the sum of the balances receivable by the clearing house must be precisely equal to the sum of the balances payable by it, so that the amount which it receives on the one hand liquidates the amount which it has to pay on the other; and, in reality, as must necessarily have been the case, it becomes the mere agent or channel through which the payments pass from one bank to the other.

In the practical working out of the business, there are numerous details, such as certain mutual settlements between clerk and clerk, with the sanction of the inspector, which, being of no importance to the principle of the institution, need not be noticed here.

To render clearly intelligible the operations effected by the railway clearing house, which has been established upon principles analogous to those of the bankers,' it will be necessary, first, to explain the reciprocal interchange of business which takes place, creating systems of mutual credits and debits between company and company.

The number of companies who have combined their operations in this manner is at present (Nov., 1849) forty-five, comprising all those whose railways lie north of a line passing from Bristol through London to Harwich; in fact, all the railways of the kingdom, except the Great Western, the Southwestern, the London, Brighton and South Coast, the Southeastern, and their branches and collateral lines.

These railways possess 887 stations, at any one of which traffic may be booked for any other; the consequence of which is, that there are nearly four hundred thousand different pairs of places within the circle of operations of the united companies, between which traffic may be transmitted. In passing from any one such station to any other, the traffic may pass over part of any or all of the lines of the combined companies with as much continuity of progress as if the whole system were under the government of a single company.

The service of the transport, whether of passengers or goods, consists, first, in the service of embarkation, which includes all the formalities observed at the station of departure, consisting of booking, weighing, loading, packing, &c.; secondly, of the transport, properly so called, which is represented by a mileage; and, thirdly, of the formalities and services of the stations of arrival, where the traffic is unloaded, discharged, and delivered, and frequently sent to the domicile of the party to whom it is addressed.

A certain rate of charge, according to the nature of the traffic, being agreed upon for each of these parts of the service of transport, the sum receivable for each object of transport must be divided among the companies over whose lines it passes, including those at whose stations the traffic is received and delivered. But the sum payable for such transport is received either by the company at whose station it is delivered, or partly by one and partly by the other.

Two companies must be therefore debited with the sums they thus receive, and they, as well as other companies intermediate between them, over whose lines the traffic may have passed, must be credited in the stipulated proportion according to the mileage.

The first object to be attended to by the railway clearing house is to adjust these complicated debits and credits, as well for passengers as for every species of goods with simplicity, clearness, and dispatch, and in such a manner as not to give rise to subsequent disputes.

But besides the interchange of credits for traffic, a most complicated account arises, out of the circumstance already explained, for the use of the rolling stock. The wagons of each of the numerous companies which enter into the union of the clearing house are driven indifferently over the lines of all the others, carrying traffic for various companies, and sometimes transporting a load no part of which is to be credited to the company owning the vehicle in which it is borne.

By mutual agreement, a certain fixed rate is charged for the use of each class of vehicle, and every company over whose lines the vehicles of other companies pass, being in the first instance credited for the traffic carried by these vehicles, is debited for the use of the vehicles themselves in which such traffic is carried. A mileage account must therefore be kept of all the rolling stock of all the combined companies, so that the course of each vehicle may be traced from day to day and from hour to hour, so that its mileage may be debited to such companies as may have shared its use; and in case of undue delay at the stations of any company, a demurrage may be charged, according to a stipulated condition, proportional to such delay.

To adjust in a satisfactory and equitable manner these accounts for the mutual use of the rolling stock is the second function of the clearing house.

The passenger traffic being liable to a government duty payable on booking to the company at whose station passengers are embarked, must necessarily pay this duty in advance, and must pay it for the entire trip for which the passenger is booked. This duty, however, is chargeable in the proportion of a mileage to all the companies over whose lines the passenger travels. Hence an account must be kept in which the booking company will be credited for the duty thus paid, and the several companies over whose lines the passenger is carried would be debited in proportion to the mileage for their respective shares of the amount.

When the claims of one company upon another, arising out of these transactions, are not liquidated within a stipulated time, they are subject to interest at a rate agreed upon. An interest account must therefore be kept between company and company.

Luggage, parcels, and other objects of traffic being liable to be lost or unduly delayed, claims and complaints arise between company and company. The settlement of such claims enters into the class of operations to be transacted by the clearing house.

Such are the principal fuctions which the institution of the clearing house is called on to discharge.

OTTO AHLSTROM,
MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings—The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

Burdon, Hubbard & Co.,
MACHINISTS,

MANUFACTURERS of Steam Engines, Sugar Mills, Saw and Grist Mills, Boilers, Hydraulic Presses, Pumps and Gearing for working mines, etc., etc. No. 102 Front st. BROOKLYN, N. Y.

HUDSON RIVER CEMENT COMPANY.

THIS Company is now prepared to furnish at the shortest notice, on the most favorable terms, **HYDRAULIC ROSENDALE CEMENT, NOVA SCOTIA CALCINED PLASTER, FARMERS' PLASTER,** and **MARBLE DUST,** all of full weight and of a fine and superior quality.

This Cement is manufactured by the Company from a superior selected quality of Cement Stone, from its extensive Quarries at Rosendale Ulster Co., N. Y., and has been very extensively used during the past eight years in the construction of RESERVOIRS, CISTERNS, TANKS, BATHS, CELLARS, VAULTS, etc., and for a variety of purposes "under water," such as DOCKS, BRIDGES, MILL-DAMS, FOUNDATIONS and BREAKWATERS. It is largely used for any sort of **dry concrete** and **Underwater Works.** Where strong work is needed, or dampness to be excluded, this Cement is unrivalled. It has the unqualified approbation of the most eminent ARCHITECTS, ENGINEERS, CONTRACTORS and BUILDERS in AMERICA, being used in most every department of the **Works under Government.**

It is put up, for shipping purposes, in tight, well-made, and thoroughly papered barrels—each barrel containing **300 lbs.** of Cement—and shipped direc from the works at JERSEY CITY, N. J., (opposite the City of New York), **at all seasons** of the year, thus avoiding all unnecessary handling.

The better condition, therefore, in which its articles are received by purchasers makes it an object for them to purchase its Hydraulic Rosendale Cement, Calcined Plaster, Farmers' Plaster, and Marble Dust; and which if used by persons of experience, never fail to give entire satisfaction. Orders, however extensive they may be, are respectfully solicited from Dealers, Contractors, Railroad Companies, Masons and others.

Please address, **Hudson River Cement Company, Jersey City, N. J.,** or **J. H. BUTTS, Secretary.**

N. B.—Freights obtained by good vessels on the best terms, and Insurance when required.

VENTILATION.
THE undersigned has devised and patented the only system of VENTILATION for **Buildings, Vessels, RAILROAD CARS**, etc., by which **spontaneous ventilation** can be effectually carried out; and is willing to dispose of the same to parties desirous of purchasing at a reasonable price.
Address **HENRY RUTTAN,**
Coburg, Canada.

CUMBERLAND COAL.
THE BORDEN MINING COMPANY
ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.
The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL**, remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**
Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.
For prices and other information apply to
WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**

Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting or heating irons at the end. It is very economical in fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.

IMPORTANT

TO

RAILROAD COMPANIES.

THE ATTENTION OF

RAILROAD MANAGERS

Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the

ALBANY AGRICULTURAL WORKS,

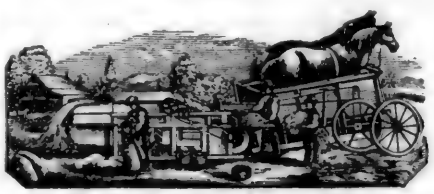
CONSISTING OF

EMERY'S PATENT

Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving hand on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	130.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, October 25, 1862.

☞ Letters, Communications, Pamphlets, etc., intended for this JOURNAL, should be addressed to the *Editor and Proprietor*, JOHN H. SCHULTZ.

NOTICE.—Inventors and scientific men wishing to introduce valuable improvements to the notice of the public, particularly such as relate to Railroads, Locomotives and Steam Navigation, will henceforward receive due attention from this JOURNAL, on the receipt of communications containing proper descriptions of those improvements; a gentleman competent to the task being connected with the proprietor for this purpose.

☞ Works on Railways and Railway Improvements, Steam and Steam Navigation, Science and Art generally, will hereafter be received at this office, and impartially reviewed.

☞ We have the pleasure of announcing to the readers of the RAILROAD JOURNAL that we are hereafter to be favored with editorial contributions from the pen of S. DEWITT BLOODGOOD, Esq., a gentleman extensively known in this country and abroad for his literary and scientific attainments, and for having during his whole life been an active friend and supporter of all useful public improvements.

The leading article in this number is from his pen.

☞ In another column we publish the Prospectus of the American West India Company, which having a large and fertile domain in St. Domingo, offers very great inducements to settlers, particularly to the colored race. It is so descriptive in itself, that we need add nothing more than to say, any enterprise with which HIRAM KETCHUM, J. W. FABENS, a former agent of the U. S., and Mr. KIMBALL, a distinguished lawyer and literateur, are engaged, must have high and benevolent purposes.

An Economic View of the Present Contest.

"United we stand, divided we fall."

Under the surface of all national glory, under all the glare of Governments and all the patriotic devotion of loyal citizens to their country, there is at the bottom a common sense principle on which even the noblest sentiments and the very obligations of duty rest. In other words, however great or honorable may be the character and conduct of any people, it will be found that whatever is admirable has arisen from and out of their material stability, the constant development of their resources, the extension of their enterprise, their uninterrupted progress and their security "in life, liberty and the pursuit of happiness." Take these away from any nation, and it retrogrades at once into anarchy, yields to the chain of despotism, or sinks into the grave of oblivion.

All the renown we have gained up to this period, has been accompanied by a solid and accumulating success, the result of our enterprise, and industry, of our natural resources developed, of our genius for appreciating them, and a Government strong enough for their protection.

This miracle of a fabric, the inspired work of our fathers, unhappily for them and for us, ceased to be what it was in the eyes of our unbelieving brethren of the South. They have therefore sinned against light and knowledge, they have drawn the sword of treason against their country, and with parricidal fury point it at the hearts of their kinsmen and brothers.

The gravest of all questions has arisen in consequence, and we are called in self-defence to consider what course is left to the North to pursue, the most just, the best for the present and for all time to come. Shall we recognize the right of secession, shall we permit another Government to place itself side by side with our own, on the streams, and rivers and bays which head in and emerge from our own territory—to receive all they float to the sea, and endeavor by peaceful submission to a new and opposing policy, to smooth down all the differences and asperities about to arise from new boundaries, new associations, new interests and new intentions.

This is evidently the wish of a large number of very good people even in the North, who are naturally averse from war and bloodshed, who deplore the waste of money and the loss of life, who think no human struggle worth such an outlay, and with perhaps an interested feeling, are fearful that their hard earned, or easily gained wealth as the case may be, is about to disappear before the unappeasable demands of war and taxation.

Nevertheless we hold that this view of the subject is wholly unsound and inadmissable. If for the sake of the personal comfort of such individuals we abandon our present position, beyond all question we shall entail on our posterity, of whom millions are to follow us, whole centuries of misery and misfortune. We might have a temporary lull of present calamity, by an armistice, a convention and a separation, but whirlwinds, hurricanes and tornadoes would follow with more than tropical fury for ages to come, and wreck us on a shore from which there would be no escape.

United we stand, divided we fall.

This is one of the wise sayings of the past, never truer than at this moment, and it is to its consideration, we earnestly desire to call the attention of our readers, and passing by all the usual arguments of the forum, or the stump we now appeal to their material interests and their good sense alone.

Let us never forget that all our greatness has been derived from the protecting power of the Republic. Its unity of constitution and of law has made the people of this country until now a band of brothers, and the obstacles to our progress have been comparatively nothing: nothing in the character of our institutions has ever retarded it for a moment. Thus all our public works have had a noble national character. Our Erie Canal though purely a state work, opened a pathway to remote States, and actually benefitted them as much, if not more than ourselves. It depressed

the price of land East, and raised it at the West; it lessened the value of grain here, it enhanced it there, yet its construction increased the comfort, the wealth and the happiness of millions, and these in a reciprocity guided by interest, have crowded our marts, and have given us a full share of their general prosperity. So of our railways; these have been stretching themselves along mile after mile, until all the States, North, South, East and West were connected by apparently indissoluble ties. The pulse of business beat regularly through the body politic alike through all its veins, and the current of life and activity was full, healthy and strong. So in the navigation of our rivers and lakes. The steamers built in New York plied on Southern waters as if in their "native element." The merchant was one day at his counting-house in the city, the next day transacting peacefully his business at St. Louis, and two days afterwards at New Orleans. In every form, in all varieties of action and business relations, we were homogeneous, friendly and prosperous. All the States had one grand and powerful representative and an Egis that protected all.

Ours was a national Government, with strength and authority enough not only to decide all domestic differences before a common and a venerated tribunal, but to shield the humblest citizen, native or adopted in every part of the world.

But let us imagine for a moment what is to become of us and ours, if the Union is to be severed, and what is to be the end of even a peaceable separation.

In the first place all further security in our future political engagements and contracts is gone for ever. If the solemn agreement of the people to remain for ever in "perpetual union," (for this was the compact,) can now be broken with impunity, what in this world can we ever trust again? If the present faultless constitution of the country, once at least the Palladium of our liberties, and which like its ancient prototype, appeared to have descended to us from heaven, shall be destroyed by those who once professed for it the greatest love, what other mortal form of words can be substituted with the hope of success and permanence. Who of us can ever trust to any compact again; who will have faith in any other that man can devise. No. The day that marks its destruction by separation of the Union will be the darkest of days, it will be followed by a long dreary night, on which no cheering ray will ever break again.

But besides destroying all future confidence in political constitutions, it will leave the States in the most unprotected and hopeless condition. Internal differences which can not possibly exist under the constitution as it is, will rise up in endless forms when we have none. The weaker States now politically as strong as the strongest, will have to seek alliance and protection from their nearest and more powerful neighbors. These, if human experience is a guide and history not a lie, will not give the required protection without some equivalent for the service, which will be a state of vassalage at once. The question of boundaries will be a source of perpetual wrangling, the navigation of the western rivers which pass through many territories and empty into the Gulf, those which debouche in the Atlantic or the Lakes, will be interrupted by local duties, as on the Elbe and the Rhine, for each party will seek to diminish its own taxation by laying it on others. Long lines of connecting railways will become an impossibility without tribute of tolls, or payments for right of way, and for the same reason. The tariffs on imports will be as numerous as the States that are in want of money. The currencies and coins of these will also be different, and as unstable as the legislation which creates them, for this will always be for local advantage, and of course always selfish. Travel from one part of the country to the other will be embarrassing, restricted by passports perhaps, and at every few miles in advance it will be through sections politically unfriendly. Confidence in commercial transactions will depart, for want of agreement in interest, from uncertainty in collections, and the costly necessity of appealing to foreign tribunals for the recovery of debts, for such the Courts of the States would then practically be. In short a perfect chaos would be produced out of these fragments of our ruined republic.

Nor would industry nor even capital be protected in this condition of things. Every State, and every association of States, would be compelled for self-defence to commence the construction of forts on its borders, just as we have seen them constructed already in the States which have been the seat of war, their capitals would require fortifications, just as Washington and Richmond now do, every pass in the mountains would have to be guarded, and bristle with artillery, every navigable river open to the sea would require batteries at its mouth, or on its cliffs. The whole country would have to be trenched to protect the States against each other. And forts and navies would require hundreds of thousands of soldiers and sailors to man them. Who then would escape taxation? Whose pockets would then be beyond the reach of the Collector. And in addition to all this, each State or association of States would be compelled to establish for itself a system of foreign relations and diplomatic service crowding the Capitals on this continent and the Courts of Europe at an enormous expense, with third rate demagogue ministers to keep up the semblance of sovereignty and independence. What advantage could be gained by a change to such a system of small republics? Absolutely nothing, but a loss too great to be at present computed.

All the causes of war usual among nations, would be multiplied here in exact proportion to the number of the parties interested, and no amount of industry or commerce could stand the exactions of such internal wars. If we take the cost of fortifications, armaments, navies, seamen and soldiers, which each new fragmentary republic would have to provide, we will find the sum total so vast, as to exceed the actual resources of the States for generations to come. Indeed the sums we are spending to put down this rebellion are nothing in comparison with those which the new republics would have to expend for self defence if not for existence itself. Let us illustrate by an example. Holland, or the Netherlands has a population of about two millions and a half, a million or so less than the State of New York, but its area is only about one quarter as great. If there is a country in the world which deserves to be prosperous it is Holland, noted for her bravery, her persevering industry, and her love of liberty. Yet she has ever been the victim of ambitious powers. Decimated alike by the ruthless Spaniards and the insurrectionary French, she still staggers along under a debt of four hundred millions of dollars, absolutely the price of her efforts to maintain her national life. What would Delaware, or New Jersey, or Rhode Island or any of the small States, with an area less than 11,000 square miles, that being the extent of the country of the Netherlands, what would they do with a future debt of four hundred millions? What would even our great Empire State do with such a debt, when it groans under one of thirty millions incurred for public improvements, now making the richest returns to the treasury.

But it may be said the separation of the Southern States will not lead to any further divisions. He is no Statesman who says this. If the Southern States hold the Gulf of Mexico as their share of the plunder of our nationality, they hold the navigation of the Mississippi, the Missouri, all their tributaries east and west, and will even tap the Pacific Railroad itself. The Western and North Western States will be compelled to form treaties for their own protection with the Southern States, to which New England can have no claim to be a party, and against which she will have no right to interfere.

The day will come when divisions between the Eastern and Middle States will arise on various questions, perhaps peculiar to New England. Will New York consent to pay a bounty to the fishermen of Cape Cod?

But we assume the broader principle, that once the unity of the country gone, there is no security any longer for any one of the divided States. Leaders bold, mercenary, ambitious and unscrupulous, will rise all around us, mushrooms of the hour, just as they have risen in the South, and seizing the reins of power will never let go, till they have fully aggrandized themselves and their families at the expense of the people at large. Let the Union once be divided and the subsequent divisions will be innumerable.

Will not our readers then come to the conclusion with us, that this Union must and shall be preserved. That the loss of money and of life so far is nothing to that which disunion will cost, when we shall be forever divided; the States shot madly from their spheres, armies, navies, taxes all around us, one perpetual state of war and confusion, national debts piling up by millions of dollars everywhere, no more internal free trade, no strong arm to protect us, no flag, no country, no nationality, a prey to domestic robbery and foreign foes. Such will be the end of this conflict if the Union is destroyed. Merciful heaven and shall this be? Shall we listen for a moment to anything like a compromise, which admits the right or principle of secession?

Let us lay aside all other questions then, and every political error which so easily besets us, and attend solely to the solution of the present difficulty by force of arms. There is no other salvation for us. It will even be a mercy to the Southern rebels to conquer them. They would be utterly ruined by any form of Government they have adopted or could adopt. They have been told so by their greatest men long before the rebellion began.* The masses of the people at the South

perceive they have gained nothing by the war, and are secretly expressing their disgust and disappointment with their leaders. Let the war continue to the bitter end. There is no other way to save the North or the South. The Union must be restored or both are ruined forever.

Petroleum.

This recently introduced illuminating fluid is being presented in enormous quantities for use, and if the statements relative to its comparative cheapness be correct, there is little doubt that its consumption will be on a corresponding scale. There appears to be no reason to doubt that as this oil is furnished from the vast laboratory of nature it can be made to undersell all other kinds of oil for lighting purposes; and there is every reason to imagine that further discoveries will result from the chemical analyses provoked by present discussions concerning its nature and properties:—

Export of Petroleum Oil from America.—From the 1st of January to the 8th of September, 1862, from New York, 3,772,414 gallons; from other ports, 2,117,522 gallons; total, 5,889,936, gallons, or 150,000 barrels in eight months.

Illuminating Power of Petroleum. It has been very rightly remarked that the difference of price per gallon is not always difference of cheapness between two burning fluids for illuminating purposes. A mixture of alcohol and turpentine may be bought for half-a-crown, and yet it is more expensive, when the quantity of light given is taken into account, than sperm oil costing three shillings and sevenpence. The low price of refined petroleum having of late caused its extensive use, the experiments of Professor Booth and Mr. Garret, of Philadelphia, as to its illuminating powers are very interesting. They were mainly made to test the relative illuminating power of mineral oil in respect to that of common coal-gas. Four kinds of oil were tried, but there was very little difference between them. It was found that 2.599 gallons of mineral oil give a a light equal to 1,000 cubic feet of gas, while it required no less than 11.669 gallons of burning fluid (alcohol and turpentine) to produce an equal amount of light. Various experiments were also made to determine what form of flame gave the most intense light with the least quantity of oil, and it was found that a clean straight-cut wick gave the best results. With a clean straight-cut wick, 2.576 gallons of oil gave a light equal to 1,000 cubic feet of gas, while with an arched flame 2.846 were required. Losses of from 4 to 20 per cent. were observed with different trimmed wicks. Other experiments showed that to produce a light equal to 1,000 cubic feet of gas took 35.53 lbs. of paraffin, 41.16 of spermaceti, and 47.18 of adamantine candles. The relative costs of the lights were —gas, 8s. 9d.; petroleum, 4s. 5½d.; spermaceti candles, £4. 3s. 4d.; paraffin candles, £2. 8s. 8d.; adamantine candles, £2. 11s. 5½d. Judging from these experiments, therefore, petroleum is the cheapest known source of artificial light.—*London Money Market Review.*

In our last number we gave the most recent advance in this article.

The Clearing House System.

We conclude in this week's Journal the interesting article on the Clearing House System in England taken from Dr. Lardner's valuable work on Railway Economy:

Let us now consider the manner in which these operations are effected.

The central clearing house is established in London, in a building situate near the Euston station of the Northwestern Railway. It is placed under the direction of a body of managers elected by the companies, in which each company is represented.

This central office has agents at all the stations comprised within the circles of the united companies.

In adjusting the mutual debits and credits of the companies, no company is regarded either as the debtor or creditor of any other, but the clearing house is the common creditor and the common debtor of all. We shall explain successively the mode in which each class of claim is arranged, beginning with the most important.

THE GOODS TRAFFIC AND LIVE STOCK.

From each of the 887 stations goods are, or may be, forwarded daily to any or all of the other 887 stations. An account of such goods, so forwarded, with the sums paid and received for each parcel, is kept at each of these stations, and a copy of this account, written in *black ink*, is forwarded daily to the central clearing house in London.

In like manner, at each of the 887 stations a quantity of goods is, or may be, received daily from any or all of the other stations, an account of which is kept. A copy of this, written in *red ink*, is daily forwarded to the central clearing house in London.

The central clearing house thus receives, or may receive, 887 black and 887 red accounts daily; the black reporting all the goods which have been received at all the stations.

Now, as it is evident that the goods which are received can neither be more nor less than the goods which are forwarded, the red accounts must correspond exactly with the black accounts, although the items will occur in a different order. A parcel of goods dispatched from one station must have arrived at some other, and a parcel of goods which has arrived at any station must have been dispatched from some other. Thus an entry in the black accounts must have a corresponding entry in the red accounts, and an entry in the red accounts must have a corresponding entry in the black accounts.

This is what ought to take place, supposing no error in the accounts, and no miscarriage in the transport: but in practice it is found that this perfect accordance is never realized, and that there is, upon an average, somewhere about thirty per cent. daily of entries in the one which have no corresponding entries in the other. This discrepancy arises from one of three causes, *first*, from an entry being made of an object dispatched, which object has been accidentally, or, through error, mislaid; *secondly*, from an entry being omitted of an object received, although that object may have been received; and, *thirdly*, from a miscarriage *en route*.

At the central clearing house, where the two statements of accounts, black and red, are compared, and their discrepancies detected, letters are written to such of the stations where the errors have been committed, giving notice of the omission, and demanding explanation. Rectifications and explanations ensue, and the accounts are finally adjusted.

The central clearing house having opened an account with each of the companies, credits each with the sums which appear to be receivable by it from the system of accounts explained above, and debits it for the sums with which it appears to be chargeable.

At the close of each month, these several accounts between the clearing house and the companies respectively are balanced. In some of these the balances are in favor of the clearing house, in others in favor of the company; but from the nature of the transactions, these sets of balances must be precisely equal; the sum due to the clearing house by the debtor companies must be equal to the sum owing by the clearing house to the creditor companies. The debtor companies having liquidated their balances, the clearing house distributes the sum it receives between the creditor companies, in the proportion of their respective balances.

But if the debtor companies, or any of them fail to liquidate their balances within a specified time, then the clearing house debits such companies with interest on such balance at the rate of five per cent.; and it credits those creditor companies whose balances it fails to liquidate, in consequence of such delay, with interest at the same rate. Thus the interest credits will be exactly equal to the interest debits.

PASSENGER TRAFFIC.

When passengers are booked at any railway station for any other station, they pay their full fare, and receive a stamped ticket, on which is indicated the place, day and hour of their departure, and the place of their destination.

On arriving at their destination they deliver up this ticket to the agents of the station of arrival. Carriages and horses booked are represented in like manner by tickets or checks, which are delivered up on their arrival. Parcels and baggage are entered on a way bill, in which are indicated the places of their destination, and the sums paid, or to be paid, for them.

Each station sends daily to the central clearing house a statement of the number of passengers of each class which it has booked, with their places of destination, and the sums received. It sends, also, a statement of the horses, carriages, and parcels, booked, with like particulars.

Each station likewise sends to the central clearing house all the tickets which have been delivered by passengers who have arrived there daily, as the checks for carriages and horses, and likewise a statement of the parcels and luggage which it has received.

At the central clearing house the tickets are examined and classed, and their number in the gross of each class compared with the number in the gross of the passengers who have been booked. These two ought to correspond, and any discrepancies are notified, and ultimately explained and adjusted. This operation is facilitated by a course observed in all the booking offices, in consequence of which the passenger tickets of each class are issued in numerical order, each ticket being stamped with a seperate number, and the numbers following each other consecutively for each class daily from 1 to 10,000.

The account for parcels is dealt with in a manner precisely similar to that which has been already explained in the case of merchandise.

The clearing house debits the companies respectively for the sums they have received for all these objects, and it credits them according to the stipulated rate for the mileage, embarkation, or delivery of such as have passed over their lines for such as they have booked and embarked, and such as they have discharged and delivered.

These accounts are balanced monthly, and dealt with in the same manner, exactly as has been already explained in the case of goods.

The passenger tickets, after having been duly examined and classed, so as to regulate the clearing house accounts, are returned to the companies respectively.

A separate account is kept of the government duty payable for passengers, and which, as has been observed, is exacted from the company with whom the passenger is booked, though chargeable to all the companies over whose lines the passenger is carried, in proportion to their respective

---

* In 1851, the Hon. W. W. Boyce, addressed the following protest against secession, to the people of South Carolina: "South Carolina cannot become a nation. God makes nations, not man. You can not extemporize a nation out of South Carolina. It is simply impossible; we have not the resources. We could exist by tolerance, and what that tolerance would be, when we consider the present hostile spirit of the age to the institution of slavery, of which we would be looked upon as the peculiar exponent, all may readily imagine. I trust we may never have to look upon the painful and humiliating spectacle.

"From the weakness of our national government, a feeling of insecurity would arise, and capital would take the alarm and leave us. But it may be said, Let capital go. To this I reply that capital is the life-blood of a modern community, and in losing it, you lose the vitality of the State.

"Secession, separate nationality, with all its burdens, is no remedy. It is no redress for the past; it is no security for the future."

mileage. The clearing house credits the company which books for the entire amount of the duty it has paid, and then debits all the companies over whose lines the passengers are carried, including the booking company itself, with their respective proportions of the duty according to the portion of the lines over which the passengers have been carried.

Although the clearing house accounts are only furnished monthly to the several companies, yet a weekly abstract of the account for the traffic in passengers and goods is sent to them respectively, to enable them to make up, as is customary, their weekly returns of traffic.

CARRYING STOCK.

The clearing house has agents posted at all the points of junction of the lines of different companies at which traffic is liable to pass from one to another. The duty of these agents is to register the number and quality of each vehicle, which passes from one line to another, indicating its owner. They also register the number of the tarpaulins by which wagons are covered, and which do not necessarily constitute a part of the wagon, nor always belong to the same owners.

The clearing house agents at all the stations keep a similar register. A comparison of all these registers, copies of which are sent up to the central clearing house, enables the authorities there to trace the course of every wagon over the network of lines, and to ascertain its daily mileage on each line, and the time it has been detained at the stations respectively. The clearing house by these means is enabled to debit the companies respectively at a stipulated rate of mileage for the use of the wagons or of the tarpaulins, as the case may be, and to credit the companies who own the same for like sums. A statement of accounts representing the use of the rolling stock is thus opened between the clearing house and the companies respectively. In each of these accounts there appears on the credit side the sum due to the company for the use of its wagons and tenders by other companies, and on the debit side of the sums due by it for the use of the wagons and tenders of other companies upon its lines. The balances of these accounts are settled monthly, and are subject to precisely the same observations as the balance of the traffic.

Finally, all questions and claims respecting lost luggage or parcels are made and arranged through the agency of the clearing house. When any parcel or other object has failed to arrive at its destination, or when any passenger misses a portion of his luggage, notice is sent to the Lost Luggage Office and the clearing house, with an indication of the route over which the passenger traveled, or the station at which the lost object was booked. A communication is immediately sent to all the stations along the line indicated, with a description of the object lost, and answers are duly received. In general the object is recovered if lost upon the road.

The enormous extent of the transactions in the settlements of which the agency of the clearing house is employed may be imagined from the following circumstances:

The number of communications made daily from the central clearing house to the provincial stations respecting errors and omissions in the reports of traffic are estimated at two hundred and fifty. The number of distinct accounts settled and balanced monthly for the goods traffic alone is estimated at about five thousand.

The monthly account furnished to each of the companies who are united in the establishment of the clearing house contains for each station of each company a statement of the weights of each object of traffic, the distances on the respective lines over which it is carried, the expenses of its embarkation and disembarkation, and the balance on the total traffic at each station.

These monthly accounts are considered final so far as respects their settlement, and in case the companies fail to liquidate them they are chargeable with interest; but any errors or omissions which may be detected in them are corrected and allowed for in the accounts of the subsequent month.

As an example of the complexity of the accounts settled by this establishment, it may be mentioned that in the parcel department alone the majority of parcels booked are under twelve pounds weight, and the total charge for their embarkation, transmission, and delivery, frequently does not exceed four shillings. Thus, for any part of London the charge, including cartage and delivery, is only one shilling, and the charge between London and the remotest part of Scotland is only four shillings. These charges have to be debited among all the companies over whose lines and in whose wagons the objects may have been conveyed. In this way one shilling has sometimes to be credited to three companies.

The principle which has been brought into successful operation in the clearing house admits of still more extensive application, which doubtless it will receive.

The practical effect of the arrangement, even so far as it is hitherto developed, is to facilitate such an interchange of the use of the rolling stock, and the service of the stations between company and company, as to render their benefits in a great degree common to all. Each company by this expedient maintains a stock not only for its own traffic, but to some extent for the traffic of other companies, and in exchange receives the benefit of the stock and the stations of other companies.

The perfection to which this system tends would be, that a common rolling stock should be kept for all the companies, in the support of which they should as it were club, each contributing a share to its maintenance, in proportion to the quantity of traffic transported by it.

At present the interchange is limited to the vehicles of transport, the engines of each company being confined in their movements to the lines of the company to which they belong; but there is nothing which should prevent, under proper arrangements, the same interchange of locomotive power as now takes place with so much advantage in the carrying stock.

In fine, the clearing house may ultimately grow into an establishment for the maintenance of a general locomotive and carrying stock for the use of all the railways, to be supported by the railways in common, and charged to them in the proportion in which they use it.

So far as regards the management of the traffic, there is nothing which should limit the operation of the clearing house to the railways of the United Kingdom.

By proper arrangements, the same reciprocal conveniences now obtained by the railway companies in reference to the traffic booked through, as it is technically called, might be extended to the entire continent of Europe, so that passengers or goods might be booked at any station on any continental railway. The fare might be received on booking either wholly or partially, and might be distributed between the various lines over which the traffic should pass, in the same manner as it at present is among the railways which are united under the clearing system.

Atlantic and Great Western Railway.

The reports just received from the engineers of this road show that the works are rapidly progressing; it is now certain that 110 additional miles will be open by the end of this month, including the branch of twenty-seven miles to the Old Springs at Titusville. When these are completed, a large increase of traffic will accrue. The return for the month of August shows an increase of $5,989. The great rise which has occurred in the value of petroleum, and the large trade that will take place in it, must ensure an enormous traffic to the Atlantic and Great Western Railway from this source alone, as it will have the monopoly of the carriage.

Chicago and Northwestern Railway.

The following is a comparative statement of the earnings of the Chicago and Northwestern Railway for September, and for six months ending October, 1861 and 1862:

September,	1862.	1861.
Passenger	$43,292 37	$30,713 47
Freight	58,141 27	53,579 29
Express	887 50	807 03
Mail	1,695 83	1,695 83
Miscellaneous	77 28	49 50
Car mileage	185 53	321 79
Total	$104,279 78	$87,166 91
Increase		$17,112 87

For 6 mos. from April 1, to Oct. 1.	1862.	1861.
Passenger	$173,567 27	$156,152 79
Freight	323,914 19	279 881 48
Express	5,244 53	4,766 40
Mail	10,174 53	9,662 88
Miscellaneous	1,384 72	356 01
Car mileage	1,178 36	2,301 70
Total	$515,464 05	$453,121 26
Increase		$62,342 79

STATEMENT OF INCOME ACCOUNT, Oct. 1, 1862.

Balance to credit of Income Account, as per Report to April 1, 1862 ..... $562,615 35

By gross earnings from April 1, 1862, to Oct. 1, 1862:

From passengers	$173,567 27	
" freight	323,914 19

Leaving surplus of earnings over operating expenses, and amount paid for interest on bonds, exchange, etc., from April 1, 1862, to Oct. 1, 1862.		182,784 86
Leaving balance to credit of Income Account, being excess of earnings over operating expenses, and am'nt paid for interest on bonds, exchange, etc., from June 1, 1859, to October 1, 1862		$745,400 21

☞ There is a call on the shares of the Buffalo and Lake Huron Railway for this month of $10 per share.

Tow-boat Companies as Common Carriers.

TOWING CANAL BOATS. COMPANIES LIABLE FOR THE UNSKILFULNESS OF THEIR AGENTS. WHEN SPECIAL CONTRACTS ARE VOID FROM PRINCIPLES OF PUBLIC POLICY.

An action was brought in the Supreme Court of New Jersey against the Pennsylvania Steam Towing and Transportation Company, proprietors of the Steam tug Henlopen to recover damages for negligently towing the canal boat, Free Trader, belonging to the plaintiffs, on the Delaware River, by reason of which alleged negligence she was sunk and lost.

The agreement was to tow the boat from Bordentown to Schuylkill and back for the sum of seven dollars, "at the risk of the master and owner of said boat, and subject to the stipulations following; first, the said master expressly agrees to have a competent man at the helm of his said boat at all times while the tow is in motion; second, the said master expressly guarantees that his said boat is seaworthy, and reasonably fit for the trip undertaken."

The Free Trader with thirteen other boats were arranged and fastened together in three tiers of four abreast, and two abreast in the rear; the tow line being some sixty feet in length. When nearly opposite Rancocas creek, at about the hour of twelve or one o'clock in the morning, the steam-tug suddenly struck on a bar or other obstruction and became fast; the tow was thrown into confusion coming into collision with the steam-tug, and the boats with each other; the stern line of the plaintiff's boat parted or gave way. It swung around on the Pennsylvania side, and in the general jostle it was injured and sunk, and had not since been raised.

The plaintiff's boat was not shown to have been unseaworthy; but it was proved and admitted that there was no person at the helm at the time of the occurrence, and had not been for some fifteen or twenty minutes, although there were persons on board. The justice charged the jury at the trial, that if the steamer was out of her course, and had struck upon a bar in consequence, and if this was occasioned by the want of ordinary care and prudence, such as a prudent person would take of his own property, the defendants would be liable for the loss, notwithstanding the written agreement aforesaid. And that if the sinking of the boat was the inevitable consequence of the grounding of the steamer, and if a man at the helm could not have been of any possible service in saving the boat, then his absence from the helm at the moment of the accident, could not affect the plaintiff's right to recover.

The jury rendered a verdict for the plaintiffs. The defendants appealed, contending for a new trial, on the ground that the special contract above referred to exempted them from all liability to the plaintiffs; the plaintiffs having assumed in such contract "all the risk."

The Court refused to grant a new trial, and held, that under this agreement, if the boat to be towed was seaworthy, the only risks that the towing company were exempt from were the risks incidental to ordinary careful navigation, and they were not exempt from liability for damages caused by the negligence or unskilfulness of their agents or servants; and that the failure of the master and owner of the canal boat to perform the stipulations of the agreement did not affect the liability of the party towing the boat, unless such failure to perform contributed to the accident.

The following is a portion of the opinion delivered at the decision of the case by

VAN DYKE J.—The principal defence in this case is, that here was a special contract between the parties by which the plaintiffs agreed to incur all the risk of such a loss as occurred; and the first question which seems to present itself is, can common carriers lawfully make a special contract, changing their liability from that which was imposed on them by the common law? I can see no reason why they may not, under proper circumstances make contracts with their employers not contrary to public policy, by which their liability may be regulated, lessened or limited. * *

But a more important, as well as a much more difficult question, is the extent to which a common carrier, may, by a special contract exempt himself from liability. This question has given rise to much discussion, to various *dicta*, and a number of decisions upon the whole not very harmonious, so far from being so in fact, as to leave the law on the subject far from being settled. * *

While therefore, it seems to be very well established that special contracts may be made between the parties, the great weight of authority seems to be, that carriers cannot be permitted to make contracts by which to shelter and protect themselves in courts of law against their own clear and palpable wrongs, either of omission or of commission. They may contract for exemptions against such accidents as common prudence could not force or guard against, and when no actual fault can be ascribed to them; but it has been repeatedly held contrary to public policy to sustain a contract by which a carrier might be tempted into dishonesty or a relaxation of his faithfulness and duty. It seems to be conceded that he cannot contract against his own fraud; but fraud is but one of the forms of wrong of which a carrier may be guilty, and against which he cannot lawfully contract; but it is no more repugnant to law than any other mode, by which the owner of property, confiding it to the care and custody of others to be carried, is cheated, swindled, or otherwise deprived of it by the clear wrong, fault or misconduct of the carrier, and it matters but little to the owner whether the loss occurs by the one mode or the other. Gross negligence is held to be presumptive evidence of fraud, and the omission to exercise proper skill, when skill is presumed and required, is considered gross negligence. The rule to be drawn from the great preponderance of authority, the one which is demanded by public policy, and which is sustained by correct legal principles, is this, that a carrier taking exclusive custody and control of the property of another to transport from one place to another for hire, should be allowed to make no contract by which he can justify himself in or defend himself against his own clear positive wrong, default, or misconduct, whether it arise from his own wilfulness, recklessness, incapacity, want of skill, or the failure to exact it. If the loss arise in part or in whole from the conduct of the owner, this is always a defence, and always has been, whether there is a special contract or not; but if it in fact arise from the failure to exercise an ordinary and reasonable amount of care and skill, and the exercise of which, by the carrier, would have prevented the loss, it should fall upon him, and no contract should protect him against it. * * * * * *

I think that the defendants were public carriers or transporters for hire, I think that, for a price fixed by themselves, they undertook to transport the plaintiff's boat and cargo from Bordentown to Schuylkill; that for that purpose they took the entire custody, control and management of her, and must be responsible for her loss, unless they have some exemption by which they are to be freed from it. * * * *

The contract was a proper and legal one rightly understood. It was intended to exempt the company from a class or set of accidents, for which they would be liable as common carriers, but are such as ordinary care and prudence cannot forsee nor prevent, but was never intended to permit them to take advantage of or justify their own wrong, or to shelter them against their own frauds, faults, misconduct, incapacity, or clear negligence or carelessness of any kind—for all these they still remained responsible. * * *

Whose fault was it that she did strike? Certainly it could not have been the plaintiffs; it must have been the defendants. Fault or great negligence there must have been. It was a case where skill was presumed and required, and if unskilful or incompetent persons were put in charge of the steamer, it was gross wrong and gross negligence, amounting to fraud upon the owners of the property. If the necessary skill existed and was not exercised when the exercise of it would have prevented the loss, it was also gross negligence and gross wrong; nor is it possible to doubt that if the necessary skill had been present, and had been properly exercised and exerted the accident would not have occurred.

* * * * * * *

A man at the helm could not have prevented the parting of the stern line, nor the collision of the boats, nor their swimming around the steamer. All the use he could have made of the helm, had he been at it all the while, would have been to steer, or attempt to steer the boat. This, it seems to me, must have been perfectly futile. But this question was submitted to the jury by the Chief Justice, in a charge which the defendants have no reason to complain of. They have found under that charge, and under the evidence that the loss of the plaintiff's boat was the inevitable result of the striking or grounding of the steamer, and that nothing which could have been done by a man at the helm could possibly have prevented it.

I think, therefore, that the charge of the Chief Justice, as to the law of the case, was correct, and I can find nothing in the facts to justify the setting aside of this verdict.

Literary Notices.

THE BANKER'S MAGAZINE AND STATISTICAL REGISTER, J. S. HOMANS, JR., Editor, October 1862.

This excellent work has a speciality, like ourselves, and is a standard authority with its friends the Bankers and Insurers. I. is edited in an elevated and careful spirit, and its range of thought is wide, practical and philosophical. Mr. Homans, Sr., now in the Treasury Department at Washington, and a principal contributor, is one of the ablest and most correct statisticians in this country, and has a corresponding reputation at home and abroad.

American Railroad Journal.

Saturday, October 25, 1862.

Stock and Money Market.

The past week has witnessed some exciting movements in our Money and Stock Market. It is almost impossible to speak confidently of its present tendencies. Gold appears to be the barometer by which every thing is judged, and the discussions in relation to it are as animated and inconclusive as ever. On Tuesday the price fell and rose again, from 128½ to 131⅝, and on Thursday it was 132½.

In the opinion of many Bankers, especially those of the Bullion school, we must look forward to further advances in consequence of the continued issues of government notes and certificates of debt. Others again contend that as there are but two demands for its use, viz., to meet the interest on Government loans and to remit for foreign indebtedness, the amount required is within the range of calculation and may be met without difficulty. The exports of American produce for the last two weeks have been very large compared with those of former years and are stated as follows:

	1860.	1861.	1862.
For the week	$2,072,047	$2,816,470	$5,077,486
Prev. rep'rt'd	75,434,294	101,336,116	113,962,601
Since Jan. 1.	$77,506,341	105,151,586	119,040,037

The clearances to the single port of Liverpool, included in the above, are of the value of $2,445,040. And among the articles cleared exclusive of specie were 3,200 bales of Cotton, and a very large value of Meat, Provisions, Butter, Cheese, Lard, &c., besides the usual heavy volume of Grain and Flour. This is the first instance in the history of the port of New York that so large a weekly export as $5,000,000 has been reached,

exclusive of Specie. Gold has been excluded from the transactions of the Philadelphia Stock Exchange, and this measure has been adopted in our own city. The Banks are also moving.

The foreign export of coin from New York, from January 1st to September 20th, this year, has been $42,846,000, being largely in excess of the export of late years, except the year 1859. The average for the past ten years has been $30,025,500. The following table shows the export of each year, to the 20th of this month, since 1851.

Years.	Export. 8½ Months.	Years.	Export. 8½ Months
1852	$19,918 000	1858	$19,875 000
1853	14,775 000	1859	56 444 000
1854	29,106 000	1860	38,452 000
1855	24,344 000	1861	3,266 000
1856	38,583,000	1862	42,846,000
1857	32,564,000		

It was reported last week that the Secretary of the Treasury had been recently buying up gold for its immediate purposes at the rate of 20 per cent premium. We believe this newspaper statement was incorrect. As early as July last Mr. Chase was advised to operate through some of his agents at New York to ship privately on account of the Government, a million of bushels and more of grain to Europe. At the prices then ruling, he could have done so and received the full value in coin at Liverpool or London. This sum he could have ordered home in specie and saved the premium. The mere fact of its coming back in such large amounts would have knocked down the price in Wall street, and stopped the unjustifiable and unreasonable speculation in the article, which has been going on with so much damage to the public interests generally. He has agents abroad to whom the business could have been safely entrusted. As matters now stand, since the Alabama has done so much damage to our commerce, the rate of insurance has risen so as to interfere materially with the operation, but even now it might be better to do it than to pay 40 or 45 per cent premium, nor would such a proceeding be without an honorable precedent in our own history. In the month of October 1778 Congress passed a resolution in the following words:

"Resolved that tobacco, the property of the United States, *be shipped for the payment* of the debts and contracts of the said States." Thus it appears that Congress when it wanted money or owed money, did not hesitate to take the usual methods of merchants. If it could ship tobacco to help its treasury, we see no reason why Mr. Chase may not for the same purpose send grain. We learn he is about to try his hand at shipping cotton, and there is enough coming in daily at Memphis (1500 bales per diem) to make a good beginning.

There is evidently a conflict at hand between the Banks and the Government with regard to what should be the character of the paper currency. The former, desire that the Treasury should abandon its attempt to furnish a currency for the people other than that of gold and silver. The answer to this, is, it is utterly impossible. It is also maintained that a Bank bill is the best currency because it is a title deed to a corresponding portion of the capital of the institution issuing it. It may be so in idea, but it is not so in fact, in practice, or according to experience. On the contrary all bankers and financiers know that such title deeds are extremely precarious and of very doubtful value, and give practically only a claim to the fund for its redemption in the Comptroller's office, and that sometimes depreciates. Depositors by the laws of our own State have a first lien on the assets of the banks and the stockholders take what is left. Nor is it true that a Bank to get circulation must have its assets in such a shape that they can be speedily converted into gold. This may be the theory, but it is illusive and never reduced to practice. There is not a Bank in New York which was ever able to do this or ever will be. The assets of the banks are the promises to pay, of its debtors, and there is not gold enough in the loyal states to-day to retire the notes discounted by the Banks, after their depositors shall have been paid.

It is very easy to generalize on these subjects, and every man thinks he can do so. Perhaps he can, but to carry out these theories is utterly impossible. So the mathematician tells you that a point has neither length, breadth nor thickness, and that a line has length and no breadth. But when the machinist comes to work, he finds points are material and substantive, that they have friction, and so of the lines which he uses in the translation of power in his various machines.

Now our Government like all others has to face facts, and it must now depend on a paper currency, either its own, or that of its banks. If it can not pay cash for its issues, it proposes to fund them, to pay the interest in gold, and gives the whole property and revenues of the country as a security not only for this, but for the final redemption of the principal. Has any broken Bank done this, and can any sound bank give as good security to do it?

We hold that is the same spirit of speculation in gold which we often see in other articles which has helped its advance. There are times when sugar, and flour, and coffee become as much the subject of speculation as gold, and no one is surprised or scared. These things all adjust themselves in time.

That our views are practical we are satisfied, from a circumstance of of no little import. The London Money Market Review of Sept. 20th entertains very similar views.

It says:

We invite the attention of our readers to an important change now in progress in the American trade, the bearing of which is plain. The balance of payments, so long adverse to America, and so long favorable to Europe, appears to be at length almost redressed, and, unless shipments of merchandise are made speedily to the other side of the Atlantic, a portion of the specie sent recently to this country from New York may be withdrawn. Let us submit the figures from which this probability must be deduced. For a recent week the imports and exports at New York were as follows:

Exports—Produce	$3,697,657
Specie	700,431
	$4,398,088
Imports—Total	1,957,397
Adverse European balance	$2,440,691

This is an altered state of things, New York exporting £500,000 weekly in excess of its imports. If then this state of things continues, while the balance of payments between America and Europe is adjusted, there can only be the one result. Europe must in turn discharge the adverse balance which the export trade of America creates.

The question which naturally first of all occurs is, whether the United States is likely to maintain its exports on this excessive scale. We think so, at least for several months, and for the following reasons:—1. The American wheat harvest is, with few exceptions, above the full average of last year in most districts. 2. The unsettled state of the country consequent on the war stimulates realization, and, after the wheat trade ends, the provision trade, chiefly in packed pork and beef, but largely in bacon, cheese and butter, will present the means. 3. The Indian corn crop has never yet proved a failure, and is not therefore likely to do so this season.

The import of American securities into New York no longer calls for gold on any terms. American purchases in Europe of late have been very moderate, and, ceasing to owe money to Europe, America by its produce shipments may once more become the creditor.

Although it is true generally that the demand for commodities, including bills, raises their market value, the difficulty in the New York Exchange market at the moment is whether the quotations for sterling bills is real or nominal. Gold, at least, is acted on by causes which have little to do with the currency on the prices of commodities; it is in demand just as wheat was during the Irish famine, or as gold was in this country after the escape of Napoleon from Elba, and down to the close of the war at Waterloo.

Few, we think, will longer doubt that positive opinions on the American Exchange are not worth much, and that the course of events must be watched closely. The fact is the quotations of bills are misleading, and reliance must be once more placed on the old fashioned figures which tell us what we export and import, and what New York does in the same way; and these show now that a change is in progress in the American trade.

We notice in the *Evening Post* of Thursday an elaborate article which says "that the rate of *foreign exchange* regulates the price of gold in our market." If so, then according to the views expressed in the foregoing extract, the price of gold is sure to fall, and this very soon.

The following quotations of sales of Railroad and other securities, at the New York, Boston, Philadelphia and Baltimore Boards are in addition to the list of daily sales in those cities given elsewhere—altogether comprising most of the operations reported during the past week:

New York.—N. Y. City 6s, 1875, 108; Illinois coupon bonds, 1862, 102; do., 1870 and 1875, 105; Cumberland Coal pref., 13⅛ and 15; Lackawanna and Western 1st mort., 108; Detroit, Monroe and Toledo 1st mort., 98; Norwich and Worcester 64 and 66; N. Y. State 6s, 1873, 120; Illinois Canal bonds, 1860, 100; do., registered bonds, 100 and 101; Pacific R. R. 7s, guaranteed by State of Missouri, 45; Toledo and Wabash interest bonds, 88; Indianapolis and Cincinnati, 46; Little Miami, 115; Illinois sterling bonds, 100, Michigan 7s, war loan, 106.

Boston.—Concord, 62; Ogdensburg 1st mort., 90; do., 2d mort., 8; Chicago City 6s, 100¾; do., 7s, 108 and 110; Vermont Central 1st mort., 28½; Rutland 1st mort., 45; do., 2d mort., 8; Boston, Conc., and Mont., 30; Cheshire, 20; do., 6s, 1830, 102½; Mich. Central 8s, 1869, 114; Maine State 6s, 110; Vermont and Massachusetts 6s, 100½; Worcester and Nashua, 65½; Massachusetts State 6s, 1868, 116; Petherick Copper Co., 8⅛; North Cliff, 1¾; Pontiac, 4½; Toltec, 3⅝; Huron, 10⅛; South Side, 1¾; Malden and Melrose, horse, 6¾ and 8.

Philadelphia.—Schuylkill Nav., 6; do., pref., 16½; do., Boat loan, 99; do., 6s, 1882, 72; North Pennsylvania scrip, 75; Philadelphia and

Reading 6s, 1843-'80, 109; do., 1844-'80, 108½ and 109; Morris Canal, 56; do., pref., 125; Schuylkill Nav., Imp., 6s, 80; Delaware Division Canal, 40; Camden and Atlantic 1st mort., 82½; Philadelphia and Erie shares, 18; Huntington and Broad Top 1st mort., 85; do., 2d mort., 68; Susq. Canal Bonds, 38, Delaware R. R. mort., 95; Phila. and Trenton R. R., 140; Camden and Amboy 6s, 1870, 101½; Chesapeake and Del. Canal 6s, 90; Pittsburg, Ft. Wayne and Chicago 3d mort., scrip, 76; 17th and 19th sts., horse R. R., 10; 5th and 6th sts., 50; 2d and 3d sts., 2d mort., 107½.

Baltimore.—Maryland 6s, 1890, 107; North Western Virginia 1st mort., 100; do., 2d mort., 95; Baltimore City, 6s, 1870, 106; Baltimore and Ohio bonds, 1867, 101½; Maryland 5s, coupon, 108; Maryland Copper Co., 1; Canton Co., 19; Guilford Mining Co., 49.

Hints to Railway Managers.

One of the greatest embarrassments under which we labor is the want of the regular Annual Reports of the various Railroad Companies. Without them, we cannot make our Share and Bond Lists as correct as we could wish. The former is an *annual* table—designed to give at a glance the operations of each road during, and its condition at the close of, its last financial year. The latter can be corrected at any time, so as to correspond with the figures as they stand recorded upon the books of the treasurer.

We should suppose that the managers of our railways, nearly every one of which receive the Journal weekly, would take pride and pleasure in supplying to us the data for this purpose, not only by forwarding to us their Annual Reports promptly as issued, but also in correcting the figures in the tables opposite their own roads, which they can do much more readily than we, even with the reports before us. To a number of companies we are indebted for such assistance. The Journal is much sought after for such information; and if correctly given in our columns, it would relieve the companies from many annoying applications to which we know they are now continually subjected.

A glance at our Share List will show the information we require: the gross and net earnings; mileage and condition of rolling stock; cost of road and equipment; share capital; bonded and floating debt, etc. For the Bond List: the amount and description of the various classes of bonds; the date of maturity of the same; rate of interest; and when and where the coupons are payable. This latter feature we propose to add immediately to the List.

This information is of the greatest value to the stock and bondholders in these companies, and those who wish to invest in their securities. Particularly is it important at this time when money is becoming so abundant, and as a necessary consequence, investments are likely to be made in them to an unusual extent.

In order to present their condition accurately, it is necessary to have regular *official* statements of their operations, not only from year to year, but from month to month—week to week. We therefore solicit from Railway Managers not only their yearly, but also their monthly and weekly statements—for the latter of which we regret to say we are mainly dependent upon the daily papers.

During the past year, the traffic of our railways has been unusually large and profitable, and the prospects of the future in this respect were never more bright. Injustice is done, therefore, to the shareholders and the public by the omission to give publicity to their success.

Our railway system was almost in its infancy when this Journal gave it its support; and it has never faltered in discharging its duty to the companies themselves, or to the public which fostered them. Vast is the difference between those days of doubt and despondency, and the present palmy ones of high credit, efficiency and good dividends. We wish, therefore, to record the advances in their prosperity as faithfully as we watched their incipient steps. To do this, we require the co-operation of the intelligent managers of our railways in the manner stated, and we trust they will cheerfully aid us in our purpose to make this *the* Journal of the system, and as perfect a record as possible of its cheering progress.

Seely's Improved Ridged Iron Cars.

This country has the largest coal measures and iron fields in the world, sources of inexhaustible wealth, and incentives to the industry of our mechanics, and the genius of our inventors. Its application to useful purposes are daily growing more numerous, some of them adopted at once, others of slower reception. All, however, that appears wanting to ensure the adoption of many of them without unnecessary delay, is to make them thoroughly known. It is with this purpose we call the attention of our readers and railway travellers especially, to the recent improvements effected in the construction of railway cars by S. J. Seely of Brooklyn. This gentleman after long and meritorious service in our navy, has devoted himself to the introduction to the public of his improvements in the use of iron materials for various purposes, all of them of value, and all of them practical. Among others he has brought to perfection the construction of railway cars for freight or passengers, on long lines of travel, and on City roads. His principle is a vast improvement on what is known as the corrugated form of the metal, exceedingly valuable however, for many purposes.

It has been attempted to use this material in the construction of cars, but one great difficulty has occurred, in the fact, that in forming the curves or ribs, the metal is strained and expanded and the fibre weakened when giving it the shape required.

Mr. Seely has avoided this by raising the ribs from a plain surface so that a *compression* of the fibre at the angles takes place, thus giving it more cohesion and tenacity than the plain surface itself possesses. The consequence is, his upright ribs will sustain an enormous weight, and so also the horizontal, and inclined. Thus every part is firm and strong, equal to any imposed weight. His braces and supports of the bottom of the car are made of angle and T iron arranged in an original manner so as to superadd solidity to strength.

We have seen his model of a freight car, which is to be taken to Washington for Government inspection, and it is an admirable specimen of ingenuity and good workmanship. It represents the following principle, that compared with any wooden car of similar dimensions, it is one half lighter, or in the proportion of 5,000 lbs. to 10,000 lbs., the ordinary weight. It is infinitely stronger, almost imperishable, unaffected by weather, requiring no expensive sheds for protection, is easier shunted by hand, and but very little more expensive than its wooden prototype.

But it has larger merits. As a means of military transport, it carries men and munitions of war with perfect safety, being incombustible and impervious to musket or rifle balls. These are great advantages, particularly when in our own day, armies are so commonly moved over the rails, and so many soldiers are destroyed by the enemy's marksmen in ambush as they pass along.

There is another very great superiority in Mr. Seely's cars. They have curved ends and arched roofs, which besides being elements of strength themselves, turn off the shots fired against them when in motion, and above all they are almost beyond injury from collisions, or running off the tracks. Their great strength is such, in case of collision with another car, that although there might be indentations, and a partial collapsing of the parts struck, there would be no breakage, no splinters, no flying bolts or bars to destroy life or limb. If it were thrown down an embankment it would still maintain its shape and preserve its inmates from injury by fragments. These two last advantages would indicate the necessity of constructing ordinary passenger cars on the same principle, as they would be almost indestructible by ordinary railway accidents.

The witty Sidney Smith said that certain improvements would never take place in the management of British railways, till they had killed a Bishop. We hope our own railway managers will not put off the introduction of these raised-iron cars until they have lost some of their Presidents and Directors.

Mr. Seely has carried his principle even to a higher realm of art. We have seen at his office in Reade street plans of a variety of dwellings for town and country, all of iron, and though the price of this article is enhanced by the war, he can construct with it at lower rates than our builders in brick and stone. A beautiful Italian villa with double walls, all the modern improvements, 45 by 75, with a tower worthy of Palladio, bay windows verandahs and porches with the prettiest effects, can be put up for about $8,500, ⅗ of the cost of a building of the same elegance, in the usual materials. When we calculate the cost of continually repairing our hastily built and perishable edifices either in town or country, and remember that the iron house requires no such outlay, we must admit the difference is vastly in favor of Mr. Seely's structures.

We may say more at another opportunity, on the interesting details of construction; our only object now, is to call the attention of the Government to the importance of adopting the iron cars as soon as possible, if it means to follow the enemy rapidly into their own haunts, and also of our railway Companies, to the importance of protecting the traveling public from accident, by every means in their power. They should not wait till their present cars are worn out, for human life is too valuable to be unnecessarily risked on rail-

ways when there is an opportunity now offered of giving it almost entirely immunity. Railway traveling is now in advance of all other kinds, let it be made secure.

Special Meeting of the Chamber of Commerce.

[Reported for the Railroad Journal.]

The Chamber of Commerce met on Tuesday last, at 1 o'clock, to take into consideration the recent destruction of the Ship Brilliant and other American Vessels by the Confederate Steamer Alabama, or "290," as she is also called. A preamble, resolutions, and a very effectual, yet modest speech, from Mr. Lowe, a well known merchant in the China trade, were approved unanimously and will be published. The point of the whole was, that the Alabama had been built in an English port, was manned by English sea men, sailed off under the English flag, and proceeded to sea to destroy our commerce, with the aggravation of burning her prizes at night, so as to allure humane Captains to the spot, and thus more easily capture them. The resolutions appealed to the humanity of the British people, to interfere and prevent any further outrages of this character, inasmuch as any British or other Steamship or vessel on fire at sea at night would hereafter be left to its fate, for fear of capture by an enemy lying in wait.

Captain Marshall made a report on the subject of encouraging foreign emigration, in conformity with an official suggestion from the Secretary of State, previously addressed to the chamber. His plan is for the ship owners to reduce the price of emigrant passages from £3.10 as now, to £2.10, provided the State of New York will release the Emigrant tax. Mr. Toucey, the well known publisher, inquired why the ship owners could not take off the £1, any how? The question was not answered, but a vote hurried through, and the report was adopted. Mr. Tileston made a very excellent speech to show the advantages of immigration at this time to foreign laborers in consequence of the high wages paid to mechanics, especially in wood and iron, while at the same time, food such as meat, flour, potatoes and other vegetables, and rents and clothing, are in fact not so dear now as they have been in the most peaceful times.

The Chamber then adjourned.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Oct. 10th, 1862, was as follows:

Passengers	$27,019 78
Freight and live stock	34,053 44
Mails and sundries	1,641 82
	$62,715 04
Corresponding week of last year	54,131 65
Increase	$8,583 39

The receipts of the Grand Trunk Railway of Canada for the week ending October 4, 1862, were:

Passengers	$25,430 10
Mails and sundries	2,962 10
Freight and live stock	61,127 14
Total	$89,519 34
Corresponding week of last year	87,299 94
Increase	$2,219 40

Some of the Results of the last Census.

In the loyal States there are 4,417,130 horses, in the seceding States, 1,698,328; in the former, 1,383,430 working oxen, in the latter, 856,645; in the former, 7,744,128 other cattle, in the latter, 6,927,277.

The total value of live stock in the former is, $716,527,942, and in the latter but $390,962,274.

The total value of farms is in the one case $4,779,983,587, in the other but $1,870,938,920.

The value of live stock of the North is equal to the whole war debt.

The white population in the loyal States and territories in 1860, was 21,526,107, in the 11 seceding States, 5,449,463.

Railroad Earnings--Monthly.

The earnings of the St. Louis, Alton and Chicago Railroad for Sept., 1862, were	$95,969 04
Do., 1861	75,316 50
Increase	$20,654 54
The earnings of the Erie Railway for Sept., 1862, were	$764,447 70
Do., 1861	515,947 69
Increase	$248,500 01

The approximate earnings of the Pittsburg, Fort Wayne and Chicago Railway during the month of September, compared with the same period last year, were as follows:

	1862.	1861.
Freights	$193,664 18	$154,144 90
Passengers	185,088 15	98,018 42
Express	2,600 00	2,500 00
Mails	7,825 00	7,825 00
Rent of railway	7,088 38	7,088 38
Miscellaneous	803 43	514 42
Total	$397,064 09	$270,086 07
Earnings, Jan'y 1, to August 31	2,211,169 04	1,804,882 15
Total to Sept. 30	$2,608,233 13	$2,074,968 22
Increase		$533,264 91

Fox Lathes—Elevators—Babbitt Metal.

We call the attention of our readers, particularly those engaged in the construction of stores, factories and warehouses to the advertisement of F. W. Bacon & Co. The Elevators are a decided improvement on all other plans of the kind, and give absolute protection to those engaged in hoisting goods. Upon a particular examination of the Elevators we shall refer to them again.

Canada Circulation.

We learn from the *Montreal Gazette* that the money in circulation in Canada is "nearly altogether American," and that a Canadian bank bill "is good for the eyes." It thus appears we have not only to provide a circulation for ourselves but also for our good friends in the Canadas.

☞ The U. S. of Columbia under the Presidency of Gen. Mosquera is steadily remitting on account of its foreign debt, incurred under a former and reckless administration. On the 4th of October, Baring Bros. & Co., London, received quite a large amount of dividend funds, from Carthagene, Saranitta and Santa Martha.

☞ The British manufacturers of fire arms, and ammunition are exporting to this country at the rate of £1,750,000 per annum, for the first eight months of the present year the amount having reached £1,308,000.

British Investments in Foreign Stock.

British Capital having withdrawn much of its interest in American securities has sought some other fields of speculation during the last year. We find the following statement in the London Money Market Review, which shows the direction of its investments during the last year.

Turkish	£8 000 000	stock.
" Caimes	8 000 000	(estimate.)
Portuguese	5 000 000	stock.
Venezuelan	1,000 000	"
Russian	4, or 500 000	doubtful.
Egyptian 1st issues	£2.195 200	stock.
" 2d "	1 097 600	"
Italian	1.338,000	"
Moorish	501,200	"
Peruvian	5,500,000	"

(less old converted stock.)

It is indeed singular that while such securities pass current in the London Market, those of a country, (the U. S.) which has always paid its public debt should be at a discount. If it is said our troubles make the difference, we would ask if there are no troubles in Turkey, Venezuela, Italy, Morocco and Peru?

The Payment of Interest on the City Debt.

AN ACT to reduce taxation in the city of New York, by applying to that purpose the surplus revenue of the sinking fund for the payment of interest on the city debt. Passed April 9, 1862—three fifths being present.

The People of the State of New York, represented in Senate and Assembly, do enact as follows:

Section 1. It shall and may be lawful for the mayor, alderman and commonalty of the city of New York to transfer the surplus revenues of the sinking fund for the payment of interest on the city debt, at the end of the present and every future year, to the fund known as the general fund of said corporation, to be applied to the diminition of the taxes of said city, as hereinafter provided.

Sec. 2. It shall be the duty of the comptroller of said city to prepare and submit to the board of supervisors of the county of New York, at least four weeks before their annual meeting, in each and every year, for the purpose of imposing the annual taxes, a statement setting forth the amounts by law authorized to be raised by tax in that year, on account of the corporation of the city of New York or for city purposes within said city, and also an estimate of the probable amount of receipts into the city treasury during the then current year, from all the sources of revenue of said general fund, including such surplus revenues from the said sinking fund; and the said board of supervisors are hereby authorized and directed to deduct the total amount of such estimated receipts from the aggregate amount of all the various sums which by law they are required to order and cause to be raised by tax in said year for the purposes aforesaid, and to cause to be raised by tax only the balance of said aggregate amount, after making such deduction.

Sec. 3. It shall not be lawful for the said mayor, aldermen and commonalty to make or cause to be made any alteration of rates or charges affecting any item or source of the revenues of either of the sinking funds of said city or of the general fund aforesaid which may tend to a diminution of the receipts from such sources of revenue, or either of them; and all the revenues of said corporation not by law otherwise specifically appropriated, shall, when received into the city treasury, be credited to the said general fund, and said revenues are hereby appropriated and shall be applied exclusively to the purpose specified in the second section of this act.

Sec. 4. All acts and parts of acts heretofore passed, inconsistent with the provisions of this act, are hereby repealed; such repeal to take effect from and after the passage of an ordinance by the said mayor, aldermen and commonalty, authoriz-

ing and directing the transfer of the said surplus revenues of the sinking fund for payment of interest on the city debt to the general fund aforesaid at the end of each year, as provided in the first section of this act.

SEC. 5. This act shall take effect immediately.

IRVING HOUSE,

No. 45 TWELFTH ST., corner of BROADWAY.

Among the many excellent hotels in this city is the *Irving House*, where strangers, travellers and citizens will always find the best accommodations, and very moderate charges. The proprietors, Messrs. NASH & HUNT, have graduated in the best institutions of this kind in the country, and are worthy of the highest diplomas as accomplished masters of their art.

The Currency Question.

The currency still continues to be the absorbing question with the public. The advance in gold from 125 to 138, in one week, naturally created great alarm, and has already led to steps to check, if possible, the apparently rapid tendency to a still further advance. The late rise is attributed to speculation, stimulated by the fact that the Banks have been freely lending on gold at, of course, very small margins. Their example has been followed by other moneyed institutions and capitalists, who with the banks have really been doing all they could to put entirely beyond their ability the payment of their debts, in the only currency known to the Constitution, and the only one based on natural laws. It is now proposed that all such loans shall be discontinued, so that the price of gold may be the actual measure of the depreciation in the governmental currency that has taken place. It is also proposed, with doubtful success, to strike gold from the list of articles dealt in at the Stock Exchange.

The first measure should be instantly adopted, for the good of the Banks as well as of the Government and the public. These institutions must some day resume specie payment, unless, under the expansion that may be created, they become completely wrecked. The difficulty in returning to a specie basis will be inexact ratio to such expansion. The Banks cannot strike a more fatal blow at their own interests than by encouraging it. Some of the leading institutions are beginning to see the mischief already done, and are endeavoring to retrace their steps. Others may persist in their past policy. Still, we think, a majority will call in their loans on gold, and decline to make such in the future. We trust they will be sustained in their course by the Trust Companies, and by individual capitalists. With regard to the Stock Exchange, we should regret to see gold stricken from its books. This would be a most prejudicial measure. There must be some place at which to compare opinions as to the relative value of gold, and no place is so suitable as the Stock Exchange. To forbid transactions in that, would have the effect to put us still more widely at sea.

It is of the utmost importance that the market price of gold, or what is the same thing, of Treasury notes, should exactly correspond to its true value. Nothing can be gained by having the two at any time differ. It is always for our interest to know just where we stand. The tendency of the proposed action of the Banks will be to limit transactions in gold to the business wants of the community, and thereby to check excessive fluctuations in price. But it does not propose to touch the source of the evil, only to guard against its exaggerated effects. The matter of a further rise is entirely another question. The action of the Banks may cause a decline to a point far below the actual value of the precious metal; a decline from which, of course, there must be a speedy recovery. In fact, the highest point yet reached may be speedily passed. This depends upon the action of the Treasury. If Mr. Chase avails himself of the full provisions of the law for the issue of Treasury notes, the highest prices yet paid may soon be considered as very low. The uncertainty as to the future is one of the worst features in the present state of affairs, as the volume of the currency bears no relation whatever to the property of the country or to its wants,—only to the necessities of Government.

The only remedy is for Government to abandon its attempt to furnish a currency for the people other than that of gold and silver. The experiment it is attempting is impossible of success. There can be no currency of paper which does not represent corresponding values of personal property actually existing—property in a form fitting it for immediate consumption. A Bank bill is a title deed to a corresponding portion of the capital of the Bank issuing it. The Bank to have its notes obtain circulation, must have its assets in such shape that they can be speedily converted into gold. The bills of such Bank are merely used to transfer its capital from hand to hand. Where they do not make such transfer, in consequence of the want of means of the Bank, they will no longer be taken, for the reason that it is the substance not the symbol which is the object sought. It is of no avail that the Bank may have rich stockholders who are liable for its obligations. It may be years before their property can be reached, to make good their promises. Now, the Government has assumed what from the nature of the case is an impossible function. It issues its notes, but these are not drawn against any accumulated means, nor do they transfer a corresponding amount of existing property, when they pass from hand to hand. They are simply the obligations of Government to provide such property for their payment at a future day. Now, such promises have none of the attributes of money. They are symbols, where the substance is wanting. We can imagine a law which shall pass *real estate* by the delivery of a title deed; but we cannot imagine a state of things which should cause a title deed to pass as currency at the nominal sum expressed in it that did not refer to, nor entitle the holders to take, any portion of that of the party issuing such deed. The case of Government is precisely parallel. We do not doubt its ability ultimately to make good all its obligations, but its notes not payable presently, are not money, neither do they possess any of the attributes of money. To attempt to make them serve as such, is the impossible problem a thousand times repeated but never without signal failure, with the most disastrous results.

At the same time we re-iterate the position previously urged by us as to the effect of a governmental currency upon the Share Market. The volume of this currency must continue to be increased. The Banks will add to the volume of paper money. No contraction for the present can be looked for. The Government has absolved the people from all obligations to meet their liabilities in gold and silver, the only currency based on natural laws. The market may temporarily react, but as far as it depends upon the question of money or currency, it must yet experience considerable advance, for the reason that good dividend paying stocks are more valuable than the currency at the prices it is now selling for. We can see no prospect of a stringent money market ahead. The deposits at the Banks equalling $165,000,000 indicate a plethora rather than a scarcity. Any movement for depressing price will be speedily reversed by the abundance of money. Such has been the history of the Stock market from the issuing of the Treasury notes, and will continue to be till steps are taken for a return to a specie basis.—*Hallett's Financial Circular.*

Prospectus of the American West India Company.

Capital stock $1,000,000.—Divided into ten thousand shares of $100 each. Office No. 6 Pine street. *Trustees*—HIRAM KETCHUM, No. 29 William street; WILLIAM L. CAZNEAU, Santo Domingo City (late United States special Envoy); RICHARD B. KIMBALL, No. 49 Wall street; GEORGE F. DUNNING, Superintendent United States Assay Office; JOSEPH W. FABENS, No. 6 Pine street. HIRAM KETCHUM, *President.* JOSEPH W. FABENS, *Secretary.* GEORGE F. DUNNING, *Treasurer.*

This company is organized under the General Mining and Manufacturing law of the State of New York, with the object of developing on a scale of magnitude proportionate to their vast capacity, the great mining, manufacturing, agricultural and commercial resources of certain tracts of country in the West India Islands. It is proposed to commence operations in the Island of Santo Domingo. The fertility of the soil, productiveness of the mines and great wealth in forest woods of this island, are unrivalled on the globe. Its geographical position is very advantageous, being within five days' steaming of the port of New York, and actually some days nearer to us than New Orleans, Mobile and the ports of Texas. Its coast abounds in good and secure harbors, and it possesses remarkable facilities of internal communication in its numerous and navigable streams. The company have already secured by purchase and bond a clear and indisputable title to some of the most inviting districts upon the island, comprising lands of mahogany, satin wood, oak, fustic, lignumvitæ and extensive tracts of logwood. The cutting and shipping of these woods, and the manufacture of dyestuffs will be a principal branch of the company's business. They have also secured by bond the control of a large portion of the copper region on the south side, which, it is believed, fully equals the famous copper bearing district of the south side of Cuba. They are, sole owners, by purchase, of the townships of Azomante and Palenque—the former of which is in the heart of the most fertile agricultural region of the island—situated fifteen miles from the capital, at the head of navigation of the Isabella river, with a royal paved road from the town to the landing. Palenque is situated on the south side of the island, about twelve leagues west of the capital. It has the best harbor on the south coast, and is the natural port of the inland towns of Bani, Nisao, Maniel, Yaguate, Savanna Grande and San Christoval. Its position is unrivalled for healthfulness of climate, beauty of scenery and fertility of soil. A recent traveler, well known in political and literary circles, writes to the former proprietor of these tracts. "As much as I have traveled in Texas, Mexico, Central America and the Antilles, never have I met with such locations as Azomante and Palenque for the prompt and profitable foundation of extensive colonization plans. Both are good town sites. Palenque in particular is one of rare advantages. Nature has done almost everything to your lands, and colonists coming here cannot fail to be delighted. The government is prepared to declare it a

port of entry as soon as you make the demand." It is the purpose of the company to have their lands surveyed into suitable lots and homesteads for distribution among actual settlers and members of the company at a small advance on cost. Each share of stock will be represented by, and redeemable in twenty acres of land, or a lot of ten thousand square feet, in the town of Azomante or Palenque. It will thus be seen that the stock represents a positive and sufficient value, without taking into account the mining, manufacturing and commercial advantages held by the company. In addition to the above specified tracts, the company have purchased the estates of Esmeralda and Sylvain, comprising about fifty acres of land adjoining the walls of the capital, which they propose to divide into town lots and erect thereupon suitable suburban residences, thus bringing this eligible and valuable domain into market forthwith. There is no doubt that this enterprise will be a source of great profit to the company. Actual settlers not in the employment of the company can find highly remunerative occupation in the cultivation of the soil. Cotton grows spontaneously on the south side of the island, and with culture can be made to produce largely. It grows upon trees which yield an average of 200 bolls each, and continue to bear from thirty to forty years. Four hundred trees may be planted to the acre, which may be made to yield, with proper care, 4,000 pounds of cotton. The island of Santo Domingo is undoubtedly destined to become a great cotton growing country, and those who give early attention to this culture will reap large profits. The absorbing problem of where our cotton is to come from may thus be satisfactorily solved. Sugar can be cultivated with equal promise of success. The cane on the south side grows to gigantic dimensions, sometimes reaching a height of 18 to 20 feet and a diameter of 5 inches. This staple requires but little care. It is cut at maturity, resprouts, and for six or seven years no replanting is necessary. An acre of land will produce from 3,000 to 4,000 pounds of raw sugar. Coffee is, perhaps, the most desirable culture for parties of small means. An acre of land will produce from 2,000 to 3,000 pounds of coffee, and one man can easily take care of five acres. Cocoa can be planted to advantage on the same tract with coffee. Its yield is large and productive. The cocoa tree continues in bearing for a century. Tobacco can also be raised to good advantage. It is equal in quality to the finest Cuba. Tobacco growers who will give this culture their attention cannot fail to become rich. Corn, rice and all the vegetable productions of the temperate as well as torrid zone can here be cultivated with profit. Fruits of all kinds known to the tropics abound, and can be successfully grown for home consumption and export. W. S. Courtney, Esq., in a recent work on "The Gold Fields of Santo Domingo." thus enlarges upon this point:—"In regard to the productiveness of the soil, suffice it to say, that notwithstanding its diversity and variety, it is prolific beyond anything found in the Antilles, and not excelled by that of the Italian Penisula or Sicily, to which it bears a strong resemblance. The sugar cane grows the year round, and so fast and thick that by the time the laborer has cut over and exhausted a ten acre field, it is ready to cut again where he began. The corn which is cultivated now by simply making a hole in the ground and dropping in the seed, with no further care or labor, grows to the height of from eight to fifteen feet, bearing three to five ears to the stalk. The tobacco, which is cultivated with as little scientific skill and care, spreads out the broadest, sappiest leaves found anywhere in the Antilles. Other crops, indigenous to the climate, grow with equal rapidity and strength. It is said that in some districts the melon, pumpkin and the squash ripen in six weeks from the seed. [The editor of the "Guide to Hayti," states that "at Port au Price radishes ripen in three weeks from the time of planting the seed."] Such a thing as a fertilizer—an article of such extended traffic and so necessary to the agriculturist here—is not known nor thought of there, nor will it, I apprehend, ever be required. The fertility and strength of the soil, containing all the elementary constituents required to produce and mature the various vegetable growths, could not be exhausted, even without any return to it, for generations. Besides, the mountains themselves, are the great fertilizers of Santo Domingo, and will remain so until they are devoured by the tooth of time and sink away in distant ages. The debris of these mountains, together with the decaying vegetation on their sides and tops, brought down by the frequent rains, supply the soil in the valleys, plains and savannas with abundant and incessant recruits. Its fecundity is a marvel to the husbandmen of those latitudes." More detailed information on the subject of the "Resources of Santo Domingo," may be obtained from an address delivered by J. W. Fabens, Esq., before the American Geographical and Statistical Society, and published by Putnam, 532 Broadway, to which please refer. It will appear from the facts therein stated that Santo Domingo offers more attractions to parties of small means, desirous of securing a comfortable and happy homestead, for themselves and their children, than any other country in our neigborhood. Its climate is mild and salubrious, and on this account it will, doubtless, prove an attractive place of resort for Northern invalids in quest of health. It is the purpose of the company to establish at once a line of packets to Santo Domingo, and trading posts at the different points occupied by the company, or the colonies introduced under their auspices. At these points there will be kept on hand, for the supply of settlers and others, the most essential commodities of life, and also a proper assortment of the best and most necessary implements of agriculture, particularly those required in the culture of cotton, sugar, coffee, tobacco, corn, &c., &c. It is expected that a large and profitable commercial business will thus be done. Applications for shares and other information may be made at the office of the company, No. 6 Pine street.

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,
RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. Geo. H. Fox & Co., of Boston.
Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.
They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.
The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.
ELEVATORS
For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.
They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.
Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order Steam and Water Gauges Gauge Cocks, Packard's Patent Ratchet Drills.
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.
BABBITT METAL.
Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.
Having made this branch of Engineering a SPECIALITY the past ten years with uniform success, they confidently offer their services to those requiring such aid.

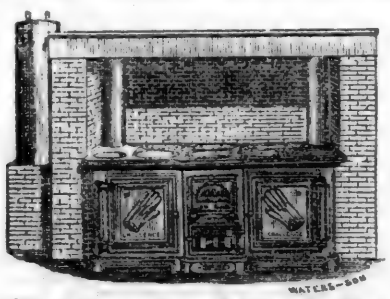
CUMBERLAND COAL.



THE BORDEN MINING COMPANY ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSELS AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are hoisting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in markets as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting or heating irons at the end. It is very economical in fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

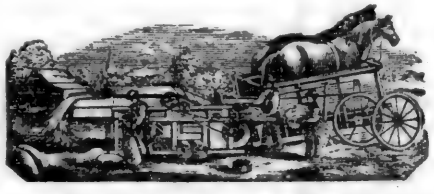
IMPORTANT
TO
RAILROAD COMPANIES.

THE ATTENTION OF
RAILROAD MANAGERS
Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the
ALBANY AGRICULTURAL WORKS,
CONSISTING OF
EMERY'S PATENT
Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.



WOOD SAWING MILLS.

These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.
The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.
They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.
Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.
For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, November 1, 1862.

☞ Letters, Communications, Pamphlets, etc., intended for this JOURNAL, should be addressed to the *Editor and Proprietor*, JOHN H. SCHULTZ.

NOTICE.—Inventors and scientific men wishing to introduce valuable improvements to the notice of the public, particularly such as relate to Railroads, Locomotives and Steam Navigation, will henceforward receive due attention from this JOURNAL, on the receipt of communications containing proper descriptions of those improvements; a gentleman competent to the task being connected with the proprietor for this purpose.

☞ Works on Railways and Railway Improvements, Steam and Steam Navigation, Science and Art generally, will hereafter be received at this office, and impartially reviewed.

To Engineers.

We publish in another column an advertisement of Sibell & Salisbury, calling the attention of Engineers, (and architects may notice it also,) to their Chrystalline Tracing Linen, a new and superior article. The kind formerly used was opaque, shadings could not be seen through it, and those draughtsmen who had weak eyes were much inconvenienced. Mr. Sibell was formerly one of our leading stationers, and has now resumed business to the great satisfaction of his old customers, who then knew where to find the best articles in his line of business, and will know where to find them now.

☞ We call the attention of our readers to the card of Messrs. BRITTON & WARNER, Bankers and brokers, 23 Wall street. Mr. Britton has been long and favorably known by his connection with the Stanwax Hall in Albany, and the Everett in this city. We hope the new house will be as popular (though in a different way) as the two with which he has heretofore been connected.

☞ We publish in this number of the JOURNAL, an elegant and instructive article on "French Architecture," quite confident that it will be admired not only by those of our numerous subscribers who are professional architects, but by our intelligent readers generally.

MINING IN THE PACIFIC STATES. Fourth thousand. By JOHN S. HITTELL. John Wiley publisher, 1862.

This is a neat volume containing, among other things, the history of mining in the Pacific States, an account of the mining districts, prospecting, assaying, gold quartz mining, silver mining, and the laws of mining in California. No publication on these subjects could come at a better time, now that the Pacific Railroad is to be constructed, and our vast mineral regions west are shortly to be filled up by fresh emigration. The National Government should consult this work, as it will no doubt be called upon to establish a general code of laws, for leasing, and governing the mines which are yet to be opened in California, Oregon, Colorado, Arizona and Lower California. Indeed every emigrant from this port to the mining districts should possess himself of this work, if he wishes to save time and money.

Massawippi Valley Railroad.

The engineers employed in the survey of this proposed road, have just completed their work. The route is found quite as favorable a was anticipated. The length of the road will be 27 miles, *i. e.*, from the Province Line to Waterville on the Grand Trunk. The heaviest grade, and that only a short one, is but 52 8-10 feet. This is intended to form the connecting link between the Stanstead, Chambly and Shefford and the Pas sumpsic. As soon as the engineers prepare their report, it is designed, to bring the project prominently before capitalists in New York, Boston, Montreal and Quebec.

The Navigation of the Mississippi.

The business community in the Western and North Western States are at present severe sufferers by the interruption of the navigation of the Mississippi. They now perceive what a hostile State might do if the Union was destroyed. Vicksburgh, one solitary city, has effectually broken up the internal trade of the valley, and but for the Northern railways which stretch themselves in great parallel lines towards the West, there would be no means of communication with other States and countries. Tennessee, Kentucky, and Missouri are especially affected by this interruption. To arrive at some estimate of this injury we give the following freight lists.

From St. Louis to New Orleans by water the cost is, or rather was, 20 cents to 25 cents per 100 lbs., and for flour per bbl. 40 cents.

From St. Louis to New York by railway the charges are:

1st class	$2.10	per 100 lbs.
2d "	1.70	"
3d "	1.40	"

4th class $1.20, and flour per barrel $2.40.

Now, as St. Louis annually manufactures about 800,000 bbls. of flour, the difference in freight on this article alone by rail instead of the river, is sixteen hundred thousand dollars. A writer, who has given the subject much attention, estimates that St. Louis, by the closing of the river navigation, and the interruption of the traffic of the Baltimore and Ohio Railroad, is paying six millions, and the Valley fifteen millions per annum additional charges on their business in consequence, and although it is an ill-wind which blows no one any good, and the Northern Railways have been enormous gainers by the change in the direction of the valley trade since the war, yet we hope the natural route may be opened again without delay, and that the Government will awake to the necessity of freeing the river trade as soon as possible. The Mississippi belongs to the whole nation, and its free navigation is indispensable to our future prosperity. It is not within the possibility of endurance that any one State, and cer-

tainly not Louisiana, should control this river or its outlet. The act which admitted that State into the confederacy contained the following section, and it was the first one in the act itself:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled.

That the said State shall be one and is hereby declared to be one of the United States of America, and admitted into the Union on an equal footing with the original States in all respects whatever, by the name and title of the State of Louisiana: *Provided*, that it shall be taken as a condition upon which the said State is incorporated in the Union, that the river Mississippi, and the navigable rivers and waters leading into the same and into the Gulf of Mexico, shall be common highways, and forever free, as well to the inhabitants of the said State as to the inhabitants of other States and the Territories of the United States, without any tax, duty, impost, or toll therefor, imposed by the said State; and that the above condition, and also all other conditions and terms contained in the third section of the act, the title whereof is hereinbefore recited, shall be considered, deemed and taken as fundamental conditions and terms upon which the said State is incorporated in the Union.

Thus the farseeing policy which prompted the purchase of Louisiana, was sustained at her adoption into the Union. The acts establishing the territories of Mississippi and Missouri, embodied similar principles, so that this great and noble river has been duly consecrated to a free internal trade forever. We can therefore warmly sympathise with our St. Louis friends and all others "along shore," at the condition of things which has been so disastrous to their interests. We trust an immediate movement will be made to reopen the trade of the river, and we think we perceive it is already begun. And when it is restored, we trust that our statesmen will hereafter be statesmen, and look carefully after the great interests of the West.

New Lines of Railway.

The people of this country will not be able, on the 1st of January 1863, to show that they have built from 2,500 to 3,000 miles of railroad, during the year now drawing towards a close. So far from having such a satisfactory review to make, there will, we think, be a considerable balance to carry to the wrong side of the profit and loss account, occasioned by the destruction of roads, bridges, depots, and rolling stock, together with the loss of those sources of revenue on which the roads depended. At the North this property will have appreciated in value, there can be little doubt, during the year; but in the insurrectionary States it will certainly have depreciated to a greater extent. It will be more than we expect, if at the end of the year the gains in one shall prove an offset in full to the losses sustained in the other section of the country.

In the loyal States we have already added several hundred miles to the railroads in operation last January. The New England States will be able to show little progress in this direction; but this arises from the system of internal communications having been all but commensurate with the wants of the people long before the war began. The same remark will apply substantially to this State, with the exceptions of the Adirondack region and the counties to be traversed by the Albany and Susquehanna Railroad. In both quarters improvement has been brought to a stand-still for the time being. Not so with the Walkill valley, however. A new line is in progress, bringing the richest portions of Orange and Sussex (New Jersey,) within easier communication with this city. The work on that road, we understand, is now being pushed forward vigorously, and no doubt remains that it will be carried forward to completion at no very distant day.

The State of Pennsylvania, though having in operation a greater number of miles than any of her Federal sisters, is as much intent as ever on the development of her vast internal resources by new railroads. The principal of these are the Philadelphia and Erie, now controlled by the Pennsylvania Railroad Company, and the Atlantic and Great Western. With these are progressing several others of less magnitude, chiefly in the oil regions of the Northwest—a section which until lately had been left comparatively destitute of such advantages.

The people of New Jersey are quietly but steadily pushing to completion three new lines of railway. The first of these has recently been opened from Raritan Bay to the Camden and Atlantic line, to be extended southward in due season; the second is being pushed from Camden South-eastward in the direction of Cape May. We learn that a considerable section of this was recently let to a contractor, to be finished in the early part of next year. The Morris and Essex extension westward is dormant for the present; but it is certain to be revived before long, as both the people of the Musconetcong valley, and those of Newark are interested in building it. The new road between Hoboken and Newark, which is properly the Eastern extension of the Morris and Essex, will be in running order in the early part of 1863.

Besides these, there are a number of new lines in progress or recently opened in the Western States, mention of which has been made, from time to time, in the columns of the JOURNAL. Still, these bear a very slender proportion to what the people of that section have been accustomed to build during a similar period. The railroad systems of all the trans-Mississippi States are still very imperfect, those of Kansas and Minnesota hardly begun. The ravages to which Missouri has been subjected, have effectually stopped the further construction of her Pacific line and the Southwest branch. The President in his last annual message recommended an appropriation to build the latter, as also the road through Kentucky to Cumberland Gap; but Congress did not see fit to act on his advice.

It must not be forgotten that a number of cities have been actually laying down street railways the present year, particularly Washington and Baltimore, both of which will soon be as completely intersected as this city or even Philadelphia.

With all, however, we shall come far short of our usual rate of progress. Instead of the ordinary 2,500 or 3,000 miles, it will be well if we can show an increase in the loyal States of 500 miles. With all our decline, it is questionable whether any State in Europe, or in all the world, India excepted, can show a more satisfactory record in this respect than the Northern and Western States of this country. If a destructive war has temporarily forced us to stop and breathe for a time, it is only that we may resume work with greater assiduity and success than ever, when our people shall address themselves in good earnest to the building of the great Pacific Railroad.

Against all this gain we have to present the lamentable offset of bridges and depots destroyed, tracks torn up, employees forced into the ranks of the insurrectionary army, and above all, the sources of prosperity so completely dried up for years that they will have to be created anew. The lines in the Gulf and South Atlantic States which depended on the transportation of *cotton*, are not only going wreck to themselves, but traverse a country which is fast losing the great staple in which its industrial prosperity and its political influence have hitherto principally reposed. Insanity itself could not have acted more madly, whether as respects the present or the future welfare of the Southern people.

Curious Statistics of Railways in England.

It is estimated that the Railways in England, Ireland and Scotland, annually carry six times in number, the population of Great Britain. It is an average day's work of its railways to carry 500,000 passengers, 258,000 tons of minerals and merchandise, 35,000 live stock, 1,100 dogs, and 740 horses. The trains, passenger and goods trains added together, travelled 2,897,748 miles more in 1861 than in 1860, which is equivalent to going round the world 116 times more last year than in the year before. 3,881,990 trains ran in the course of the year; that is to say, upwards of 10,600 a day, or more in a day than seven times the number of minutes in the day. If the trains had been equally distributed, running night and day without ceasing, they would have travelled among them 200 miles in every minute. The length of the line open increased by 436 miles, and became 10,869 miles; and the gross receipts of the year 28,565,355*l.*, considerably exceeded the interest of the national debt, and amounted to about 8 per cent on the capital. The total raised by shares and loans increased from 348,130,127*l.*, at the end of 1860, to 362,327,338*l.*, an increase of more than 14,000,000*l.* in the year. The working expenditure rose to above 48 per cent., and the net receipts only increased by about 130,000*l.*, or less than one per cent on the increase of capital. The net receipts were rather over four per cent on the capital. The accidents to passenger trains in which passengers were killed or injured were but 43 in number, causing the death of 46 passengers and injury to 781 more—one passenger killed or injured in about 220,000. In addition to this 14 accidents were reported to the Board of Trade in which no passenger was injured, and 20 passengers were killed through getting into or out of trains in motion, and 13 more through their own misconduct or want of caution. The number of passengers killed or injured, not through such rashness, but from causes beyond their own control, was—in 1858, 445; in 1859, 384; in 1860, 509; in 1861, 827. In the latter year the sum of 135,062*l.* was paid as compensation for personal injury. 128 servants of the companies, or of contractors, were killed in the year, 57 trespassers, and 17 persons crossing at level crossings.

It will be perceived by this last statement that the injuries on railways, in proportion to the numbers using them, are much smaller than might

be supposed. Taking the average of injured persons, the result is, that only one in three hundred thousand travellers is injured on British Railways in the course of a year.

Taxation of the Somerville and Easton Railroad Company.

THE PHRASE "ROAD WITH ITS APPENDAGES," DOES NOT INCLUDE THE EQUIPMENTS, CARS, ENGINES, OR OTHER PERSONAL PROPERTY, BUT IS APPLIED TO THE REAL ESTATE.

By a supplement to the act to incorporate the Somerville and Easton Railroad Company, approved on the 23d of March 1859, the company were required, within six months after the date of the said act, to pay to the Treasurer of the State of New Jersey the sum of $13,120 19, the amount of arrears of tax reported by the Treasurer to be due. In default thereof the Company and the Treasurer with the aid of the Attorney General were authorized and required to submit all questions between them in reference to the amount of the tax to the opinion and judgment of the Supreme Court of the State.

The Company had paid a tax on three items, which were included in their annual report, viz., on the cost of the road, land, and works at Elizabethport station, houses and shops. The Treasurer claimed that the company were also bound to pay a tax on three additional items, also included in their annual report, viz., upon the cost of engines, cars, and ferry interest and boats.

The question thus at issue between the Company and State Treasurer, viz., whether the company by the terms of their charter, are required to pay a tax upon the cost of their road alone, or upon the entire outlay of the company, including not only the cost of the road and its appendages, but also of its equipments, were submitted to the consideration and determination of the Supreme Court, upon a case made for this purpose. The case was argued before Justices Green, Vredenburgh and Whelpley, and the Court hold, that the Company are only required to pay tax upon the cost of their road and its appendages, and are not bound to pay a tax upon their engines, cars, boats, or other personal property. That the phrase "road with its appendages" in a railroad charter, does not include the equipments, cars, engines, or other personal property of the company, but is applied to the real estate.

The following is the main portion of the opinion of the Court.

GREEN, CHIEF J.—The question arises upon the eighth section of the supplement to the company's charter approved March 17, 1854. That section requires the Treasurer of the company to pay annually to the Treasurer of the State, "a tax of one half of one per centum upon the cost of said road, as shown by the annual report of such cost made the year preceding." By the terms of the enactment, the tax is limited to the *cost* of the *road* only; and whenever the term occurs in the act, it is obviously used in its limited and appropriate sense. But the annual report, by the express requirement of the act includes the cost of the road and its equipments. And it is argued that the legislature, in requiring the tax to be paid on the cost of the road, as shown by the annual report of such cost, intended to include the entire cost of road and equipments, as exhibited in the report. The natural inference would seem to be directly the reverse. The annual report by the express provisions of the act of 1852, includes the cost of the road and equipments. The act of 1854 requires the company to pay tax on the cost of the road only, thus distinguishing clearly between the road and its equipments, and imposing the tax upon the former only. *Expressio unius est exclusio alterius.*

The language of the act of 1854 standing alone, is too clear to admit of doubt. But it is insisted that, in arriving at the true construction of this act, regard must be had to the provisions of the 14th section of the original charter of 1847, which regulated the payment of taxes by the company. That section provides that as soon as the railroad with its appendages, shall be finished so as to be used, the President and Treasurer shall file in the office of the Secretary of State, under oath or affirmation, a statement of the amount of the cost of said road, including all expenses and the amount of all purchases made by virtue of this act; and annually thereafter shall make a statement of the proceeds of said road, until the net income of said road shall amount to six per centum upon the amount of its cost; and as soon as the net proceeds of the said railroad shall amount to six per centum upon its cost, the said corporation shall pay to the treasurer of this State a tax of one half of one per centum on the cost of said road.

The clause in this section requiring the company to file "a statement of the amount of the cost of the road, including all expenses and the amount of all purchases made by virtue of this act," is certainly broad enough to include as well the cost of the equipments as the cost of the road itself. It was stated upon the argument, that such had been the practical construction given to other acts of similar import by the companies themselves; and it may be that the legislature designed that the statement filed should include the entire outlay of the company, as the basis or capital upon which the net proceeds of the road should pay six per cent interest. And if this be conceded, it by no means follows that the legislature designed by the clause now in question to include the cost of the equipment of the road, as a part of the cost of the road upon which the tax is to be assessed. It would be doing no violence to the language of the enactment to regard it as requiring simply that the statement to be filed in the office of the Secretary of State should include both the cost of the road and all expenses and purchases made by the company by the virtue of the act without any design of confounding two things essentially distinct, or of designating the cost of equipment as a part of the cost of the road. When the net income of the road is to be ascertained the cost of the equipment is to be taken into account. It constitutes a part of the cost of operating the road, but is no part of the cost of the road itself. But whatever interpretation, in practice, may have been given to this or similar provisions. I apprehend that the foregoing is not the true interpretation of the act, and is not in accordance with the expressed intent of the legislature. The requirements of the law may be fully answered, and the fair import of its language expressed by confining its meaning exclusively to the cost of the road and its appendages. The statement is to be filed as soon as the railroad with its appendages shall be finished so as to be used. It may be filed before the road has been equipped, or a dollar expended on that account.

It is to be a statement of the cost of the road, and is to include all the expenses and the amount of all purchases made by virtue of this act; i. e. all the expenses of the construction of the road, and its depots, car houses, engine houses, and other appendages, and all purchases of land and materials for their construction authorized by the act. * * * * *

It is not denied that the cost of the road, as well by the existing act of 1854, as by the original act of 1847, includes the cost of the railroad and its appendages. But what are the appendages of a railroad within the meaning of the act? An appendage is something added as an accessory to, or the subordinate part of another thing. Engines and cars are no more appendages of a railroad, than are wagons and carriages appendages of a highway. Both are equally essential to the enjoyment of the road—neither constitute any part of it.

In an opinion of Mr. Thompson, the Attorney General of the State, in relation to the charter of this company filed in the treasurer's office on the 5th of January 1855, the treasurer is advised that engines and cars are appendages of the road within the meaning of the legislature. But I think it will be found on examination that this phrase is never used by the legislature in railroad charters in any other than its ordinary and popular sense. It is never used to include the equipment, rolling stock, furniture, or other personal property of the company, but is invariably applied to its real estate—to the accessories of the road itself. This will be illustrated by a reference to the earliest of the railroad charters, that of the Camden and Amboy Company. * * *

The term will be found to be used by the legislature in the same sense in the charter of the Paterson and Hudson River Railroad Company, of the New Jersey R. R. Co., of the New Jersey, Hudson and Delaware R. R. Co., of the Delaware and Jobsontown R. R. Co., and of the Somerville and Easton R. R. Co.

The judicial construction of the term has corresponded with the sense in which it has been used by the legislature. In the case of the State *vs.* Mansfield, Mr. Justice Potts in delivering the opinion of the court said, "Power to construct a railroad and establish transportation lines upon it, necessarily includes the essential appendages, required to complete and maintain such a work, or carry on such a business, as the power to erect and maintain suitable depots, car houses, water tanks, shops for repairing engines &c., houses for switch and bridge tenders, coal or wood yards for fuel for the use of their locomotives. Of the same character are bridges, viaducts, wharfs, piers, and other similar erections, which may be either convenient or necessary appendages of the road, or may be especially authorized by the charter of the company. But invariably the term is used to denote an accessory of the road, something connected with it, and either essential to its completion or to its advantageous and convenient operation.

I am of opinion that the company by the terms of their charter, are required to pay tax upon the cost of their road and its appendages, both such as are essential to its existence and operation, and

such as are specially authorized by its charter; and that they are not required to pay tax upon the cost of their engines, cars, boats, or other personal property; and that, consequently, upon the case stated there is nothing due from the Company to the Treasurer.

Railroad Earnings--Monthly.

The following statement shows the business of the Philadelphia and Reading Railroad Company for September, 1862, compared with that of 1861:

	1862.	1861.
Rec'd from coal	$361,721 53	$162,130 97
" " merch'dise	38,050 01	32,108 55
" " travel, etc.	49,222 68	39.216 52
Total	$448,994 22	$234,456 04
Transportation, roadway, dumpage, renewal fund and all charges	178,105 89	123,620 96
Net profit for the m'th,	$270,888 33	$110,835 08
Profit for the previous 9 months	1,259,081 00	1,023,686 43
Tot. net profit 10 mos.	$1,529,969 33	$1,134,521 51

The receipts of the Norwich and Worcester Railroad for September showed a very favorable condition of the traffic. The earnings were:

	1861.	1862.
Passengers	$13,348 00	$18,424 00
Freight	18,620 00	21,395 00
Total	$31,968 00	$40,319 00
Increase		$8,351

The following is a comparative statement of receipts of the Catawissa Railroad Company:

For Sept., 1861, less connecting roads	$15,845
" 1862, " " "	26,140
Increase	$10,295
Whole receipts for 1861, from Jan. 1 (nine months) less connecting roads	$150,300
Whole receipts for 1862, from Jan. 1st to Sept. 30 (nine months)	199,900
Increase	$49,600

Inter-Colonial Railway in the British Provinces.

We have already expressed an opinion of the importance of this project. We are happy to learn that the delegates appointed to consider the proposition of the late Duke of New Castle have come to the following conclusion:—Canada agrees to provide for five-twelfths of the amount and New Brunswick and Nova Scotia for the remainder. The capital necessary to construct the road is estimated at 3,000,000*l.*, the interest upon which, at the rate of four per cent., will be 120,000*l.* per annum, and of this sum Canada is to guarantee 50,000*l.*, New Brunswick 35,000*l.*, and Nova Scotia 35,000*l.* These terms appear to be generally considered satisfactory, and it is not likely that there will be any difficulty experienced in procuring a ratification of the arrangement by Legislature. There is little doubt that, under judicious management, the road can be constructed for less than 3 000,000*l.*, especially if the shortest and most direct—in other words, the central route is adopted; and when in working order, it can easily be made at once to pay working expenses, which would leave the amount guaranteed intact for purposes of dividend; while, as the population increases, the earnings would, of course, advance in proportion and the stock would ultimately become valuable. The question of route, however, is still undecided—at least, no information of any decision regarding it has yet reached us.

Australian and Indian Trade.

The following statistics, taken from the London *Money Market Review*, relate to Australia and New Zealand, for 1860:

	Population.	Revenue.	Imports. Declared Value.	Exports. Declared Value.
		£	£	£
Victoria	548,412	3,257,734	15,622,891	13,867,860
New S'th Wales	348,546	1,511,964	6,697,053	4,748,049
Queensland	28,056	160,000	521,695	609,794
South Australia	117,967	511,927	1,507,494	1,655,876
Western Australia,	15,593	57,945	126,315	93,037
Tasmania	81,492	429,425	1,163,907	1,193,898
Totals	1,140,066	5,807,977	25,016,731	21,430,802
Per head of total population		£5 1s.10½d.	£21 1s.1½d.	£18 15s.11½d.
New Zealand	83,919	459,649	1,551,030	551,484
Per head of total population		£5 9s.10½d.	£18 9s.7½d.	£6 11s.5d.

The exports from all the other British colonies for the same year are stated to have been only £34,301,533 in value.

If the Indian empire, with its 180,000,000 of people, imported per head to the value of 10s. only, instead of £1 1s. 1½d., as in Australia, her import trade would figure at £90,000,000.

When the Pacific Railway is completed, we shall successfully compete for a large share of this trade, for San Francisco will be the nearest favorable port, and New York will only be six days from San Francisco.

Minnesota and Pacific Railroad.

The Directors of the Minnesota and Pacific Railroad met at St. Paul and resolved to run their road up Main street, St. Anthony, and to have it running there in two weeks, or to extend the road to Anoka this fall, and to St. Cloud next season. Some of the St. Anthony people oppose the Main street route and may be able to compel delay; but if not, the company will doubtless carry out the programme laid down.

On our late trip down we had the pleasure of seeing the Iron horse on Minnesota soil, snorting along before his tender, baggage car, and two passenger cars. It was a welcome sight, but the usefulness of the road is very much lessened by its St. Paul terminus being so far from the business centre of the city.—*St. Cloud Democrat.*

Connecticut and Passumpsic Rivers R. R.

The directors of this road have begun in good earnest on the incomplete portion of their road extending from Barton to the Province Line. They have announced their intention to have it open by the next 4th of July. Quite a number of hands are employed upon it, and more are to be put on. It is their intention, also, to place an iron steamer on Lake Memphremagog, to run between Newport, Vt., and Magog village.

Peoria and Oquawka Railroad.

The west end of this road was recently sold by the United States Court for $2,320,000. The sale was made under a decree of foreclosure of the second mortgage bonds entered by Judge Drummond. The property was bought by Mr. James F. Joy, acting for Messrs. Sidney Bartlett, Nathaniel Thayer and John W. Weeks, trustees for the second mortgage bondholders.

Midland Railway Company.

The Midland Railroad Company, whose road runs from Boston *via* Blackstone toward New York, held a meeting last week and accepted the acts of the Legislature of Connecticut concerning the corporation. The friends of the road are still confident of its completion according to the original programme.—*Woonsocket Patriot.*

Bay de Noquet and Marquette Railroad.

The Lake Superior *News* says that the work of surveying a route for a railroad from Bay de Noquet to Marquette, has been commenced. This is to be an extention of the Chicago and Northwestern Railroad, running by way of Green Bay City, and along the shore of Green Bay to Bay de Noquet, and thence to Marquette.

La Crosse and Milwaukee Railroad.

The western division of the La Crosse and Milwaukee Railroad was sold on the 24 ult., for $1,800,000, by order of Judge Miller, of the United States District Court, in foreclosure of a land grant on first mortgage. Isaac Seymour, F. P. James, D. H. Hughes, and N. A. Cowdrey are purchasers in trust.

Toledo, Logansport and Burlington Railway.

This road has passed into new hands by a foreclosure under the second mortgage, and a purchase for the bondholders by John S. Kearney Esq., of Chicago. The sale has been confirmed, a new organization effected, Mr. Kennedy appointed President and J. V. H. Lott Secretary and Treasurer. It has been supposed that this road was under the control of the Logansport, Peoria and Burlington Railroad Company which operates between the west line of Indiana and Peoria. The mistake has arisen from the fact that the two companies connect at the State line, and for economy they have both been under one Superintendent, but they are really distinct companies. Large calculations are made with regard to the new organization, and the traffic in lime, lumber and stone which the road is to enjoy. We shall be glad to have further information in regard to it, that we may speak with greater certainty of its future.

Chicago and her Railroads.

The trade of the city was seldom, if ever, better than at present. The railroads centering here with one or two exceptions, are driven to their utmost capacity, and the Chicago and St. Louis and Illinois Central are utterly unable to supply the demand for cars from shippers along the line of the roads. A gentleman who has just returned from a trip along the line of the Central assures us that five thousand freight cars are needed by that company to enable it to do the business which is offered, and, so long as the lower Mississippi remains closed to northern trade, the trade of Southern and Central Illinois, which formerly found a Southern outlet, must necessarily find its way to Chicago over the Chicago, Alton and St. Louis and Illinois Central, and the large increase which this trade must give to these lines will enable them to earn large profits during the next twelve months. The rapidity with which the country along the Illinois Central is being developed must also add largely to the business and revenue of this line, and as great as its business has been during the past few months, it is not claiming too much when we say that, should Illinois have as good crops for the next two years as it has during the past, their earnings will nearly if not quite double. The same causes which are giving the Illinois Central and Chicago and St. Louis such a large increase in their business and earnings are also adding largely to there Eastern-bound lines entering here, notwithstanding the fact that the propeller lines between Chicago and Eastern lake ports have been doing more than double what they ever did before in the way of carrying freight. The Eastern bound railroads centering here have had every pound of freight they could possibly carry, and the present indications are that they will be compelled to increase their rolling stock to double what it is at

present, in order to enable them to carry the freight which will be offered them.—*Chicago Post.*

To Civil Engineers.

The "Holland Society of Science" holds it meetings at Harlem and annually proposes scientific questions for solution by scientific men, who if successful in their attempts, are rewarded with valuable gold medals and purses of 150 florins.

Among a large number of unsolved problems we find the following, and hope some American Engineers will have leisure to undertake it and bear away the prize. We quote the words of the original text.

"Since the establishment of railroads, the construction of oblique arches has very much increased. Nevertheless the rules for fixing the dimensions of these arches, and of their straight or sloping parts have not yet reached the degree of perfection, arrived at in relation to straight arches. The Society, consequently calls for a mathematical theory of oblique arches, whence rules may be deducted for the form and dimensions of these arches for their slopes, and especially for the limit of the inclination allowable to such works."

Railroad Items.

The City Council of Bangor is about to foreclose the Mortgage held by the city on the Penobscot and Kennebec Railroad.

The Cape May Railroad is to be finished from Millsville to Cape Island by the 1st of January.

The Detroit and Milwaukie Railroad is to run four propellers between Milwaukee and Grand Haven, (across the lake a distance of about sixty miles) during the coming winter.

The Chicago and North Western Railroad, Company are surveying a route from Madison to La Crosse district.

The Beloit and Madison Railroad is to be completed as soon as practicable, at the expense of the Galena and Chicago Railroad Company.

The St. Paul and Pacific Company is extending its line beyond the falls of St. Anthony. One hundred tons of railway iron arrived at St. Paul's about ten days since. The work on the branch is proceeding rapidly.

Secretary Stanton has granted leave of absence to Col. J. D. Webster, to make a survey and report on the project of enlarging the Illinois and Michigan Canal.

Among those drafted at Scranton, Pa., are John Brisbin, Superintendent; R. A. Henry, general freight agent; W. H. Fuller, ticket agent, and H. P. Phelps, paymaster—all of the Delaware, Lackawanna and Western Railroad.

The steamship Pacific, formerly of the Galway line, now runs between this City and Nassau, *via* Havana, affording passengers unparalleled facilities, both as regards speed and comfort. Agent of the line J. R. Bacon, No. 53 South street.

Some important changes are reported in the Division Superintendents of the Erie Railway, to take place on the first of November. F. B Sweetzer, at present Superintendent of the Eastern Division, has been appointed Superintendent of the Atlantic and Great Western Railway, and is to be succeeded by Mr. C. L. Robinson of Dunkirk, at present Superintendent of the Western Division. Mr. H. C. Brooks succeeds Mr. Robinson as Superintendent of the Western Division, and also retains his position as Master Mechanic of the Dunkirk and the Buffalo Division.

The National Finances.

In anticipation of the annual report of the Treasury soon to be made, we are enabled to lay before our readers, approximately, the condition of the national finances up to near the close of the present month. We may not give the exact figures in every case, but our statement will be found to be very nearly accurate.

The public debt of the United States may be divided into three classes—that contracted prior to the loan of $250,000,000 granted in July, 1861; the loan of that date, and those authorized by Congress at its last session.

The amount of debts of the first class will, probably, reach about $118,000,000. Of the second class, the $250,000,000 loan, $150,000,000 is made up of the 7 3-10ths of which about $132,000,000 have been issued; $50,000,000 6 per cents. due in 1881, and $50,000,000 of the demand notes which were made receivable for dues at the Custom House. About one-half of these are already cancelled, and are being retired at the rate of $200,000 daily. Their places, however, are supplied by what are termed the "*new issue*" of demand notes.

Since the passage of the act of July, 1861, the Government has relied chiefly upon its demand notes; upon the deposits made with several of the Sub-Treasurers, and by the issue of certificates of indebtedness. Of the latter about $66,000,000 have been issued. Of the "new issue" of Treasury notes about $180,000,000 are already in circulation. The Department is now paying them out at the rate of $600,000 daily. Of the class of bonds known as the 5-20s, $18,571,100 have been issued. The exact amount of deposits with the Sub-Treasurers on call, is about $65,000,000. The aggregate indebtedness of the Department, consequently, will foot up as follows:—

Debt contracted prior to July, 1861	$118,000,000
Bonds bearing 7 3-10 per cent. interest	132,000,000
Do. 6 per ct. do. payable in 1881.	50,000,000
Certificates of indebtedness	66,000,000
Deposits with the Sub-Treasury and payable on call	65,000,000
Treasury notes new issue	180,000,000
Custom House notes	24,000,000
The Five-twenty year bonds	18,571,100
Total indebtedness	$653,571,100

This statement, we believe, is approximately correct taking the figures as they stood on the 22d instant, and making the liabilities of Government considerably less than the current estimates. It should relieve all apprehension as to any embarrassment to be caused by our public debt. The interest on the total amount at six per cent. is only $39,214,266. But only $449,571,100 draw interest, reducing the charge upon the Treasury from this quarter to $26,974,266. To meet this charge we have the revenue from customs which will probably equal $60,000,000 the present year, and the revenues from the extraordinary sources recently provided.

These sources were designed to realize fully $200,000,000 annually. We learn that so far they promise to prove productive far beyond the estimate. There can be no doubt of their realizing an immense sum, and forming a secure basis not only for the payment of interest accruing on the public debt, but for its rapid extinguishment, upon the close of the war. The abundance of money demonstrates the ability of Government to borrow to any required amount. As previously argued by us, the nation finds no difficulty in sustaining the burdens of the war, as it possesses in abundance what is necessary for its prosecution—men, food and materials and munitions of all kinds. So long as the people will dispose of these for the obligations of Government, no financial embarrassment need be feared.

In the present financial condition of the nation, consequently, all is well. The people have not lost a jot of their confidence, notwithstanding the failures in the military operations of the Government. They feel that want of success has been due to incompetency in those who have directed affairs, not to any weakness of the cause, or in the means of its maintenance and support. Confidence is unabated that the right men in the right place will at last appear. More than a year ago it was felt on all hands, that military successes were essential to the negotiation of loans. They have not come in the degree predicted or expected; yet it would be far easier for the Government to borrow to-day, than it was a year ago. We refer to this, to show that it is always unsafe to underestimate the financial strength of a people. On the contrary, the war will demonstrate a strength on the part of the nation far transcending whatever was claimed for it by its most ardent advocates. The natural resources of this country are so vast, that no limit can be placed upon its productiveness under the stimulus of a great necessity, or demand, especially so long as the war is not waged upon northern soil. With our financial strength unabated, all other things will come in due time. The experience, under similar circumstances, of all nations addicted to peace, has been similar to our own. But the work of preparation is going on, while military talent is being developed, so that we are really making vastly greater progress than is generally supposed. In the meantime we are consolidating our political unity, gaining in confidence and in experience, which cannot fail, in the end, to conduct to complete success.—*Hallett's Financial Circular.*

Railroad Earnings—Weekly.

The traffic of the Great Western Railway of Canada for the week ending Oct. 17th, 1862, was as follows:

Passengers	$25,890 99
Freight and live stock	31,973 50
Mails and sundries	1,902 08
	$59,766 57
Corresponding week of last year	60,113 78
Decrease	$347 21

The receipts of the Grand Trunk Railway of Canada for the week ending October 11, 1862, were:

Passengers	$22,446 92
Mails and sundries	3,016 50
Freight and live stock	58,975 61
Total	$84,439 03
Corresponding week of last year	83,974 56
Increase	$464 47

Finances of Vermont.

From the message of Gov. Holbrook, of Vermont, to the Legislature of that State, it appears that the receipts for the fiscal year ending Sept. 1, 1862, were $1,442,509, and the disbursements $1,218,250, leaving a balance in the treasury of $224,250. The liabilities of the State on Sept. 1, were $1,164,977, and the resources $552,888, of which $234,988 is a balance due from the United States. The indebtedness of the State in excess of its resources is funded in State bonds, payable in ten years from June 1, 1860. The expenses of the current year are estimated at $1,334,839.

American Railroad Journal.

Saturday, November 1, 1862.

☞ We have the pleasure of announcing to the readers of the Railroad Journal that we are hereafter to be favored with editorial contributions from the pen of S. DeWitt Bloodgood, Esq., a gentleman extensively known in this country and abroad for his literary and scientific attainments, and for having during his whole life been an active friend and supporter of all useful public improvements.

Stock and Money Market.

The last week has been a quiet one. The striking of gold from the Stock List has diminished the excitement in regard to its rates. There may be still a ground swell, but the surf no longer rages in the regular board, as an outside association has been formed to look after the precious metals in the street, and we presume it intends to make itself an institution and be felt in the commercial world. We shall see.

Money is in fair demand, ranging from 4 to 6 per cent according to circumstances, the character of the borrowers and the nature of their securities. Gold has been down to 130¾, but the transactions have been somewhat limited. Demand notes are quoted at 126¾@7⅛. Exchange is held at 145, and the supply of produce bills is large.

Freights are dull and heavy, and now is the time to make contracts, for the exportation of breadstuffs is sure to continue, and at present rates of exchange they leave a handsome margin as per latest quotations. The acting assistant Secretary of the Treasury has written a letter in relation to the U. S. 6s becoming due this next

December, in which he says the principal will be paid in currency, but the interest in gold. On Thursday the loan was quoted at 107.

The following quotations are in addition to those given in the adjoining columns:

New York.—Norwich and Worcester 66 to 77; Stonington 100; Nicaragua Transit Co., 3⅛ to 9; Ohio 6s, 1870, 108¼; do., 1881, 110; N. Y. City 6s, 1887, 109¼; Illinois coupons, 1877, and 1879, 105; Illinois Central R. R. full stock, 80; Illinois Canal bonds, 1860, 99; Rome and Watertown, 82; Detroit, Monroe and Toledo 1st mort., 98¼; Cumberland Coal pref., 14½; Canton Co., 18.—The quotations on Wednesday were: N. Y. Central 7s of 1876, 113; do., convertible, 114; Erie 1st mort., 117; Hudson River 1st mort., 114; do., 2d mort., 112½; Harlem 1st mort., 112½; do., 2d mort., 100; Nor. Ind., Goshen Line, 104; Terre Haute and Alton 2d mort., 58½; Chicago and N. W. Interest bonds, 93; do., Appleton Extension, 90; do., Green Bay Extension, 87; Toledo and Wabash 1st mort., 97; do., Interest bonds, 87; Mil. and P. du Chien 1st mort., 102½; Galena and Chicago 1st mort., 108; do., extended 110; Clev. and Pitts., 1st mort., 101; do., 3d mort., 95.

Boston.—Cheshire, 18; Concord, 59¾; Worcester and Nashua, 64¼; South Side R. R. 6s, 1881, 95; Ogdensburg 2d mort., 6¼ and 7; Rutland 1st mort., 45; do., 2d mort., 2¾; Vermont Central 1st mort., 23½; New Hampshire State 6s, 100; Massachusetts 6s, 1868, 116; Brooklyn City registered 7s, 1865, 105; do., coupon 6s, 1882, 107¼; Roxbury City 5s, 1880, 104¼; Massachusetts 6s, 1868, 116; Pontiac Mining Co., 4; Toltec, 3; Bohemian, 3¾; North Cliff, 1; Huron, 10; Mesnard, 8½; Pontiac, 4¼; Toltec, 3½.

Philadelphia.—Camden and Amboy 6s, 1870, 103½; Chesapeake and Delaware 6s, 1890, 90 and 92½; West Branch Canal, 62; Huntington and Broad Top R. R. Scrip, 60; do., 1st mort., 85; Schuylkill Nav., 5½; do., pref., 15⅝, do., 6s, 1882, 70; Morris Canal, 56; do., pref., 125; Susquehanna Canal, 5; Fifth and Sixths streets, 50; do., 7s, 108; Seventeenth and Nineteenth streets, 10½ and 11.

Baltimore.—Western Maryland bonds, 60; do., endorsed, 67; Baltimore City 6s, 1886, 104 and 105; Maryland Copper Co., .90; Canton Co., 18½. The quotations are: Maryland coupon 6s, 1870. 109; do., inscribed, 1878, 109½; do., 1890, 112; Baltimore 5s, 1860, 105; do., 1886, 105; do., 1888-'90, 84; Baltimore and Ohio 6s, 1867, 101 and 102; North Western Virginia 1st mort., 1873, 99½ and 102; 2d, do., 96 and 96½; 3d, do., 1885, 91; Central Ohio 7s, 2d mort., 1865, 68 and 72; do., inc., 1857-'60, 16 and 23.

Concord and Portsmouth Railroad.

This road, it is known, has been leased, during the past year, to the Concord Railroad for a term of ninety-nine years, and consequently the duties of the Directors are not very arduous.

The receipts of the road during the past year have been $18,182 73; the total expenditures, including two dividends, $16,785 54; leaving a balance of $1,397 19.

The following gentlemen are elected Directors of the road for the ensuing year: Stephen Kenrick of Franklin; Samuel P. Dow of Newmarket; Benjamin F. Martin of Manchester; Joseph B. Walker of Concord; Samuel N. Bell of Manchester.

Interest and Dividends.

The coupon due Nov. 1, on the Mortgage bonds of the Cleveland and Pittsburg Railroad Company, will be paid at the office of Wm. C. Gilman & Son, 46 Pine street.

The Norwich and New York Steamboat Company have declared a dividend of 10 per cent. The Norwich and Worcester Railroad Company owns $200,000 of this stock.

The coupons on the Indianapolis and Madison Railroad Company's bonds, due Nov. 1. will be paid on presentation at the office of Fer-J. & S. guson, No. 35 Pine street.

The interest coupons of the second mortgage bonds of the Buffalo, New York and Erie Railroad Company, due Nov. 1, 1862, will be paid at the Bank of Commerce, New York, on that day and thereafter.

The New York and New Haven Railroad Company has declared a dividend of $3 per share, free of the Government tax, which the Compay assumes, payable Nov. 1

The interest payable on the 1st November on the Bonds issued by Towns in the County of Schoharie will be paid on or after that date, on presentation of the Coupons at the American Exchange Bank.

The Pennsylvania Railroad Company has declared a dividend of 4 per cent. free of federal tax.

The interest due Nov. 1, on the second mortgage bonds and the Interest bonds of the Toledo and Wabash Railroad Company, will be paid at the Bank of the Republic.

The interest on the Bonds and Stocks of the Corporation of the City of New York, due November 1st will be paid by Daniel Devlin, Esq., Chamberlain of the city, at his office in the Broadway Bank.

The past due coupons on the 1st Mortgage bonds of the Central Ohio Railroad Company, due May 1, 1859, and Aug. 1, 1859—will be paid on presentation to the Receiver at Zanesville, either in funds current there, or in New York funds.

The Concord Railroad Co. has declared a semi-annual dividend of 3 per cent, payable Nov. 1.

Parties holding coupons due Nov. 1, 1862, from the funded coupon bonds of the Chicago and North Western Railway Co., are requested to present the same at the American Exchange Bank.

Holders of the assessment receipts of the preferred and common stock of the Erie Railway Company, are notified that payment will be made of said receipts and interest thereon, from their respective dates, on their presentation at the Office of the Treasurer, in Erie place, on and after the 1st of November. Interest on said receipts will cease at that date.

The New York Central Railroad Company gives notice to holders of the Debt Certificates of that Company, of the denomination of $100, that, pursuant to the notice published on the 18th of June last, the said Debt Certificates will as provided by their terms, be paid at par on the 1st day of November inst., when the next semi-annual payment of interest becomes due, at the Bank of Commerce in New York, after which date interest on said certificates will cease.

Coupons of the second Mortgage bonds of the Central Railroad of New Jersey maturing Nov. 1, will be paid at the office of the company, 69 Wall street.

The coupons of the Evansville and Crawfordsville Railroad Company, due Nov. 1, will be paid at the office of the Farmer's Loan and Trust Company, 56 Wall street.

Interest on the first Mortgage bonds and bonds of 1867, of the New York and Harlem Railroad Company, due November 1, will be paid at the Treasurer's office, corner of 4th Avenue and 26th st.

The coupons due Nov. 1, on the 7 per cent Mortgage bonds of the Long Island Railroad Co., will be paid at the Bank of the State of New York.

San Francisco.—The Russian Trade.

We predict that this city of the Pacific, will be one of the largest and most flourishing in the world. Not in our day perhaps, but eventually. And first because by the construction of the Railroad, it will become the distributing port of the Pacific Ocean, just as much as New York and Liverpool are for the Atlantic, and without any such competition as these two cities have all around them. Next, because its mines will attract trade, as long as gold is a precious metal, and exists in inexhaustible quantities within and near the bounddaries of California. But above all, because there is a new and great Power, which has marched from the West to the East to strike hands with the United States, and open a vast and novel trade with us. It is gigantic Russia, which tired of having its outlets on the Baltic shut up by ice for a large part of the year, and on the Black Sea by the "ceremonious" Dardanelles, with semi-barbarians only to trade with, has stretched towards the Pacific, planted her outposts on our own Continent, has two naval and commercial stations already prepared at Silka and Petro Paulowitch, possessed herself of two splendid Japanese islands in the Straits of Corea, has by treaty obtained possession of the great Amour river which divides her territory from that of China, and now looks over to the busy enterprising Americans not many miles off and says in effect, Let us trade together and be friends forevermore! We do not now propose to enter into details on this subject, they will appear elsewhere in proper official form, but we do say that the trade of China and Japan, for which in part we are to make this Pacific Railroad, will be found a small business, compared with that which is to come from thirty millions of Russians, down a river as great as the Mississippi, along a coast as extensive as the whole of that of Northern Europe, and with no civilized and Christian nation of merchants and manufacturers near at hand to trade with but our own.

For such articles as the Russian people now get in part from Europe, and millions of them never get any, they must come to California and can go no where else. The long costly voyages from Europe will be done away with. New York already the only port in the world where an assorted cargo can be made up at any moment, will take care to supply San Francisco with everything these Russians will require, and in the quickest time. So then with the trade of Japan, China, Russia and the islands of the Pacific, San Francisco is certain to become a very great commercial port, the Tyre of modern times. It now has a population of 91,826, and the only cities in the

United States which can outnumber San Francisco are New York, 813,668; Philadelphia, 565,531; Brooklyn, 266,664; Baltimore, 212,419; Boston, 177,481; New Orleans, 168,472; Cincinnati, 161,044; St. Louis, 151,780; Chicago, 109,263. The City of Pittsburgh, with its suburbs, numbers 115,000, but the place proper only 49,465. Thus it appears that San Francisco, a town virtually but thirteen years old, already ranks as *tenth* amongst the cities of the United States.

Its taxable property as ascertained from the assessor's books is as follows:

Real Estate	$35,500,000
Personal Property	11,500,000
Mining Stocks	2,500,000
Mortgages	8,800,000
Vessels	1,600,000
Total	$59,900,000

So that a distribution *per capita* of the taxable property of San Francisco, gives to each man, woman and child about one thousand dollars, a larger sum we imagine than any other city or any state in the Union can show.

Under any circumstances, her increase in wealth and population will proceed at an enormous rate, but when the Pacific Railroad is made, when the United States Post Office Department places some of our swiftest wooden sloops of war on the routes to Japan, China, and the new Russian ports in that neighborhood, San Francisco will have a direct trade of her own with one quarter of the whole globe and must become one of the greatest cities in the World.

Illinois Central Railroad.

We are indebted to SAMUEL J. HAYES, Esq., Superintendent of Machinery, for a copy of his statement of the Performance of Locomotives on the Illinois Central railroad for August, 1862.

This is an interesting sheet, and furnishes valuable information on a subject which is too often overlooked by Railway Managers. There may be a large traffic, great regularity, and entire accommodation, and yet much disappointment in pecuniary results. We have believed, that the disappointment might often be attributed to the want of scientific skill in the management of the locomotive power, to a want of systematic economy in details and a knowledge of practical results, which cannot be avoided except by accuracy of observation and a careful system of generalisation founded on that basis. The Illinois Central Railroad Company knows the character of every Engine it uses, the average number of miles it traverses, the quantity of oil it consumes, the fuel it burns, of repairs required in the performance of its usual mileage, the amount of waste, the wages of those who drive the Engine, and of those who feed it; and all these items it can apportion to the tonnage of the Machine, the train it draws and the freight it transports, with almost mathematical certainty. Of course its expenditures may be easily calculated foreseen, provided for, regulated and increased or diminished according to circumstances. The President or Superintendent may be said to have the whole work and business in his head and hand. We should judge from the report before us that Mr. S. J. Hayes by whom it appears to have been prepared, is a thoroughly scientific and practical man, and the facts he has so ingeniously and minutely stated are valuable data for the use of Engineers, and all indeed interested in ascertaining the expense of working great lines of Railway in the Locomotive department.

Car Windows.

Until the present time a good car window was a desideratum. The common one, sliding up and down, permits the passenger to protrude his head or arms, to the possible destruction of either through his own carelessness. A new style, which has come into use on some of our roads, has an opening of only a small pane of glass, say five by ten inches. This affords sufficient protection to the head, but is objected to on the ground that the passenger can neither glance forward nor backward, without going to the platform and making the risk still greater than before.

A new car which has been built for the Erie Company obviates both of these defects. The window, consisting of five small panes, is made to *project in the centre* about three inches, the middle pane opening and closing like a door. By this means the passenger is enabled to look forward and backward with perfect safety, while the supply of air is amply sufficient for all purposes. The whole arrangement is extremely neat and simple.

The car otherwise is a model one. The arrangement for ventilation, though not as costly as some, would seem to be effectual. A casing or second roof extends nearly the entire length of the car, being about twenty four inches wide by twelve inches in height. (We speak from recollection merely.) On the sides of this are the openings which can be closed by outside blinds, inside doors, or both. Lamps can be suspended from the upper roof without coming in contact with the hats of passengers, or compelling a portion of them to leave their seats as is ordinarily the case. A stove is placed at each end of the car. The seats are of the common pattern, with a ridge running along the top of the back, against which the head may recline. The upholstering, painting and gilding are very tastefully executed.

One other reform remains; but this must come from the people rather than the managers of railroads. It is to *use* the means of ventilation thus provided, and to dispense with a large portion of the heat generated in the stoves during the winter months. More efficient methods for bringing on lung complaints could not be invented; but the traveling public, we regret to learn, are inexorable, and railway employees are driven to the cruel necessity of roasting alive their best friends, the people of the United States of America, "by the grace of God free and independent." Perhaps they will be induced to alter their tastes on this matter some time or other.

Chicago and Northwestern Railway.

This road we are informed is completed to Green Bay, and now has two important lake ports at its respective termini.

The validity of Instruments without Stamps.

The Commissioner of Internal Revenue has decided that under the present circumstances the stamp is not absolutely necessary until the 1st of January, 1863. All instruments, therefore, made previous to that date will be valid without stamp. No prosecutions will be allowed till stamps are issued, as no one but collectors can inform against parties who neglect to use stamps.

Chicago and Alton Railroad.

This is the title of a new corporation recently organized in Chicago by the election of James Robb, Esq., President, and Joseph Price Esq., Secretary and Treasurer of the Board of Directors named as Commissioners and Directors in the act of corporation.

The bonded debt and stock of the company will amount to $7,750,000 as follows:

First mortgage 7 per cent bonds	$2,100,000
First mortgage 7 per cent preferred sinking fund bonds	600,000
Income bonds (7 per cent)	1,050,000
Preferred stock (7 per cent)	2,300,000
Common stock	1,700,000
Total	$7,750,000

These are few if any of the railways of the West that have encountered so many adverse changes of fortune as the Chicago and Mississippi, and St. Louis, Alton and Chicago Railroad Companies, of which the Chicago and Alton, the new corporation, is the successor. The condition of the road and its rolling stock, when surrendered to Mr. Robb, who was appointed its Receiver by the United States Court, in November, 1859, was of the worst possible character, and but for the timely intervention of his aid and services in the administration of its affairs, it is but reasonable to suppose the railroad would have been abandoned, and the interests of the bondholders entirely sacrificed. This misfortune has been prevented by the management and fidelity of Mr. Robb in the execution of his trust, and not only the bondholders, but the inhabitants of a large and most important section of the State of Illinois, have now, not only to congratulate themselves in the redemption of so valuable a property, but also in being guaranteed in the possession of it, on a basis of future security and usefulness.

There is no railway line leading out of Chicago that possesses more of the elements of prosperity and of an extensive and legitimate traffic, than the Chicago and Alton. It is in the direct line of travel between Chicago and St. Louis, and twenty-four miles shorter than by any other route, and in proof of its resources to maintain itself, we are furnished with data made up from the traffic of 1861, showing its receipts from local traffic to amount to over eighty-two per cent. of the total of the year.

The improvements made upon the road, its rolling stock, bridges and stations, under the management of Mr. Robb, as Receiver, have been extensive and permanent, about eighty miles of track being ballasted with gravel, forty miles relaid with new and rerolled iron, two-thirds of the line of two hundred and twenty miles replaced with new cross ties, the principal bridges being rebuilt with stone-masonry in the most substantial manner and the additions to, and improvements of the rolling stock, are twenty-three first class locomotives, and about four hundred new and rebuilt box freight, platform, coal and cattle cars, and sixteen passenger cars.

We learn that no change will be made in the corps of officers and employees, employed by Mr. Robb, as Receiver, which is composed of capable, efficient and reliable men, and we doubt not that a company, inaugurated under the encouraging auspices that now surround the Chicago and Alton, will hereafter rank among those highest in prosperity, character and credit in the Western States.

A Capacious Water Tank.

The *Port Jervis Union* says that there is now being erected on the line of the Erie Railway, in that village, the largest water tank between New York and Dunkirk. It is constructed of brick, sixty-five and a half feet long, twenty-three feet wide, and thirty-three feet high. It contain-

three tubs, each sixteen feet high and twenty feet in diameter, with a capacity of 18,800 gallons to each tub.

French Architecture.

DOMESTIC ARCHITECTURE IN THE NINETEENTH CENTURY.—PARISIAN HOUSES.—HOTELS AND CASTLES IN MINIATURE.

FROM THE FRENCH OF DE LASTEYRIE.

Translated for the Railroad Journal.

If there has ever been a century which might claim a style of its own in architecture, it is certainly the century in which we live, for never has there been so much building. And as France is the country in Europe and Paris the city in France where they build the most, it would seem that the prototype of actual architecture must be the *Parisian* style.

Observe I only speak of domestic architecture, of private edifices. As for great public buildings, alas! we are yet only imitators, and it is the best we can expect, if most of our artists can copy tolerably well, a Greek temple, a Gothic church or a palace in the style of Louis, XIV. David (d'Angers), our great sculptor said to me one day half in pleasantry; "As to public monuments suited to their use, of an original style, and quite of our own time, I know of none except the slaughter houses!"

Since then, however, some artists of great merit have succeeded in giving to their works, that individuality, those appropriate qualities, in which the edifices at the beginning of our own century were so entirely wanting.

But it is above all in the construction of private buildings that original ideas seem to have struggled to the light. The fancy of the artist, the caprice of the proprietor, reign so absolutely, that we might even fear certain anarchy in point of taste. However, if it is a fact, as I am convinced it is, that all style is the expression, or rather the result of the necessities, manners, and tendencies of an age, we must, in spite of unimportant eccentricities, soon recognise, in an immense majority of the houses simultaneously constructed, a certain number of identical characters, of common traits, of points of resemblance, which constitute a distinct and peculiar style. Evidently, the innumerable mansions which spring up along our new high roads, neither resemble those of the ancients, those of the middle ages, nor those of the time of Louis 13th nor of Louis 14th, nor even those which were built hardly fifty years ago.

The times are much changed, and with them have changed necessarily the forms of modern houses.

And first, the requirements of the highway, no longer allow of those picturesque porches, those turrets, those pagoda-like pavillions, of which the middle ages and the successive eras were so prodigal. The ground, formerly abundant and low-priced, is now become rare and enormously dear. The first problem to be solved now-a-days, is, to make it bring as much as possible, by crowding it with as many inhabitants as it can hold. Formerly, great lords built themselves splendid hotels, and the poor vassals crowded themselves, as they could be, into miserable houses in the quarters abandoned to them by the fortunate of the hour. As to the middle class, it was of small consequence and they lived very modestly.

To-day, all is eloquent. The middle class has taken an important place in the world, to which it is justly entitled from its intelligence. But it has its weaknesses; after having been so long kept back in shadow, it is possessed by an exaggerated love for everything brilliant. Each one wants to appear as being more than he is, and having more than he has.

Formerly, the merchant, or the lawyer, lived in some quiet street, in a house of modest appearance. A little porch, or a heavy vaulted door, led you to a stair-case often only half lighted. You pulled the *deer's foot* or the copper ring suspended to the bell rope, and a stout servant maid (if not the mistress herself,) ushered you first into a vast room, usually the saloon and dining-room: some arm-chairs, a sofa of Utrecht velvet, a very clean walnut table, a looking glass two feet high over the chimney piece, and simple cotton curtains in the windows, usually constituted the whole luxury of the family sanctum. Then came a good sized room where was the large double bed in all its grandeur; then two or three other smaller rooms, according to the number of boys and girls, then a large kitchen, with its innumerable legions of pots and pans; and here and there, through these rooms, smaller ones furnished with closets well stored with linen.

There was much comfort in this citizens' home; calm, patriarchal, yet industrious lives were led there, which yet did not exclude much social enjoyment, and thus were accumulated the children's dowers.

Seek such a house to-day! An old philosopher would hardly consent to live thus.

In the first place, they want a handsome house, one which looks well outside. They want a handsome entrance, with a porter whom they call a *concierge*. They want a stairs painted in stucco with gilt hand-rails, a crystal ball at the end of the bell-rope, in short, *all the finishing of the door*.

Luxury everyday is too burdensome for their fortune, Madame is only *at home* once a week. But on that day, how well everything looks! The door is opened to you by a dashing man-servant, or at least by a a smart soubrette who pompously shows you into an elegant saloon, gilded from the ceiling to the smallest piece of furniture. The furniture-covers have disappeared for twenty-four hours, leaving uncovered sofas and arm-chairs of brocatelle. The plate-glass mirrors reflect the plate-glass windows, which have long superseded the panes. A rich carpet covers the floor; and to complete all, an antique clock, some candelabres, some bronze gilt in the most showy styles represent art, about as well as many other things are represented in this world.

But let us finish our domiciliary visit.

The dining-room is faultless, the furniture carved oak, sculptures on all the cornices, altogether a charming little jewel box, only while looking at all this pocket luxury, we ask ourselves if anything but doll-dinners would be in keeping there.

Let us go behind the scenes.—Let us enter Madam's room. Even there, the furniture is very fine, but the size! Where are the closets, the wardrobes?—We will look in upon the gentleman. "Monsieur's apartments are in the back part of the house," as his porter elegantly expresses it, which means that Monsieur's only window looks upon the yard. But why do I say yard? It is an air-hole, a deep pit, where the pale oblique rays of light hardly find their way to the lower story. Monsieur has a very fine office, but in his own rooms he cannot see, or turn round. He sleeps on a sofa-bed, and dresses himself in a dark closet.

As to the kitchen, it is only a wretched dark corner, hardly good for anything. Daylight only reaches it at second hand, there is not room to hang up three pans. But what matters it? When there is company to dinner the cooking is not done at home. Of what use are dressers? Of what use are cellars, pantries, closets? Paris is a city of resources, from the servant to the table-linen, from the food to the dishes that hold it, from the lamps to the flowers, every luxury can be hired by the half day.

When life is thus regulated, when such habits are formed, the task of the architect is already pointed out. This programme is planned nearly as follows:

To have the utmost regard for outward appearances, to sacrifice comfort to luxury, to sacrifice that which does not show to that which does, the interior arrangements to the front, the private rooms to the reception rooms; to make the most that can possibly be made of the space in height and surface; if this space includes a court-yard to make it just large enough for a carriage to turn round in, and above all, to decorate the fagade extensively, and cover it with carving and gilt balconies.

As to terraces and pavillions, such things would not, of course, be thought of. The smallest bit of terrace worthy the name would occupy the surface space of two rooms, which multiplied by four stories looking on the street would have a value in rent, of fifteen to sixteen hundred francs, equal to a capital of thirty thousand francs at least. Terraces are no longer found except on the roofs, the highway laws requiring that the fifth story of a house in a row should secede from the others.

To sum up, here is a type of a city house of the nineteenth century.

A large front looking on the street: shops on each side of the door: entresol: first story with a balcony, large plate glass windows, and gilt shutters, *to be seen from without;* second and third stories symmetrical, cornice surmounted by a narrow ledge on which opens a last story, surmounted in its turn by the roof, where are the garrets, used as servants' rooms without light, without air, and of an incredible smallness. (for it is one of the numerous delights of modern houses that the servants are never within reach of their masters.) Such being the actual state of things, architects must perforce remain faithful to the style created by the tendencies of modern society, monotonous and graceless though it be. Indeed unless they made the windows lozenge shaped, I do not really see what originality they could possibly give their houses.

We have not considered the small hotels.

The real taste of the day, is to be found there.

We must however understand perfectly the value and significance of this word.

Formerly, a *hotel* meant a vast private dwelling, occupied by one single family only, built between yard and garden, having on the street only a porter's lodge or some low servant's buildings, with a court-yard in front, flanked on each side with two or three other smaller courts for the

stables, offices, and kitchens; the principal building composed, on the ground floor, of a sumptuous array of reception-rooms, and on the first story, of the apartments of the family.

Those were real houses of the nobility. In Italy, they would have been called *palaces*. Paris and particularly the Faubourg St. Germain, still contain a number of them, though the greater part have been absorbed by the minister's offices, and great public administrations. Some of them were the work of the most eminent architects of the last century, and that which preceded it.

Hotels on such a plan are no longer constructed. We can hardly quote as exceptions, those of Mme. de Pontalbas, M. d'Aligre, and M. de Fould. As to the little modern hotel, it is only very small change compared to those. A hotel now-a-days, means a house which its proprietor inhabits alone. And the number of them increases every day; for rents have risen to such fabulous amounts, that many people among those who wish to live well, find it more economical to buy a corner of ground in some remote quarters, and to build themselves a house of their own. Even then they stint the ground not a little. It is so dear! They buy as little as possible, and the architect must strain every nerve to make the best use of it.

Some of these little hotels are master pieces of arrangement. Modern comfort seems to have made its habitation there. I will add that there are some very pretty ones.

Their most habitual defect however, is a tendency much too plainly manifested, to great pretension, the castleated style applied without rhyme or reason, and a straining after great effects, where simple elegance should be the order of the day.

Do what we may, our little modern hotels bear no resemblance to the hotels of the last century. They resemble more, pretty country-houses transplanted. On the other side the country houses of the day, particularly in the environs of Paris, are much like city houses.

It is quite natural that in our time, with the division of fortunes, and the system of economy which renders property so liable to change hands, hardly any more great castles should be built than great hotels.

A taste for the country, however, is more universal than ever. People like to pass at least a few months of the year there, if only for economy's sake. But it is another of the pretensions of our time, to be no longer contented with the parsonage like house, and the great square pavillion so ingeniously ugly, that our fore-fathers inhabited as a matter of course.

In that, we must allow, we have better taste than our predecessors.

Nowhere is picturesque architecture more in place, than in the country.

On this head, however, we must be careful not to exaggerate. Undoubtedly we can find models of good taste for imitation, even in the most limited constructions; but that is no reason why under pretext of style, the smallest house should affect the accompaniment of a feudal mansion, and a modest dwelling with only a garden of two acres, should pretend to reproduce the magnificence of the princely chateaux of the last century.

In my opinion, the English understand better than the French, the construction of country houses. They know how to use with much clearness, the varied resources of the antique; less pre-occupied than we are; with the regularity of the plan, they generally contrive to give them more of the picturesque, and also to satisfy better the requirements of comfort. Their greatest art lies in making nature herself lend her aid to the charm of their domestic structures, in making the vegetable kingdom contribute to their fresh and artless style of ornament. It is less pretentious, it is less lofty, perhaps, than our efforts, but it is economical, and the effect is pleasing to the eye.

In a word, the French understand the castle best, and the English the cottage. Ours are the dwellings of people whose lives are passed in cities; the English on the contrary pass the most part of their lives in the country. In our country too, the scene is more varied.

England, otherwise a charming country, has the misfortune to be the same from one end to the other (to which must be attributed doubtless the ennui which the English so frequently feel when at home).

France, on the contrary, is the most varied country in the world, both in nature and aspect.

Now as a country-house should always be in keeping with the country around it, it is evident that the same style would not be suitable to all the provinces of France.

It would be as absurd to construct a Swiss cottage in the plains of Beauce, as to build a grand chateau in the style of Louis 13th, in the valley of Chamounix.

The nature of the materials is another important consideration. Thus for instance, building in a stone country, is very different from building in a brick country; and also the tufa stone so easily cut on the banks of the Loire, permits fanciful decorations that would not be possible with the granite of Bretagne.

In short the site, the nature of the materials, and the destruction of the building, are three important considerations which should have great weight in the adoption of a style, and we cannot protest too strongly against the tendency manifested by architects to select at haphazard, models very well in their place, without disturbing themselves about their particular propriety.

Taste has certainly made some progress of late years; but the greater part of our artists are still in want of originality. If some strive for it in the most praiseworthy manner, others in pursuing after it, only reach its step-sister, oddity.

St. Louis, Alton and Terre Haute Railroad.

The new bonds of this company have nearly all been issued and are in the market. The preferred stock, which will soon be issued, will amount to about $1,500,000, which, together with all the issues of bonds, makes $8,000,000 on a line of two-hundred and thirty miles, not to speak of valuable coal and ferry property. This requires, at the most, $1,100,000 to $1,200,000 per annum to pay 7 per cent. to the preferred stockholders.

California Raising her own Sugar.

Late California papers state that sugar and syrup, made from the Chinese cane, and a better article than the imported, has been made in considerable quantities in the State. Tulare county will, no doubt, be able to supply her own population with sugar and molasses.

The Van Nest Gap Tunnel.

The completion of this stupendous work, which, had it not been for the overshadowing proportions of the rebellion, would have commanded a goodly share of public attention, has been permitted to be accomplished without any demonstration, or even a passing public notice. The tunnel is excavated for double track, is 3 002 feet long, and penetrates the Oxford Mountain at Van Nest Gap, near the flourishing and beautiful village of Oxford Furnace, N. J. It was built for the Warren railroad, being part of the line of the Delaware, Luckawanna and Western Railroad, and was commenced in 1854, by Rutter & Du Puy, contractors, and was finished some months since, by Messrs. McAllister & Wiestling, both of the latter having been interested in the work since the commencement. The rock is of a syenitic formation, and during the progress of the job almost every form of underground operations proved necessary. From the hard, seamless rock, offering the most stubborn resistance to construction, every degree of formation was encountered, to quicksand, with an unusual quantity of water. Almost one-half of the Tunnel is substantially timbered and arched with stone masonry; the balance being carefully and skillfully excavated through the solid rock, requires no artificial support.

The work was prosecuted with that degree of rapidity, dictated by the interests of the Company, and was attended with less of accidents and riots than usually mark undertakings of such magnitude. In the parapet, at the west end of the tunnel, is a handsome marble slab, on which is chiseled the dates of commencement and completion, and the names of the President of the Warren Railroad, Mr. John J. Blair, the Chief Engineer, Mr. James Archibald, and the contractors Messrs. McAllister & Weistling—to whose energy and ability this great work will prove a lasting and enduring monument. The Warren Railroad is leased and operated by the Delaware, Lackawanna and Western Railroad Company, and the good effect on the interests of each Company, caused by the completion of this work, by which about six miles of heavy grade and stiff curvature is avoided in the round trip, cannot but be marked.

No heavy grades or other impediments to long coal trains now present themselves from the summit near Scranton to tide-water. The capacity of the road is ample; its past has been marked with success; and while the greatest credit is due to the originators of the enterprise, the ability of the present administration cannot fail to bring all the anticipations of its most sanguine friends to a speedy realization.

The Population of San Francisco.

The most suprising statistical information contained in the invaluable directory of H. G. Langley, now on the eve of issuance from the press, relates to our population. Of the more than thirty-four thousand names, thirty-two thousand are white males over 21 years of age. This is an increase over the number of last year of four thousand, or nearly nineteen per cent. For the consolation of old bachelors and widowers, we will inform them that the number of females in this city over 18 years is seventeen thousand five hundred; and of damsels "mostly" under this ripe age, over twenty-five thousand. This exhibits an increase of twenty-three hundred of maidens and matrons over 18, or upwards of fifteen per cent. Of girls, under 18, the increase is nearly twenty per cent. The annual increase of children to our permanent population exceeds 5,000. According to the census returns of the compiler of the Directory, the total population of the City of San Francisco is set down at 91,825. These figures are founded on the most reliable data, and as the greatest industry and care has been taken to enumerate all the people living in our midst, we believe the returns are as accurate

as could be obtained in any other way. The number of white males over 21—names in the Directory—32,000. The number of females over 18, 17,500. The number of males under 21, and females under 18, 25,000. Males, foreigners, and names refused, 4,200. Chinese, male and female, 3 250. Colored, 1,875. Besides these, there is our great "floating" population, larger probably, than in any other city of this size in the Union. The number of transient boarders, soldiers, fresh-water sailors, and others doing business on our Bay waters, besides some who live, like "Bummer and Lazarus," on the town, must amount to at least 8,000, which, added to the above figures, gives the aggregate of our population at 91,825.—*Alta California.*

A Leviathan Railway Channel Boat.

Mitchell's Steam Shipping Journal says—"The project of a railway ferry boat from and to Dover and Calais will, we are told, be shortly before the public. The ferry boat is to be 300 feet in length, 100 feet beam, and draw but five feet of water. In the centre of the deck will be a covered iron tunnel into which the carriages will steam with goods and passengers, and be conveyed across the channel with considerable rapidity. The speed is to be 40 miles per hour. She will have rudders at both ends, and will never require to turn. Her build to be that of a series of unsinkable tubes."

Engineer's Tracing Linen.

THE attention of Engineers, Architects and others is called to the **Celebrated Crystalline Tracing Linen** (new kind) The above superior article is for sale, in rolls of 24 yards, and 36 inches wide, by

SIBELL & SALISBURY,
7 Nassau St.,
(NEAR WALL ST.)
6m44 **NEW YORK.**

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.
Address—**Car Improvement Co., Box 362, Post Office, New York.** 38tf

OTTO AHLSTROM,
MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.
Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.
For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.
Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.
For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.
For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.
For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.
Orders promptly executed by
OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y

Semi-Steel Locomotive Tires, Fire-box & Tube Sheets,
AND BOILER PLATES.
TIRES—ROLLED, BLOCKED AND WELDED TO FIT ANY GIVEN DIAMETER OF CENTRE.
PLATES—ROLLED AND CUT TO ANY PATTERN AND SIZE ORDERED.
ROLLED AND HAMMERED BARS, AXLES AND FORGINGS OF SAME METAL.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & Co. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.
Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.
MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.
A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.
During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.
Communications and remittances should be addressed to
MUNN & CO.,
Publishers, No. 37 Park Row, New York

FOR SALE.
1 30 Ton, Coal Burner, 18x22 Cylinder, 6-48 inch. Drivers, Price, $11,500.
1 20 Ton, Locomotive, 4-54 inch. Drivers, Price, $9,000.
1 10 Ton, do. Price, $6,000.
All 4 ft. 8½ inch. gauge. Superior Machines, now ready for delivery from shop. Apply to

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.
Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.
They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.
The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT RE-OILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS
For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is unerring; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.
They also manufacture and are the exclusive licensees of Otis Tuft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving Belts, which insures it to stop at the required point. It operates without noise or jarring.
Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.
ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.
Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.
Having made this branch of Engineering a SPECIALITY the past seven years with uniform success, they confidently offer their services to those requiring such aid.

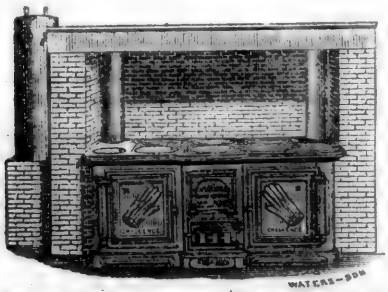
CUMBERLAND COAL.

THE BORDEN MINING COMPANY



ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL**, remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and Bakes with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light

SUMMER AND WINTER PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical in fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

IMPORTANT

TO

RAILROAD COMPANIES.

THE ATTENTION OF

RAILROAD MANAGERS

Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the

ALBANY AGRICULTURAL WORKS,

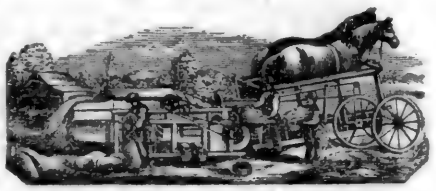
CONSISTING OF

EMERY'S PATENT

Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations, and of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, November 8, 1862.

☞ Letters, Communications, Pamphlets, etc., intended for this JOURNAL, should be addressed to the *Editor and Proprietor*, JOHN H. SCHULTZ.

NOTICE.—Inventors and scientific men wishing to introduce valuable improvements to the notice of the public, particularly such as relate to Railroads, Locomotives and Steam Navigation, will henceforward receive due attention from this JOURNAL, on the receipt of communications containing proper descriptions of those improvements; a gentleman competent to the task being connected with the proprietor for this purpose.

☞ Works on Railways and Railway Improvements, Steam and Steam Navigation, Science and Art generally, will hereafter be received at this office, and impartially reviewed.

☞ At the regular monthly meeting of the Chamber of Commerceon Thursday last, TOWNSEND HARRIS, Esq., our late and very able Minister to Japan, was received with the usual honors. In a brief speech in reply, he gave very important information with regard to the Commerce of China and Japan, which bears so immediately on the prospects of the Pacific Railroad, that we shall present them (after a personal interview for that purpose) to our readers in next week's JOURNAL.

The Pacific Railroad.

OPENING OF THE BOOKS OF SUBSCRIPTION.

It will be perceived by an advertisement in another column, that the books of subscription to the great Union Pacific Railroad have been opened for the present in this city at the office of the Secretary, No. 54 William St., and also at thirty-four other places in the United States. The books are to be kept open at least two weeks.

We think that a longer notice of the opening should have been given, and that the books should have been left at our principal City Banks, for reasons which are too obvious to require much explanation. These institutions could do much to obtain subscriptions, and there is plenty of time now to secure their co-operation. We have in this JOURNAL during years past called the attention of our readers fully to the subject, and a mere recapitulation of our views is all that is now required on the present occasion.

1. It is established that this railway can be constructed, there being no physical difficulties which are not readily to be overcome. For the greatest part of the distance there are literally speaking no obstacles at all.

2. Its length will be considerably less than originally supposed, as various new routes are suggested before unknown, by which the Sierra Nevada may be passed.

3. The expense of construction will be much less than was first supposed. At the Chicago convention there were contractors ready to take the whole job, for the amount of the Government loan to be made the company, and the lands ceded.

4. It is not a work beyond our means, nor experience, and that this is self-evident appears plainly enough from the following extract from the speech of Mr. Bloodgood at the Chicago Convention, which has been extensively republished. Speaking of the American Railway system, he said:

"The American Railway system was a Titanic labor, but it was successful. In the ten years ending in 1860 its progress was unexampled. In 1850, the number of miles of railway in operation was 8,588 79-100 miles, at a cost of $296,260,128, about the amount of the whole specie in the country. In 1860, the number of miles was 30,592 72-100, the cost $1,134,432,909, an increase in mileage of 22,000 8-100 miles, and of construction $838,192,781. And four-fifths of this increase of these lines and this expenditure were in the loyal States of this Union, that having been their proportion in pretty much everything but political power, in whatever has been accomplished for the prosperity and glory of this Republic. In this honorable career of railway enterprise, the State of Ohio has led the van, having about 3,400 miles of rails laid within her limits. Illinois comes next with 2,854, New York next with 2,600, Pennsylvania with 2,300, Michigan with 1,673, Indiana with 1,284, Wisconsin with 803, Tennessee 837, and Missouri with 657.

In comparison, then, with the actual amount of money expended on railways during the ten years mentioned, and the increase of mileage 22,000, the work of constructing a railway to the Pacific appears to be but a very simple and easy undertaking. If 22,000 miles of these new railways could be made in so short a time, and $900,000,000 readily found for their construction, can we not build one not the tenth part of the distance within ten years, and especially when the greatest part of the money is advanced by the Government? In this view of the subject our greatest difficulties absolutely disappear."

5. The immediate necessity is to obtain money enough to build the first forty miles of the road; when this is done, the Government assistance goes on *pari passu* till the whole work is completed.

6. Ten per cent is all that will be necessary for some time, and it is pretty certain with good management not more than fifty per cent will be wanted within the next six or eight years.

7. While as an investment merely, it might present very strong claims, it has been deemed advisable by the corporators and the friends of the road to place the whole subject before the people, as one principally addressed to their patriotism, and to appeal to that sentiment rather than the feeling of interest, for the following weighty reasons.

It will develope a vast and fertile region of country to populate it, add to the political and commercial power of the Union, and create a new brotherhood of powerful loyal States.

It will facilitate the working and products of the great mining territories of Colorado and Arizona in addition to the States of Oregon and California, and it is safe to say from the recent surveys of the two former, there is more gold there within the immediate reach of American industry, than there is *now in circulation in the whole world*. This railroad will bring it forth.

It will give us the trade of Japan and China on terms which will secure us the ascendancy over any of the countries of Europe now engaged in it. It will absolutely destroy the old routes by the Capes, or even the modern one of travel by the Isthmus of Suez. The whole business of exchange, and gold and silver shipments to the East will pass through American hands. This fact has been most ably demonstrated in the speeches of Senator McDougall and Mr. Phelps, M. C., for California, on the passage of the bill.

But another and most interesting fact has come out within a few months past, which throws many other considerations entirely into the shade. It is now beyond all question that the Russian Government has become interested in the construction of this railroad. It has extended a telegraph line to the Pacific Coast, or at least will have done so before the conclusion of the present year. It has commenced active operations on the great river Amoor, having extended its southern boundary by treaty with China to that river, while it actually controls all its principal sources which make within its own boundary. This great river will bring to its mouth the products of the industry of a country of which it is the Russian Mississippi, amounting to 9,200 square miles. The Russian trade hitherto has been with Europe by the Baltic, and with the North of China overland, but now with its territory on the Pacific, two islands in the Straits of Corea, and for the first time a civilized, commercial and Christian people face to face on that ocean, it is plainly to be seen that an immense trade with Asiatic Russia will spring up, that the millions of people there will want their agricultural implements, their clothing, their machinery, their luxuries, and indeed everything else they need from the nearest, cheapest and most commercial port, and that is San Francisco! It is impossible to calculate the consequences of this new opening, and our Government could afford to make this railway on its own account, if for nothing else than this commerce with Russia, and this closer connexion of the interests of two nations, hitherto one of sympathy, now to be one of interest. Here is a field of diplomatic correspondence worthy of the attention of our Secretary of State. Thus we see the stupendous results of this railway. The control of the trade of China, Japan, and Asiatic Russia. And another consequence, that the European traffic will be diverted from its old routes to the new one, and finally an increase of our population and material wealth, which will make the burden of our war debt a very light one after ten years, if we but push this work through.

We exhort the readers of the JOURNAL, therefore, every one indeed who can possibly spare the money, to subscribe for at least one share, which will be but one hundred dollars after the present law shall be amended for the purpose of bringing the subscriptions within the reach of every patriotic citizen.

In addition to this we may confidently state, that even if the Government be compelled to meet the interest of its loan for a few years, in advance of receipts from the road, or the sale of lands ceded to the company, it will be fully indemnified. For it has been paying nearly eight millions per annum for transportation round Cape Horn, and overland and across the isthmus to California and Oregon, and by using the road it will save all of three millions per annum. So on the other hand the amount of the reduced cost of transportation which it will have to pay to the road is estimated at about five millions, and this will not only meet the interest on the loan, but leave a surplus to the company to be available as dividend and part of the earnings.

The people of the great West understand this whole matter perfectly, and we doubt not will make very liberal subscriptions. Here on the Atlantic Coast where we are in the midst of a never-ceasing commercial activity, we have not given all the thought to the subject we should, but if the people of New York wish to make this city the mart of the world, if they wish a new trade greater than they have ever before enjoyed, if they desire to see their country stronger, more prosperous and more stable than ever, let them take hold of this railway and see that it is made. The British East India Government have constructed more than one thousand miles of railways in its Eastern possessions during *the last year*; what they have done, we certainly can do.

Opening of the Smyrna and Aidin Railroad.

This well constructed railway, principally the work of English capitalists, was opened up for traffic as far as Ephesus on the 15th of September last, with great ceremony after the fashion of the Orientals. We have before us the Levant *Herald* of the 24th September, published at Constantinople, in which there is a full account of the proceedings. Among the notabilities present was Mehemed Redschid Pacha, Governor General of Smyrna; and a singular circumstance is, that for the first time in the East, Christians, Jews, Turks, and Armenians sat, ate and drank together at the banquet given in honor of the occasion, and fraternized in the most harmonious manner. From the *Herald* we learn that the road is well built, that the business is rapidly increasing, and even the opposition of the old camel drivers is giving way in view of the practical benefits now realised. Since it partially commenced business in 1860, the road has had 349,700 passengers, and its future income is calculated at one million of dollars per year. One of the most curious parts of the ceremony was the consecration by a holy Dervish with the name and title of Sheik Shaker who delivered the following prayer in Arabic. It is the custom of some Christian denominations, particularly in the old world to consecrate bells and locomotives, but in general devoutness and the appreciation of internal improvements, we think they could not surpass these despised Turks. For example:—

"God preserve us from Satan the damned! In the name of the most clement and merciful God, Amen.

Oh Thou who didst bestow intelligence upon man, and who didst make him the superior of all other created beings. Thou who didst create the professions and didst distribute them to every man according to his capacity, bless the best of thy creatures—Mahomed—as well as all those that believe in him, Amen. Oh Thou ruler of the Universe preserve our Padishah—that upholder of the holy law—on the throne of his glorious ancestors in strength and happiness, Amen. Lead him always in the ways of justice and of peace, grant Thy divine protection to his allies, and friends, and scatter his enemies as dust, with the strength of Thy sword, Amen. Strengthen more and more the foundations of the government of His Imperial Majesty Abd-ul-Aziz in progress and well being, Amen.

Grant Thy aid and protection to all the Sultan's counsellors who form the pillars of the empire, and maintain their good intentions, Amen. Preserve him who rules this province, the mudir Mehemed Reshid Pasha, uphold him in all his works and grant him joy and prosperity forever, Amen.

Most high God, Father of all creatures, grant that *such works of prosperity and progress be multiplied a thousand fold in all Mussulman countries*, with the concurrence of the great and magnanimous Queen of the Christians, Her Majesty the Queen of England, Amen. Heap upon her thy celestial benedictions, cover her with thy wings, and render her happy in both worlds; in the world present, and the world to come, Amen. Grant that her friendship and help to the Ottoman government and the Mahommedan nation continue without interruption through all ages; Amen. May her heart be forever filled with these noble sentiments; Amen. May the solid and amicable alliance which exists between the two governments last forever, Amen. *Allah! prosper the vast expanse of the empire by the increase of roads and other communications, and by the progress of agriculture and commerce, Amen.*

Grant God, Lord of Lords, Almighty Maker preserve in good health and long life, the Directors, Contractors and all those who are employed in this great and useful enterprise, and reward them with Thy inexhaustible benefits, Amen.

O God our benefactor, Author of our existence, Ruler of heaven and earth, *hasten the completion of this important road constructed with iron, and multiply the number of similar undertakings, Amen.*

Praise to God, ruler of the Universe, Amen. Blessed be the God of strength, Amen. Honor and glory to his saints elect, Amen. Salvation and blessings to the Prophet the best of men, as also to the other prophets and apostles sent by God, Amen."

Central Railroad of New Jersey.

The following is a comparison of the Receipts, Expenses and net earnings of the nine months ending September 30th, 1862, with the same months of 1861:

	1862.	1861.	Increase.
Receipts...	$974,356 35	$871,866 61	$102,489 74
Expenses...	448,803 63	377,459 50	71,344 13
Net earnings	$525,552 72	$494,407 11	$ 31,145 61

The following disposition has been made of the net earnings		$525,552 72
Interest for 9 months	$104,389 66	
Quarterly Dividends 7½ per ct. for 9 months	272,250 00	
United States Taxes	3,364 38	
		$380,004 04
Surplus of net earnings, 9 months		$145,548 68

Against $117,894 89 for the same period last year.

In Passenger receipts there has been a falling off of $11,441 38, in Merchandise, an increase of $92,110 79, and in Coal an increase of $19,543 79. The deficiency in coal reported last July, owing to the interruption of trade by the June freshet, has thus been more than made up already. The nominal increase of $71,344 13, shown in expenses, arises from changes in the mode of keeping the accounts. The amounts paid for use of coal and other cars are now added to the expenses instead of being deducted from the receipts, and this accounts for over one-half of the increase. The balance is nearly accounted for by charges for Iron &c., in the nine months, which before went into the last three months of the year. An increase in expenses, from the increasing prices of materials, must however be expected.

Chicago, Burlington and Quincy Railroad

The Chicago, Burlington and Quincy Railroad Company will distribute to the stockholders on the 15th one share of new stock for every five shares of the old held on the 1st. Fractions will be settled for in cash, at the rate of $100 per share. This is to represent the undivided earnings of the company for the previous four years. At the same time the dividend will be paid of $4 per share, free from Government tax, in cash, from the net earnings of the past six months.

Great Western Railway of Canada.

REPORT OF THE DIRECTORS.

The receipts on capital account during the last half-year amounted to £2,644 15s. 6d. and the total receipts to the 31st July 1862, were £5,220,945 0s. 6d. The outlay during the half-year consists of the cost of fishjointing 12½ miles of rails, the conversion of 75 freight cars into wheat cars, the laying down of additional sidings for the increased goods traffic, and the proportion fairly chargeable to capital of the cost of stone and iron bridges in substitution of wood; these charges amount altogether to £7,858 13s. 4d., making the expenditure on capital account £5,019,302 2s. 3d., and leaving a balance at the credit of that account of £201,642 18s. 3d. The revenue account for the past half-year is as follows:—

Gross receipts		£246,228	17 2
Working expenses, including maintenance of way, taxes, insurances, and rent of Suspension Bridge		129,051	2 9
Balance		117,177	14 5
From this there has to be deducted—			
Interest on Government loan	£17,498 5 0		
Do. on Company's bonds, &c.	34,658 0 9		
Loss on the conversion of American currency	6,953 15 10		
Renew'ls of rails, sleepers, bridges, &c	35,222 4 7		
Flamborough accident account	260 3 10		
		94,592	10 0
Leaving the balance from the half-year's working		22,585	4 5
To this has to be added the surplus from last half year.	£14,054 6 6		
Less expenses of committee of investigation	8,816 4 0		
		5,238	2 6
Leaving available for dividend		£27,823	6 11

Out of which the board recommend the payment of a dividend at the rate of 1½ per cent. per annum, which will absorb £25,118 17s.11d., leaving a balance to be carried to the credit of the current half-year of £2,704 9s. 0d. The following statement will exhibit a comparison of the receipts and expenses for the last four half-years:—

	RECEIPTS.				EXPENSES, including taxes, insurance, and Suspension Bridge rent.
Half-years.	Passen. mails, and sundries.	Freight and live stock.	Rents.	Total.	
	£	£	£	£	£
Jan. 1861	123,251.	128,619.	953.	252,824.	121,407
July, 1861.	95,772.	112,800.	744.	209,316.	129,616
Jan. 1862	104,168.	161,070.	714.	265,952.	125,425
July, 1862.	93,918.	151,607.	704.	246,229.	129,051

From this it will be seen that the gross traffic has increased by the sum of £36,912 10s. 7d., as compared with the corresponding half-year of 1861. It is, however, to be noted that the charge of maintenance of way is now less than it was during that period by the sum of £6,545 12s. 3d. The working expenses of the past half-year show consequently at the rate of 52·41 per cent. as compared with 61·92 per cent. in the corresponding six months. The locomotive charges are now at a lower rate per mile than they have hitherto been, and it is satisfactory to find that this reduction of expenditure has been carried out notwithstanding that five new engines have been added to the stock, and that very extensive renewals and improvements have been effected in a large number of the engines, the whole cost of which has been charged to the revenue. A very serious loss amounting to the sum of £6,953 15s. 10d, has been incurred during the last half-year, owing to the depreciated value of the American currency in which this Company's proportion of the through rates are paid, and the adverse exchanges at which remittances were made. A portion of this loss has been incurred on local traffic from Canada going across the frontier to places in the United States. For the future it has been proposed to the Grand Trunk and Buffalo and Lake Huron Companies, to require that all freight going from local stations in Canada to places in the United States should either be prepaid, or upon the property being handed over to the connecting lines at the frontier, have an addition made to the charges equivalent to the premium on gold at the time. To adopt the same course with "through" traffic is a more difficult matter, because the charges on that business can only be fixed in concert with the American competing lines, as well as with those connecting with the Great Western. The report of the engineer on the state of the road, which was submitted to the Proprietors at the general meeting in London on April 11, 1861, will have prepared them for a large expenditure in renewals. The Directors are sorry to observe that the outlay deemed absolutely necessary by Mr. Reid during the past half-years has exceeded that officer's estimate, but the future expenditure on this item will, of course, be reduced in proportion to the charges now incurred. The receipts of the Detroit and Milwaukee Railroad have continued to increase very satisfactorily. The net traffic on that line for the year ending June 30th, 1862, amounts to $340,897.93c., which is more than sufficient to meet the interest for that period on its first and second mortgage bonds. The gross traffic receipts for 36 weeks from January 1st 1862, show an increase of £21,153 over those of 1861. The arrears of interest due to the Great Western Company for the loans of £250,000 now exceed £100,000. The application for a bill to permit of the arrangements contemplated between the three Canadian Railway Companies having failed to obtain the sanction of the Canadian Parliament, the whole plan in consequence came to an end. No further steps will be taken in this matter without first consulting the Shareholders. The Directors feel, however, that although the actual scheme is abandoned, great benefit has arisen from its entertainment, in the proof which the late harmonious action has afforded of the great mutual advantages sure to result, in Canada especially, from unity instead of rivalry betwixt neighboring railways. The objection to appointing a successor to Mr. Brydges having ceased with the bill above referred to, the Directors lost no time in publicly advertising for a new manager. From amongst the applicants who came forward, they were unanimous in selecting Mr. Thomas Swinyard, who had been fifteen years in the service of the London and North Western Railway, for the appointment, and from the unusually high testimonials and character which that gentleman received from a variety of quarters, the Directors believe they have obtained in him a most competent officer. Mr. Swinyard assumed charge of the line on September 2nd last. The Directors have to report that the suit instituted by the Commercial Bank of Canada against this Company was heard at the a sizes at Kingston, Canada West, on May 12th and following days, and a verdict was given by the jury against the Great Western Company, subject to the opinion of the court upon several points especially reserved by the judge as ground of nonsuit. The points in question were brought before the Court of Queens Bench upon a rule *nisi*, and application has also been made for a new trial upon the ground of the improper reception of evidence, and for misdirection on the part of the judge. The arguments were heard on August 28th and 29th, and a decision may shortly be expected. In the meanwhile the Directors have only to say that their legal advisers in Canada continue most confident in their expectation of a decision in favor of this Company. Several difficulties having arisen to the completion of the branch line contemplated to the oil springs of Enniskillen, before the winter, the board have delayed entering upon the matter till next spring, when they hope to have a greater experience of the value and requirements of the earth oil district. In the meanwhile the necessary surveys have been proceeded with, and the works will be commenced whenever the season permits. The grain elevator at Hamilton has been rebuilt, and is now in full operation. It is a larger and better building than the old one, and its cost has been defrayed out of the amount standing at the credit of the insurance fund. The accounts of the harvest in Canada are of the most satisfactory character, and encourage the hope that in spite of the heavy drawbacks attendant upon a civil war in the States, the home as well as foreign traffic of our district will continue to improve. Signed on behalf of the board of Directors in England,

F. S. HEAD,
Chairman of the English board.

London, October 1st, 1862.

DIRECTORS.—President, Robert Gill Esq., Apps Court, Surrey; Vice President, John Young, Esq., Hamilton, Canada West. Financial Director and Secretary—Thomas Reynolds, Esq., Hamilton, Canada West. Canadian Board—John Young, Esq., chairman, Hamilton, Canada West; Richard Juson, Esq., Hamilton, Canada West; Henry C. R. Becher, Esq., Q.C., London, Canada West, Frederick W. Gates, Esq., Hamilton, Canada West. Ex-officio Director—the Mayor of Hamilton, Canada West. English Board—Frank Somerville Head, Esq., chairman, Pit-place, Epsom; Robert Gill, Esq., Apps Court, Surrey; Alexander Hoyes, Esq., Bitterne Grove, Southampton; Thomas Faulconer, Esq., 12, Copthall Court, London; Thomas Service, Esq., Glasgow. Auditors—Henry Waite, Esq., 68, Old Broad-street, London; William Lance, Esq., 26, Throgmorton street, London. General Manager—Thomas Swinyard, Esq., Hamilton Canada West.

Capital Account, Receipts and Expenditure to 31st July, 1862.

RECEIPTS.	Sterling.
	£
To original share account—	
For amount received on 117,769 shares (including 26,170 new shares paid up in full and conveted into original shares), viz.:—	
On 114,350 shares on English register, at £20 10s. sterling per share	2,344,175
On 3,419 shares on Canadian register at 100 dols. per share, converted at 109½ per cent. exchange	70,253
To new share account—	
For amount of 1st, 2nd, 3rd, 4th, 5th and 6th calls on 51,931 new shares (after deducting the 26,170 new shares paid up in full and converted into original shares), viz.:—	
On 51,589 shares on English register at £18 sterling per share	£928,602
On 342 shares on Canadian register at 87·60 dols. per share, converted at 109½ per cent. exchange	6,156
	934,758
Less amount of arrears on 3rd, 4th, 5th and 6th calls	3,639

A Pacific Railroad Argument.

The *Territorial Enterprise* says the best estimates put the amount of freight required for Washoe and its dependencies, during the eight winter months, at 28,000,000 lbs. At 4½ cents per pound the freight on this would amount to $1,260,000. This is a forcible argument in favor of a railway across the mountains.

The Junction Railroad.

A junction railroad is now being constructed at Philadelphia, under the auspices of the Reading, Pennsylvania Central and Philadelphia, Wilmington and Baltimore Railroads. This new road will be located on the west bank of the Schuylkill river, from Columbia bridge to Gray's Ferry bridge, a distance of about five miles, and will unite the Reading road with the Pennsylvania Central, and the Philadelphia, Wilmington and Baltimore with the Media and West Chester Road. From the Columbia bridge it will keep near the river on the west side, crossing the Pennsylvania Central near the Wire bridge, passing under Market and Chestnut streets by tunnels, and terminating at Gray's Ferry bridge. This will enable freight intended to be transferred from one road to another to pass around the city, and thus evade the present nuisance of cars by horse-power, reducing the expense, and greatly facilitating and increasing the business of the Philadelphia terminus of these roads. At the present time, freight coming to the city by one line must be drawn through the streets by horse-power, in order to reach the locomotives of either of the other lines. Freight intended for the southern part of the city will be conveyed by means of the junction road, across the new iron bridge over the Schuylkill near the arsenal, and from thence down Washington avenue, thus avoiding the present route by mule-power down Broad street. The city will thus be surrounded by a locomotive railroad. The anticipated cost of the road will be $500,000. It is being built by contract, and will be owned jointly and equally by the Reading, Pennsylvania Central, and Baltimore and Wilmington Roads.

Appraisement of Lands taken for Railroads.

RIGHTS OF MINORS. A COURT MUST NOT ONLY APPOINT A GUARDIAN OR ATTORNEY, BUT SUCH ATTORNEY MUST ACTUALLY APPEAR AT THE APPRAISEMENT IN ORDER TO CONFER A VALID TITLE UPON THE COMPANY.

An action was brought by one Leman B. Hotchkiss and Lucretia his wife, against the Auburn and Rochester Railroad Company to recover the undivided half of three and 6-10 acres of land in the county of Ontario, occupied by the railroad track of this company. The action was commenced in the New York Supreme Court on the 17th of May 1849, and was tried in February 1861.

It appears that one Thaddeus Oaks, of the town of Phelps, died in 1824, seized of a farm in that town, called the Oak's farm, embracing the premises in question, leaving him surviving, his wife Fanny, and two children Nathan and Lucretia; that Thaddeus Oaks had owned and possessed such farm, and had resided upon it in the town of Phelps from the year 1800 until he died. Fanny Oaks intermarried with Elias Cost in 1828. Mr. Cost died in 1850 and Mrs. Cost in 1851. Lucretia Oaks married Leman B. Hotchkiss on the 1st of May 1844, and died July 31, 1855, leaving five children. Lucretia Hotchkiss was born March 4, 1824, on the Oaks farm, and lived and resided there with her mother until she married Leman B. Hotchkiss; and during that time she was only temporarily absent at school, at different times in 1839, '40, and '41. Her residence was in the town

of Phelps from her birth until her marriage. The defendant took possession of the premises in question, in May 1841, and constructed a railroad thereon, by making excavations and embankments, and laying and completing the track, and soon after, in July 1841, commenced running their cars on the road. Ever since taking possession the defendant had retained the possession and used the land for the purpose of its track and the running of its cars, and the operation of the said road, holding exclusive possession and claiming exclusive title, and denying the right of Nathan Oaks and Mrs. Hotchkiss, and the plaintiffs to any interest therein. After Cost married Mrs. Fanny Oaks, Lucretia lived in their family, and during this period Cost sent her to school at Albany. She died July 31, 1855, after the commencement of this suit, leaving five children, all under the age of twenty-one years. On the 27th of September, 1858, Leman B. Hotchkiss, as executor of the will of Mrs. Hotchkiss, and the children by their father, as guardian, were substituted as parties plaintiff in the action in the place and stead of the said Lucretia, by an order of the court.

The defendant, at the trial, to establish title in itself, introduced evidence of proceedings for the appraisement of the premises in question, proposed to be taken for the construction and accommodation of its railroad as against Nathan and Lucretia Oaks, under the act to amend the act for the construction of the defendant's railroad, passed April 18, 1838. All the proceedings required by the act, including the certificate of location, were proved by competent evidence, by the production of the originals, or by the record of the same, or sworn copies, except the petition, which having been lost, and due proof of its loss having been introduced, its existence in due form, and also its contents and verification, were proved by Amos Jones, the judge to whom it was presented, and who made the order for drawing the jury &c. The notice of the drawing of the jury of appraisers required by the 3d section of the act aforesaid was served upon Lucretia Oaks, as required by that section, by leaving the same, on the 15th of February, 1841, at her place of residence in Phelps with her mother at the house of Mr. and Mrs. Cost, where Lucretia resided; she, at the time of such service being absent from home. A like notice was served upon her, of the meeting of the jury of appraisers on the 6th of March 1841.

Among the points presented by the plaintiffs attorneys was the following:

That it did not appear that Thomas Smith, the person appointed to appear for Mrs. Hotchkiss to represent her interests before the appraisers, appeared before the jury of appraisers at all; but the contrary was shown; nor did it appear that a notice of the meeting of appraisers was served on Mr. Smith.

The jury, under the direction of the court, rendered a verdict in favor of the plaintiffs for an equal undivided half of the premises described in the complaint, assessing the damages of the plaintiff for withdrawing the same at $900. An appeal was then taken to the Monroe General Term; which court now hold the point taken by the plaintiff to have been good. That it is indispensable that some proper person should be appointed to appear for an infant before the jury of appraisers to represent her, and to attend to her interests on the appraisement. And although an attorney is appointed to appear before the jury and protect the interests of the infant there, yet if he fail to attend before the jury, or to represent her interests there, his appointment is nugatory. The statute is not complied with simply by making an appointment of an attorney for the infant owner by the county judge sufficient in form; but it is the duty of the railroad company to see that some reliable person is appointed who shall in fact personally appear before the jury and protect the interests of the infant. And until such appointment and appearance the jury have no jurisdiction to entitle them to proceed to appraise land, or the damages for taking the same.

The court also held that upon the death of a person seized of real estate, all claim for damages done to the estate, and for the rents and profits thereof down to that time, go to his executor, and belong to the personal estate. Therefore in ejectment by devisees, the plaintiffs are only entitled to recover the possession of the premises, with damages for withholding the same, and the rents and profits thereof, from the time their title to such rents and profits accrued. As in this case the damages were recovered in gross, the court ordered a new trial. The following is that portion of the opinion, rendered at the decision of the case, relating to the appointment of an attorney and his appearance before the appraisers.

E. Darwin Smith, J.—The action is ejectment to recover the undivided half of 3 6-10 acres of land taken by the defendant, in 1841, and since used by it for railroad purposes; and unites, as is allowed by the code, a court for use and profits of the land. The title of Lucretia Hotchkiss in her life time, to the premises in question, and the right of recovery for the same by the present plaintiff, is unquestionable, unless such title was divested by the proceedings of the defendant to acquire such title, under the acts of 1836 and 1838, incorporating the defendant and prescribing the manner in which it might acquire title for the use of such corporation, independently of the questions which arise upon the anti-nuptial agreement between said Lucretia and the plaintiff Leman B. Hotchkiss, and other questions which arise upon the defence. The proceedings instituted by the defendant before the Hon. Anson Jones, county judge of Ontario County, for the appointment of a jury of appraisers to assess the value of the land required for the construction of the defendant's railroad, in and through the County of Ontario, having been admitted in evidence by the circuit judge, present no question of exception on the part of the defendant, except so far as such proceedings are held invalid. Such proceedings as presented in the evidence, disregarding all other objections made by the plaintiffs therto, do present one ground of defect in the defendant's title to said premises, which I think entirely unanswerable. Lucretia Hotchkiss was, at the time of instituting such proceedings, a minor, and was at the time absent from her home and domicil—her mother's house in Phelps—attending school in Albany. Conceding that the service of the several notices of said proceedings was properly made upon her, according to the provisions of the defendant's charter as amended in 1858, still as she was an infant, it was indispensable that some proper person should be appointed by the county judge conducting such proceedings, to appear for her before the jury of appraisers, to represent her, and attend to her interests on the appraisement.

The appointment of Thomas Smith to appear before said jury and attend to her interests on such appraisement, was sufficient in form, but the non-attendance of said Smith before the jury, and his entire neglect in any way to appear for, or represent her interests before the jury, renders such appointment entirely nugatory. The statute was not complied with simply by the making of an appointment of an attorney for her, by the judge, sufficient in form. It was the duty of the defendant to see to it that some reliable person was appointed, living in the vicinity, who should in fact personally appear before the jury and attend to and protect her interests, upon such proceedings. Until such appointment and appearance the jury had no jurisdiction of her person, to entitle them to proceed to appraise the land, or the damages of the said Lucretia, for the taking of such land by the defendant. The statute was designed to secure the actual attendance of some fit person, before the jury, as guardian or attorney, to attend personally to the interests of the infant upon such appraisement. And without such appearance, all the doings of the jury, in the proceeding, are entirely unauthorized and void. The title of the defendant to the property, therefore, fails.

Cazeline—The New Light.

The discovery of the oil-wells of the American continent led to the expectation that a great advance would take place in our means of illuminating. The expectation was not, however, realised in the first instance. Much of the American oil was sent over to this country imperfectly rectified, and of a very light specific gravity. It was highly explosive, and, as our readers probably know, very serious accidents, attended in one or two instances with loss of life, resulted from its incautious use. Moreover, these oils, as prepared and sold under the name of paraffine, have a rank odor, which is by no means agreeable in a sitting-room, and must be injurious to health. So strong was the sense entertained of the dangerous character of these oils, that the Legislature passed an Act, imposing a pecuniary penalty, with the forfeiture of the article, upon persons keeping the dangerous oils within a given distance of any human habitation or store. Paraffine was the lowest priced oil hitherto introduced; but, for the reasons mentioned, it was very far from meeting the wants of the public.

At length, however, a hydro-carbon oil has been produced, which possesses all the qualities required to render it generally acceptable. It is as cheap as paraffine, it burns with a pure and brilliant light, and is as safe in use as a common candle. This new oil, which is called Cazeline, is as white and clear as water, and will burn in any paraffine or mineral oil lamp. The invention has been patented, and a company has been formed, which is producing the new oil in considerable quantities. Already a large demand exists for this oil, which, we think, is likely to supersede all other illuminating agents for general use. The company also produces machinery and lubricating oils, and substitutes for turpentine, which commend themselves to notice by their cheapness and superior quality.

We make no apology for introducing the Cazeline oil to the notice of our readers; for a brilliant light is so great an attraction in a home on a long winter's evening, that a discovery which places such a light within every one's reach is of social importance, and deserves to be made known as widely as possible.—*Casell's Family Paper.*

American Railroad Journal.

Saturday, November 8, 1862.

Stock and Money Market.

The market for the last week has been quiet, in part perhaps owing to the interest felt in the election, but it is considered strong notwithstanding its apathetic condition. The great problem of the hour is still the currency question, and the wisest are at fault in their most carefully proposed solutions. Gold has risen and fallen alternately, and on Wednesday stood at 130¾. Exchange is quoted at about 145½a146, Government stocks have not appreciated nor have many of them been thrown on the market, for as a rule those who buy them are able to hold them and bide their time. Dutiable demands have had but small inquiry, and stand at about 126½, and 7-30s are steady at 105a105½. The ease of the money market continues, and the Government has no difficulty in getting what it wants, by its power to issue paper of some kind when it wants. It is believed by many sensible people, that the present circulation afloat is none too large for the accommodation of the active business of the country, which we must not forget has been increasing in a most remarkable manner. We are advancing. The circulation of bank paper and the value of our agricultural products and manufactures have by no means kept on in equal ratios. This is evident from the following figures:

	Circulation.	Products agricultural and manufactured.
1840.	$106,968,572	$900,000,000
1850.	155,012,911	2,000,000,000
1860.	202,000,000	3,600,000,000

Thus in 20 years our circulation had not quite doubled, while our products are four times greater than they were.

So of our exports and imports, they were in the aggregate in

1840	$239,000,000
1850	330,000,000
1860	762,000,000

Our railway system has made similar progress. In 1850 the mileage constructed was only 8,590, at a cost of $296,000,000. In 1860 the mileage was 31,196, the cost $1,166,000,000. Did gold work these miracles? No, they are the result of the genius, the industry, the soil, and the credit of the country. These are still our working *capital*, which will carry us through all our present difficulties, enable us to pay our national debt, and build the Pacific Railroad, the grandest project of the age, and one certain to make our commerce the most extensive of any on the globe.

As to exchange, we learn that at the present rates, shippers find a profit in their business, since they realise good prices abroad in gold, for that which they buy at home with paper, which in home contracts is the same to them as gold. The article shipped bears a profit small or large as the case may be, and when converted abroad is good for exchange drawn at a high rate against it, and the proceeds of that exchange used by the shipper are the same in the discharge of debts and contracts as gold itself. If the articles exported rose in price here in the same ratio as gold, it would we admit be a different affair, but it is not so. In most of the material supports of life there is no advance. Food, clothing, flour, fruit, fish, vegetables are not much if any advanced in price, nor lands, nor houses, nor rent, nor salaries, but the contrary. Therefore we are in fact getting a decided commercial advantage. This idea is also sustained by the fact that our exports are exceeding our imports. For the last fortnight in this city alone they amounted to ten millions of dollars, while the imports were so much diminished as to leave a large balance to our credit abroad. How long can this go on without turning the tide of gold once more to our own shores?

There is also a very cheering view to be taken as regards our national finances. An official statement of Mr. Chase has been generally published, which gives the Government debt so far, at about six hundred and fifty millions. What will our readers think when we inform them, that the proceeds of the revenue from the present tariff and the direct taxes is already estimated at Washington as very likely to reach three hundred millions of dollars a year, so far have the results exceeded the estimates of our wisest financiers. Our national debt is therefore nothing to excite alarm under such a state of things. Let this rebellion be put down promptly, and a large reduction in our present taxes will be an early duty of the next Congress.

From personal observation we know our manufacturers are doing well, and do not mind the taxes they are paying to sustain the national Government. They are over run with work, not only in this state but the neighboring states. A recent visit to Philadelphia enables us to say of our sister city that she has her hands full, and unfortunately not hands enough to do all she might.

Our readers will see that we are of the number of those who never despair of the republic, nor for a moment doubt its power of recuperation under any difficulty or danger.

In another column they will perceive an advertisement of government bonds which offer advantages to purchasers, of a decided character according to our theory and present views. The well known and responsible house of Vermilye & Co., offer for sale what are designated as the "Five-twenties," which at present rates of gold yield about 8 per cent; these are amply secured, the interest is payable in gold semi-annually and at the end of five years for which they run, will in our opinion be paid in gold or its equivalent, for at that time the national debt will cease to be a source of anxiety, and the government notes and gold and silver will be convertible measures of equal value. Thirty dollars per head of our present population would to day wipe out the whole National debt.

The following sales of securities are in addition to those given elsewhere in our columns:

New York.—Joliet R. R. bonds, 104; Norwich and Worcester, 77 and 79; Indianapolis and Cincinnati, 53; Warren R. R. 98 and 100; California Large Bonds, 7s, 112½ and 113; Stonington, 100; Illinois coupon bonds, 1870, 104½; Rome and Watertown, 83; Illinois Central full paid stock, 78; Goshen Branch bonds, 104; Cumberland Coal pref., 13¾; Nicaragua Transit Co., 4 to 7. The quotations on Thursday were: Hudson River R. R., 1st mort., 115; do., 2d mort., S. F., 112; N. Y. and Harlem 3d mort., 90; Michigan Central 8s, 1869-'72, 110; Chicago and N. W., Interest bonds, 89; do., 1st mort., 75; Lackawanna and Western bonds, 106; Del., Lack., and Western 1st mort., 110; Galena and Chicago 1st mort., extended to 1882, 110; do., 2d mort., 108; Central New Jersey 1st mort., 112; do., 2d mort., 110; Cleveland and Pittsburg 1st mort., 101½; do., 2d mort., 100; do., 3d mort., 94; Erie 2d mort., 1879, 113; Mil. and P. du C., 1st pref., 103. New York city railroad stocks are scarce. The quotations are: Third Avenue Railroad, 190; Second, 60; Eighth, 150; Brooklyn City, 125.

Boston.—Worcester and Nashua, 65; Concord, 60½; Nashua and Lowell, 122; Concord and Portsmouth, guaranteed, 110; Cheshire 6s, 103; Vermont Central 1st mort., 23¾; do., 2d mort., 1½; Ogdensburg 1st mort., 89¾; do., 2d mort., 6⅜; Boston City 5s, 1864, 106¼; do., 1875, 110; do., 1878, 111¾; Bangor 6s, 1865 and 1868, 102; Acton Copper Co., 7; Huron, 9¾; Toltec, 3⅞ and 4⅛; Pontiac, 5¾ and 7; North Cliff, 1¼, South Side, 2; Petherick, 2⅝.

Philadelphia.—City 5s, 90; Camden and Amboy 6s, 1870, 105; do., 1873, 102½; Cleveland and Mahoning 1st mort., 105; Huntington and Broad Top 1st mort., 85½ and 90; Little Schuylkill 7s, 98; Reading 6s, 1844-'80, 110½; Schuylkill Nav., 5¼; do., pref., 15; do., 6s, 1882, 68¾ and 70; Chesapeake and Delaware 6s, 93 and 95; Delaware Division Canal, 89½; do., bonds, 104; West Branch bonds, 62; Susquehanna Canal, 5; North Pennsylvania mort., scrip, 77½ and 78½; do., Chattle 10s, scrip, 70½; Morris Canal, 55; Pittsburg, Ft. Wayne and Chicago 1st mort., scrip, 107¼; 17th and 19th streets, 8½; 2d and 8d streets 2d mort., 108; Hazleton Coal Co., 49½.

Baltimore.—N. W. Va., 1st mort., 101; do., 2d mort., 96¼; Canton Co., 18⅝; Springfield Mining Co., 2.45; Guilford, .50; Silver Val., .25; Gardiner Hill, .95; Balt., and N. C., .25.

Slipping of Locomotive Wheels.

Every one knows, we presume, that the wheels of a Locomotive Engine frequently slip along the rails, either from their moist or greasy condition, or the character of the grade. This is injurious both to the Engine and to the rails, for very obvious reasons. To remedy this, sand is generally sprinkled on the rail, but it is not very efficient, as it is easily crushed into dust. We observe that a patent has been issued to T. Selleck, of Greenwich, Conn., for a material which overcomes this difficulty successfully. This is a granulation of Franklinite metal, one of the hardest we have, which being broken into pieces no larger than the head of a pin, is spread for a few feet on the rails in front of the wheels of the Engine, and thus forms a hard and resisting surface which increases the friction and the tractive power, and prevents the slipping of the wheels. It is obvious that to start, and above all to stop an Engine at will, is a great desideratum, the latter especially, in moments of danger. The simple application of Mr. Selleck seems fully to meet these cases. No Engineer should therefore be without this article, than without his hammer, wrench or jack-screw.

American Opium.--Trade with China.

Mr. E. Weiss a gentleman who has traveled extensively in the East, has turned his attention to the subject of raising opium on the Pacific Coast, for the purpose of competing with the British in the East Indies in the trade of this article. Having seen testimonials as to his character and ability signed by eminent merchants and official authorities, we are disposed to give all the publicity in our power to the following ingenious programme. It presents a fine opportunity for the colonization of the free colored people of this country, employment of men, women and children, and remunerating labor on the soil of the U. S. His plan is to establish a Company to be called the *California and China Company for the production of Opium in Southern California.*

Capital stock only $25,000, in shares of moderate size. The proceeds to be expended.

For the purchase of land agricultural implements	$6,000
Building on the plantations	4,000
A vessel of 250 to 300 tons	8,000
Load of lumber for the Egyptian market	1,500
Expenses of voyage, traveling and transporting 20 Greek families, men, women and children to introduce the cultivation	5,500

Proceeds of the sale of lumber to be retained as working capital, &c. He proposes to engage his first company of oriental laborers, as follows. A free passage and board and lodging for five years, and wages at the rate of $4 per month for adult laborers. At the end of the five years, each laborer is to receive a grant of 30 acres of land from the Company.

The laborers to agree to furnish for the next or second five years thereafter, to the company 100 lbs. of opium at $2 per lb. and at the end of this term they are free to dispose of their own property and products.

As the cultivation of the poppy only requires three months and a half in the year, the remaining time can be devoted to raising food, cattle, and general agriculture products of the country, and particularly raising and curing figs and grapes, in the Smyrna and Malaga fashion. With fifteen hands, fifteen acres may be put under cultivation of the poppy in the run of a fortnight, which at

the rate of production per acre, 120 lbs at $6 per lb. will give $10,800. And this will cost in the production not more than a dollar per lb. Thus with a hundred hands, ninety acres could be put under cultivation, the product of which would be 10,800 lbs. of opium. Admitting that the laborers thus contracted with, worked but 35 lots of ground at the expiration of the first five years, the result then would be an annual production of 3,500 lbs. of opium for the Company, for the next five years at the fixed price of $2 per lb. This statement is based on the labor of 20 families only, but of course a larger working force would produce a larger production in the ratio of that force.

By the permanent settlement of these laborers, the remaining property of the Company would be greatly enhanced in value. Besides the opium product, the result of only three and a-half months, labor, the agricultural products of the remaining part of the year would be valuable, and more than enough to meet the expenses of the colony. In short Mr. Weiss calculates that besides giving a new impetus to our trade with the East, by which San Francisco and New York would be greatly benefitted, it would especially open to the colored people desirous of emigrating, a healthy climate, regular and certain employment, and a future which it is doubtful if they at present could hope for any where else. More than this, there is a strong probability that if the Colony is founded without delay, a large influx of the persecuted christians in Turkey would at once emigrate to the shores of the Pacific.

New York Canals.

The quantity of flour, wheat, corn and barley left at tide water, from the commencement of navigation to the 31st October, inclusive, during the years 1861 and 1862, was as follows:

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1861	1,031,655	21,591,082	19,123,496	1,132,123
1862	1,240,507	26,212,676	18,161,236	1,065,682
Inc	208,852	4,621,594	*962,260	*66,441

*Decrease.

By reducing the wheat to flour, the quantity of the latter left at tide water this year, compared with the corresponding period last year, shows an increase of 1,203,464 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide water from the commencement of navigation to and including the 31st of October, in the years indicated:

Canal opened.	1860. April 25.	1861. May 1.	1862. May 1.
Flour, bbls.	925,405	1,031,655	1,240,507
Wheat, bush	12,164,999	21,591,082	26,212,676
Corn.	13,244,039	19,123,496	13,161,236
Barley	1,839,839	1,182,123	1,065,682
Oats	5,447,211	4,341,625	3,136,688
Rye.	271,290	561,250	726,077
Beef, bbls.	5,283	601	12,746
Pork, bbls	7,071	8,356	154,156
Bacon, lb	458,464	583,900	5,823,796
Butter, lb	1,136,670	1,075,383	2,300,802
Lard, lb	995,035	803,893	8,306,607
Cheese, lb.	6,224,014	3,346,737	3,196,190
Wool	2,022,060	1,578,369	1,607,800

Cancellations of Stamps.

The Commissioner of Internal Revenue has decided that in the cancelling of the various stamps in use by the various institutions and corporations, the hand press will answer every purpose.

Camden and Amboy Railroad.

The Camden and Amboy Railroad Company are now constructing two rooms, at the end of the Walnut street pier, for the use of travellers. One will be exclusively for ladies and the other for gentlemen. A ticket office is so arranged in the centre that it will have windows opening into either apartment. The improvement is much needed; passengers, who are obliged to wait, being at present incommoded by the throngs which hurry along the pier on the arrival and departure of every boat.

Finances of Canada.

Statement of the receipts and payments for the year ending 31st December, 1861:

RECEIPTS.

Customs	$4,774,562
Excise	344,665
Post-office	357,015
Ocean postage	100,710
Public works	324,620
Provincial steamers	30,578
Territorial	678 923
Interest on investments	489,305
Sundries	740,933
Total ordinary	$7,841,311
Invest. realized and advances paid	1,116,219
On account of special and trust funds	934,084
	$9,891,578
Debentures, etc., sold	2,764,003
Deficit (provided for by funding)	2,087,253
Total.	$14,742,834

PAYMENTS.

Interest and exchange	$2,829,754
Sinking fund, consol. Can. loan	119,392
Civil government	437,285
Justice, police, and prisons	849,327
Legislature	463,125
Education and lit. and sci. instit	524,694
Hospitals and charities	272,042
Militia and enrolled force	84,687
Census	118,394
Agricultural societies	102,620
Public works, roads, bridges, etc	1,257,481
Ocean and river steam service	432,023
Light-house and coast service	110,462
Redemption of seigniorial rights	224,133
Sundries	2,671,080
Collection of revenues	1,507,463
	$12,003,962
Redemption of public debt	2,738,872
Total.	$14,742,834

Statement showing the liabilities and assets of the Province on the 31st December, 1861:

LIABILITIES.

1864.	1,464,000	1873.	226,322	1881.	1,417,903
1865.	2,148,950	1874.	1,883 067	1882.	2,670 340
1866.	1,276,238	1875.	101.170	1883.	1,139,773
1867.	6,707	1876.	1,811.064	1884.	1,362,180
1869.	2,433	1877.	601,167	1885.	27,169,384

Mahanoy and Broad Mountain Railroad.

A New Source of Coal Supply.—An extension of the Philadelphia and Reading Railroad, under the title of the "Mahanoy and Broad Mountain Railroad," is now supplying Anthracite from the second coal field, heretofore accessible by the Minehill and Schuylkill Haven Railroad only. The new route leaves the Schuylkill Valley at Port Carbon, and reaches the top of the Broad Mountain by heavy grades. The cars are then lowered into the Mahanoy Valley by means of an inclined plane, where they are attached to locomotives, which convey them to different collieries on both sides of the valley within thirteen miles, viz: from Mahanoy city to Ashland. The road passes through the Girard lands, owned by the city of Philadelphia.

Lake Superior Mines.

The product of copper ore by the mines of Ontonagon district, during the nine months of 1862, ending September 30th, was 3,122 tons 1,149 lbs., and the shipments of refined copper were 1,737 tons 1,837 lbs. The Quincy mine produced nearly one third of the ore, the Pewabic and Franklin each nearly one fourth, the Isle Royal more than one-eighth, while the Huron and Hancock produced on 84 and 47 tons respectively.

Upwards of 100,000 tons of iron ore have been shipped from the Lake Superior region this season.

Trade of the British North American Provinces.

The following table gives the imports of the British North American Provinces for 1860 and 1861:

	1860.	1861.
Canada	$34,447,935	$43,054,836
Nova Scotia	8,511.549	7,613,227
New Brunswick	6.944,352	7,080,172
P. E. Island	1,104,260	1,007,792
Newfoundland	6,020,073	6,785,565
Total	$57,028,169	$65,541,592

For the latter year the imports were per head of the population as follows; Canada, $17.17; Nova Scotia, $23.01; Prince Edward's Island, $12.46.

The exports of all these colonies for the same periods were:

	1860.	1861.
Canada	$34,681,890	$36,614,195
N. Scotia	6,619,534	5,774,834
N. Brunswick	6,049.785	5,367,112
P. E. Island	966,883	782,949
Newfoundland	6,055,944	6,785,576
Total	$54,324 036	$55,324,166

Of the imports into Canada in 1861, only $478,-180 came from the other provinces, namely: From Nova Scotia, $280,495; from New Brunswick, $71,939; from P. Edward's Island, $6,443; and from Newfoundland, $119,233. Of these the principal articles were sugar and fish.

The exports from Canada to the other provinces in 1861, were:

Produce of the Mine	$1,342
Do. Fisheries	133,640
Do. Forest	141,964
Animals and their products	97,117
Agricultural produce	605.076
Manufactures	45,825
Other articles	3,975
Total	$1,030,939

Annexed we give a table of the imports of the maritime provinces from the United States for 1861:

	Free.	Dutiable.
N. Scotia	$1,724,101	$913,429
N. Brunswick	1,519,604	1,783,837
P. E. Island	93,376	177,484
Newfoundland	1,353,964	390,537
Total	$4,716,045	$3,240,287

—Making an aggregate of $7,956,332.

The exports of these provinces to the United States for the same period were:

Nova Scotia	$1.523,555
New Brunswick	1,192,214
P. E. Island	376 348
Newfoundland	403,954
Total	$3,496,471

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Oct. 24th, 1862, was as follows:

Passengers	$25,160 94
Freight and live stock	36,982 16
Mails and sundries	1,353 24
	$63.496 84
Corresponding week of last year	58,935 77
Increase	$4,560 57

The receipts of the Grand Trunk Railway of Canada for the week ending October 18, 1862, were:

Passengers	$25,741 52
Mails and sundries	3,016 50
Freight and live stock	64,309 19
Total	$93,067 61
Corresponding week of last year	97,819 39
Decrease	$4,751 78

Railroad Earnings--Monthly.

The Michigan Southern and Northern Indiana Railroad earned in October, 1862 | $325,018 25
Do., 1861 | 274,948 76
Increase | $30,069 49

These are the largest earnings in one month, by $40,000, since the road was built.

The traffic of the Illinois Central for October, 1862, was | $385,356 71
Do., 1861 | 284,020 59
Increase | $101,336 12
The land sales for the month were | $58,057 85
The land collections | 73,014 16

The Chicago and Rock Island Railroad earned in October, 1862 | $153,127 00
Do., 1861 | 146,169 00
Increase | $6,958 00

The earnings of the Hudson River Railroad for October, 1862, were | $239,910 86
Do., 1861 | 178,260 80
Increase | $66,643 96

The Financial Strength of the People and the Government.

The statement in our last CIRCULAR in reference to the amount of the national debt, even if approximately correct, will tend greatly to relieve apprehension as to the probable financial embarrassment of the Government. The amount is small compared with debts that have been contracted at different epochs in our history. It is now about $30 per head of the population of the loyal States. It was very nearly the same, per head, at the formation of Government, and at the close of the war of 1812. Both of these debts were borne and paid off without inconvenience or complaint, and neither constituted, nor were regarded as grounds for apprehension and alarm.

Since the period last named—1812—there has been an extraordinary change in the productive capacity of society which in ratio to its numbers has immensely increased its wealth and its means of defraying large public burdens. The ratio of this increase would be a most interesting and instructive theme, but quite too broad for our space, or for the manner in which we discuss questions of public concern. It is enough to say that, since 1812, the greater portion of the discoveries and inventions that abridge labor, or have added to the number of articles entering into domestic economy, have been made. The cost and price of many articles of prime necessity, such as iron, clothing and fabrics of all kinds have been reduced, all the way from 25 to 75 per cent. One reason that food has not declined in a similar ratio is the enormously increased demand, growing out of the increased ability to purchase and consume. For the production of food, certain conditions may be said to be constant quantities—such as area or space, and variety or quality of soil. The product, with the highest culture, is limited to a certain rate per acre; but in the manufacturing of iron or clothing, a single county either in England or America could supply the world. The amount of production being not at all dependent upon space, but to richness and abundance of coal, ore, population and facilities for transportation. Every simplification of a process inures in part to the benefit of the producer. Hence the enormous increase of wealth of the manufacturing classes, although the prices of their fabrics may have been reduced to one-quarter those paid a few years a go. Within a few years, scientific invention has done as much for agriculture as for the mechanic arts, yet there has been no reduction in the price of food. The demand increases so fast as to maintain prices notwithstanding the greatly reduced cost of production. In the countries of Europe owing to the rapid increase of population upon an already over-crowded soil, and to the progress of manufacturing towns, the area devoted to agriculture is yearly becoming less and less. In this country from the progress of our settlements, it is daily becoming greater and greater. The amount of production increases not only in ratio to the improved processes used, but, unlike that of Europe, in ratio to the increase of our population.

The United States, consequently, have this great advantage over other nations, that they get the full benefit of the improvements that abridge, or add to the profits of, the labor of the greater portion of its population. A bushel of wheat is raised in the West, and sent to market at one-quarter the cost of its production and transportation a few years ago. Yet notwithstanding this reduced cost, a higher price is obtained.

With all our facilities and improvements, our production can hardly keep pace with the

demand from other countries. The increased profits of labor and capital devoted to agriculture, consequently, are enormous. The case of England would be similar to our own if she could get, with the reduced cost of production, the prices of a half century ago. It is easy to see, that in such event she would soon swallow up the world. But in the production of food, whatever is saved by improved methods goes directly into the pockets of our people, and must continue to do so for an indefinite period. We can hardly imagine a state of things that will reduce prices below the average of the past three or four years.

It is this extraordinary productiveness of labor devoted to agriculture, which is the source of the prosperity which we witness on every hand in the North, and which is most strikingly illustrated in the increased earnings and value of the railroad property. Never at any previous period was the internal commerce of the country so vast and active. The earnings of our railroads are fully 25 per cent. greater than ever before known. The movement of freight is, probably, fully 50 per cent. greater, as every year, from the new economies and improvements introduced, reduces the cost and charges of transportation.

The basis of all this prosperity are the products of agriculture. All other interests rise or fall with this. But this great interest in the United States, unlike that in other countries, is capable of almost indefinite expansion. Our people have occupied only a small portion of our wide domain. It is characteristic alone of the United States that the most complicate and elaborate machines used in agriculture can be employed with the same advantage in the West, the first year that the soil is broken, as in any subsequent one. The general surface of the country is so uniform, and the soil so friable and homogeneous, that no work of preparation whatever is necessary to adapt it to the use of mechanical contrivances. Hence production is not as in other countries, mainly in ratio to population but to capital employed. The same amount of manual labor in the grain-growing districts will now cultivate and secure five times the area that it could ten years ago. The productive capacity of the nation has, consequently been increased very nearly in the same ratio.

Among the other results of this profitable cultivation of the soil, has been the extraordinary advance in the value of all kinds of railroad property, due mainly to increased earnings. The advance within the year in the market value of the Railroad securities dealt in at the New York Stock Exchange, has been fully 100 per cent.! The prices at its commencement were depressed far below their actual value; still after all the disappointments suffered, the extraordinary earnings of the present year were necessary to inspire renewed confidence by demonstrating beyond cavil the value of the investments in our public works. This assurance is of the utmost value, not only to the people, but still more so to the government in the evidence it furnishes of their wealth and resources.—*Hallett's Financial Circular.*

Hartford, Providence and Fishkill Railroad.

At the recent annual meeting of the Hartford, Providence and Fishkill R.R.Co., the former Board of Directors were re-chosen. The road has been kept in excellent condition. There is a fair prospect of an increase of business for the ensuing year. The net earnings from operating the road for the year ending Oct. 1, were $126,918 60, showing an increase over the previous year of $28,919 29.

Pittsburgh, Fort Wayne and Chicago Railway.

The official statement of this company to August 31, 1862, shows the following results:

Cost of railway, equipment, structures, &c.		$16,917,566 28
Stock of supplies for current operations	364,211 91	
Due from other Companies	68 875 45	
Miscellaneous assets	387,012 60	
Cash in hand	416,441 12	
Total		$18,154,097 36
Capital stock		$4,819,942 03
Funded debt		12,935,173 00
Due to other Companies		52,159 79
Miscellaneous liabilities		12,970 83
Due for current expenditures in August and prior		197,087 67
Balance to credit of income account		136,764 05
Total		$18,154,097 36

The total amount of cash on hand is $416,441 12.

The earnings for 8 months have been as follows:

Freight		$1,473,040 30
Express		20,800 00
Passenger		590,814 83
Mail		62,600 00
Rents		2,245 36
Rent of Railway		56,666 64
Miscellaneous		4,901 91
Total earnings		$2,211,169 04
Cost of purchase of railway, &c., as ascertained to this date		$18,663,595 16
Less amount of stock of P. F. W. & C. R. Company, not yet surrendered for conversion into this Company's shares.	$1,433,653 14	
Amount of supplies in shops and on the line of railway at the time of purchase by Trustees.	312,375 74	1,746,028 88
Present cost of railway, &c.		$16,917,566 28

Railroad Items.

The Michigan Southern, and Northern Indiana Railroad Companies have been building at their works in Adrian a large number of splendid sleeping cars, constructed of the forest woods of Michigan and the tough iron of Lake Superior. They are so arranged as to have but little motion and are exceedingly comfortable.

The Wisconsin Railroad Companies are also constructing their cars at their own works.

Jeremiah Prescott, Esq., the well known and popular Superintendent of the Eastern Massachusetts Railroad, has resigned his position much to the regret of the Directors of the Company and the traveling public.

It is reported on good authority that the President intends sending a very large number of contrabands to the coal mines of Pennsylvania where there is a want of laborers. If so, it will give additional supplies of fuel and reduce the present high rates.

Lead Mines.

The lead mine in Potton, C. E., is a very rich one, and contains so much silver that the tools of the workmen become coated with it. Still as the ore occurs only in masses, and not in veins, it may run out soon.

A rich mine of the same ore has recently been discovered in Shawangunk, Ulster Co., N. Y.

Opium Trade.

A German gentleman of the name of Weiss has arrived in this city and proposes to establish opium plantations in Lower California. Having travelled much in the East, and had much experience in Asiatic commerce, he is of the impression that opium may be raised in such quantities and so cheaply on our Pacific coasts that we may take the whole of the Chinese opium trade away from the East Indies. A very interesting article from his pen has appeared in the columns of the *Journal of Commerce.*

Horse Railroads.

The Board of Aldermen of Hartford, on the 27th ult., accepted the report in favor of the Horse Railroad on Asylum and State streets, and passed a vote authorising it. This line, will run from State street wharf through Asylum to Sigourney street, through Sigourney to Farmington Avenue, back to the junction with Asylum street. The route is called a good one for dividends.

Street railways are soon to be introduced in the cities of Hamburg and Altona, Berlin and Vienna.

Oil Creek Railroad.

The Oil Creek Railroad has been completed. It runs from Corry to Titusville, a distance of twenty seven miles. At Corry it connects with the Philadelphia and Erie Railroad, for Erie and the West, and also with the Atlantic and Great Western Railroad, and thence by the Erie Road to New York direct. By means of this road the great oil regions can be reached without difficulty. The road was projected and determined on by the owners of the oil wells, about the middle of the Spring of this year. The capital was at once subscribed, and the work was commenced in May, and by the 1st of the present month the road, twenty-seven miles long, was completed and turned over to the proprietors.

Amalgamation.

It is stated that the Erie Co. have purchased the Atlantic and Great Western (broad gauge) Railroad, and leased the Cleveland and Mahoning Road, which connects with the A. and G. W. at Warren. A new rail—broad gauge—is to be laid down on the C. and M. line, and upon the completion of the second division of the former, trains will run direct from Cleveland to New York. The first section of the Atlantic and Great Western Road is now in good running order, and at an early day the entire line will be in operation.

We consider this reported arrangement as one of the best possible for both these companies, the Erie and Great Western. The former may now calculate on having a great part of the trade of Ohio by the connection made with the Great Western, and we do not see how it can avoid being one of the best railway properties in the World. The line has actually been opened to Meadville Crawford Co., Pa. being a section of about 160 miles.

Salem, New Jersey, Railroad.

The Salem Railroad, of New Jersey, is so far completed that the cars are expected to commence running to the Woodstown station on the 19th of this month. Woodstown, by this arrangement, will be placed within about two hours' and Salem three hours' distance of Philadelphia. By the close of navigation it is expected the road will be completed and the cars running to Salem.

Tax on Business Firms.

The commissioner of internal revenue has decided that a firm doing business in different places must take license for each place where the business is carried on.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,

HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in ums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

OFFICE OF THE NEW YORK CENTRAL RAILROAD CO., ALBANY, November 1, 1862.

THE annual election for Directors of this Company, and for three Inspectors of the next Election, will be held at the Office of the Company, in the city of Albany, on the second Wednesday (the tenth,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

ROBERT L. BANKS,
5t45 *Secretary.*

Union Pacific Railroad Co.

OPENING OF BOOKS OF SUBSCRIPTION.

BOOKS OF SUBSCRIPTION TO THE CAPITAL Stock of the Union Pacific Railroad Company will be opened on WEDNESDAY, the 5th day of November, A. D. 1862, at noon, on the terms and conditions therein set forth, at the places and with the persons following, at their respective places of business:

Albany,	New York,	Thomas W. Olcott.
Baltimore,	Maryland,	Thomas Swan.
Buffalo,	New York,	Dean Richmond.
Boston,	Massachusetts,	Samuel T. Dana.
Burlington,	Iowa,	Lyman Cook.
Cincinnati,	Ohio,	S. S. L'Hommedieu.
Columbus,	Ohio,	William Denison.
Chicago,	Illinois.	William B. Ogden.
Cleveland,	Ohio,	Amasa Stone.
Concord,	New Hampshire,	Joseph A. Gilmore.
Carson City,	Nevada Territory,	Wells, Fargo & Co.
Detroit,	Michigan,	Chas. A. Trowbridge.
Dubuque,	Iowa,	Platt Smith.
Denver City,	Colorado,	George W. Clayton.
Hartford,	Connecticut,	G. P. Bissell & Co.
Indianapolis,	Indiana,	James M. Ray.
Louisville,	Kentucky,	James Guthrie.
Leavenworth,	Kansas,	Gen. J. C. Stone.
Milwaukee,	Wisconsin,	Ed. D. Holton.
New York City,	New York,	Henry V. Poor, Office of Secretary.
Omaha,	Nebraska Territory,	Alvin Saunders.
Portland,	Maine,	Charles E. Barrett.
Portland,	Oregon,	Wells, Fargo & Co.
Providence,	Rhode Island,	Walter S. Burgess.
Philadelphia,	Pennsylvania,	Jay, Cooke & Co.
Pittsburg,	Pennsylvania,	Thomas M. Howe.
Rutland,	Vermont,	Henry H. Baxter.
St. Louis,	Missouri,	Wm. M. McPherson.
St. Paul,	Minnesota,	Parker Paine.
Salt Lake City,	Utah,	Brigham Young.
San Francisco,	California,	Wells, Fargo & Co.
Trenton,	New Jersey,	Philemon Dickerson.
Wilmington,	Delaware,	R. R. Robinson & Co.
Wheeling,	Virginia,	S. Brady.
Washington City,	District Columbia,	R. W. Latham.

Said books of subscription will remain open on the terms aforesaid for at least two weeks from and after noon of said 5th day of November, at the places and with the persons above set forth.

By order of the Board of Commissioners of the Union Pacific Railroad Company. OFFICE OF THE SECRETARY, **54 William st.**

WILLIAM B. OGDEN, President.
HENRY V. POOR, Secretary.
THOMAS W. OLCOTT, Treasurer.

Dated at New York, this 25th day of October, 1862.

Semi-Steel Locomotive Tires, Fire-box & Tube Sheets,
AND BOILER PLATES.

TIRES—ROLLED, BLOCKED AND WELDED TO FIT ANY GIVEN DIAMETER OF CENTRE
PLATES—ROLLED AND CUT TO ANY PATTERN AND SIZE ORDERED.
ROLLED AND HAMMERED BARS, AXLES AND FORGINGS OF SAME METAL.

BOUGHT AND SOLD.

Engineer's Tracing Linen.

THE attention of Engineers, Architects and others is called to the **Celebrated Crystalline Tracing Linen** (new kind). The above superior article is for sale, in rolls of 24 yards, and 34 inches wide, by

SIBELL & SALISBURY,
7 Nassau St.,
(NEAR WALL ST.,)
6m44 **NEW YORK.**

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 362, Post Office, New York.** 38tf

OTTO AHLSTROM,
MANUFACTURER OF THE
LOUDON & AHLSTROM'S
PATENT EXPANSION SCREW FASTENINGS,

A QUICK and sure means of making preparatory Fastenings —The hole not requiring to be large at the bottom.

Also for ANCHORING LIGHT-HOUSES, BEACONS, BUOYS, BRIDGES, DAMS, FORTIFICATIONS, etc.

For NEWEL, GATE AND FENCE POSTS, and IRON RAILINGS in various ways.

Also, a CHEAP and ready means for fastening Iron or other ornaments (large or small) to stone or brick buildings.

For STAPLES, HINGES, AWNINGS, SIGNS, SHUTTER FASTENERS, LEADER HOOKS, etc.

For INSIDE WORK, such as for fastening articles to Hard Walls, Marble, etc., without hammering or using lead. For fastening Marble Tops to Furniture, etc. They are also so constructed as to be applied in Wood.

For LIFTING PURPOSES, such as Foundrymen's Tools for raising their patterns of wood or metal from the sand. They may be used in tapped or smooth holes.

Orders promptly executed by

OTTO AHLSTROM,
22nd St., 2nd Avenue, N. Y.

FOX LATHES.
F. W. BACON & CO.,
No. 23 PLATT, corner of GOLD ST.,
NEW YORK,

RESPECTFULLY ask attention to their stock of Machinists' and Brassfinishers' tools from the establishment of Messrs. GEO. H. FOX & Co., of Boston.

Nason's Patent Screw Chasing Lathe manufactured solely by the above firm is without a rival or substitute for the manufacture of Cocks, Valves, Hose Couplings, Steam and Gas Fittings, and general Brass Finishing.

They have and are constantly receiving from the same celebrated manufacturers, Chucks, and Slide Rests, Shafting, Pullies, Hangers, etc.

The Hangers manufactured by them are of the most approved kind. The bearing being suspended by a universal joint; its advantages over the rigid Hanger will be at once seen and appreciated by any mechanic. It is every way calculated for economy, being fitted with a patent box, which adjusts itself to the shaft, and they guarantee it to run SIX MONTHS WITHOUT REOILING, thereby saving labor, friction, oil, and the disagreeable and sometimes destructive effects of the dripping of oil from above.

ELEVATORS

For warehouses, manufactories, hotels, mechanics' shops, stores, or any other use where power Elevators are required; they guarantee all the safety that can be combined in any machine that is made. They are arranged with an improved apparatus, to hold the load in case the rope parts, which is uncertain; also an invention of their own, to automatically arrest the descent of the load, if by any cause it should move downwards beyond the prescribed speed.

They also manufacture and are the exclusive licensees of Otis Taft's Patent Elevator. The distinctive features are: the winding drum is driven by an endless screw—two or more ropes are used instead of one, thereby insuring more than double the safety—a peculiar mode of shipping the driving belts, which insures it to stop at the required point. It operates without noise or jarring.

Belting, Belt Lacing, and Picket's Patent Belt Fastenings kept on hand and furnished to order. Steam and Water Gauges, Gauge Cocks, Packard's Patent Ratchet Drills.

ALL DESCRIPTIONS OF MILL WORK MADE TO ORDER.

BABBITT METAL.

Parties wanting Shafting, Elevators, or any other machinery, will be waited on by an experienced Engineer, their premises surveyed, plans and estimates made, machinery located, and the erection superintended when desired.

Having made this branch of Engineering a SPECIALITY the past ten years with uniform success, they confidently offer their services to those requiring such aid.

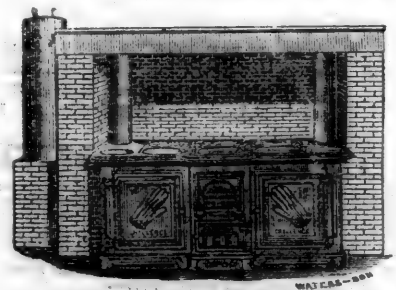
CUMBERLAND COAL.

THE BORDEN MINING COMPANY



ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.
3m21 **Nos. 70 and 71 West st., New York.**

Challenge Air-tight KITCHEN RANGES,

May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light

SUMMER AND WINTER

PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical in fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

SANFORD'S

MAMMOTH OR GLOBE HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

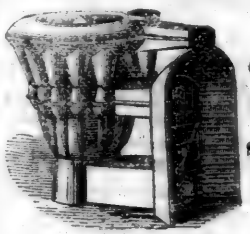
J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York,

The COSMOPOLITE PARLOR RADIATOR, & GAS BURNER,



Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

IMPORTANT

TO

RAILROAD COMPANIES.

THE ATTENTION OF

RAILROAD MANAGERS

Is called especially to the Machines manufactured especially for the use of Railroad Companies by the proprietors of the

ALBANY AGRICULTURAL WORKS,

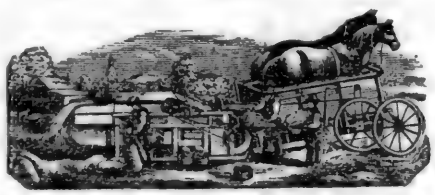
CONSISTING OF

EMERY'S PATENT

Railway Horse Power,

Made changeable for both right and left hand work, also with changeable degrees of forces and motions of the driving Pullies without changing the Speed and Labor of the Horses, thereby adapting them to the different uses required, as Sawing Wood, Pumping Water, Driving Elevators and Machine Shops, Foundries, etc. The Power is also adjustable to any degree of wear or use, so as to always insure its working with its greatest efficiency. All the running chains in these Powers are made of the best MALLEABLE IRON which gives to them triple the strength and durability of Grey Iron which last is universally used by all other Railway Horse Power Manufacturers—thereby at the same time lessening the weight of these several hundred pounds, making them less cumbrous for handling and transportation.

WOOD SAWING MILLS.



These Sawing Mills are made upon the most approved and convenient plans in use. Having a heavy plate fly-wheel fixed to the Mandrill with a Ratchet or catch pulley for the driving band on the outside of the fly-wheel—the journal bearings are fitted with Babbet Metal—the wood carriage traverses on iron ways and gibbs—a 24 or 26 inch Saw is fitted, filed and set in working order and the plates warranted. When desired, a 14 inch saw is fitted, also a table for the purpose of slitting boards, etc., for fencing and carpenter work.

The whole together forming one of the most complete and desirable sets of machines for their purposes. They are already in very general use on nearly all the principal Railroads in this country.

PRICE,	ONE HORSE POWER	$90.00
"	TWO " "	120.00
"	SAW MILL, 24 in. Saw	37.00
	SETT BANDS and EXTRAS	5.00

PUMPING ENGINES

Of different kinds for Raising Water for Railroad tanks and other purposes, can be furnished on demand with Reciprocating or Rotary Pumps—fitted to be operated by these Horse Power and the best adapted for Railroad and Mining purposes. One of the SEVENTY-FIVE DOLLAR PUMPING ENGINES when driven by the TWO HORSE POWER has a capacity equal to any Four or Five Horse Power Steam Engine and Pumping Machine for the same purposes.

THRESHING MACHINES

Of the most approved kinds, for one and two horses and with simply Separators, or with Complete Cleaners which fit the grain for market in one and the same operations. And of the most approved construction.

They are very extensively introduced into all the grain-growing sections of this country and the world. They are especially adapted to the force of the above Horse Powers and can be driven by Steam or Water power with equal advantage. They will be furnished on the most liberal terms and warranty.

Liberal discounts made to RAILROAD COMPANIES from the above prices, and agents solicited for the sale of their manufactures.

For further particulars see the new Illustrated and Price Catalogue of the ALBANY AGRICULTURAL WORKS, furnished gratis on application to the proprietors.

American Railroad Journal.

New York, Saturday, November 15, 1862.

Pacific Railroad.

We had the pleasure, on Thursday last, of meeting W. E. HARVEY, Esq., Auditor of Nebraska, on his return from Washington, a gentleman who represented that State in the Railroad Convention at Chicago in September last. He confirms the opinion which we have frequently expressed in this JOURNAL, that a great portion of this road may be substantially constructed for $16,000 per mile, beginning at the 100th parallel and continuing along the south side of the Platte for more than three hundred miles. And as a proof of his sincerity, he is willing to contract at that rate for the first forty miles. Mr. Harvey is one of our most skilful engineers, and has had great experience in his profession.

☞ The present high price of coal is attracting considerable attention to the necessity of increased supplies. Capitalists and men of enterprise are offered a good opportunity to go into the business by the Catawissa Railroad Company, which advertises in another column for proposals to lease their mammoth vein 47 feet thick, and one of 7 feet, and one of 5 feet, recently opened and proved to be of the best quality.

☞ Mr. A. H. NICOLAY, the well known broker, No. 52 William st., offers his services in buying and selling stocks and bonds. His well known experience makes him an efficient agent for the transaction of this kind of business.

Explosibility of Mineral Oils.

The falling off in the supply of whale oil the last few years, has been most remarkably compensated by the discovery of the oil wells of this country and Canada, a providential arrangement in the conduct of human affairs, which cannot but strike even the most careless and apathetic observer. The application of these oils to the purposes of illumination and the lubrication of machinery is becoming very general, and indeed an absolute necessity. For while cities and towns of population may be most cheaply and advantageously lighted by gas companies, yet in small villages, farm houses, detached residences, and on board ships, lamps and candles will continue to be indispensable. Petroleum comes then in good time to meet the wants of our rapidly increasing numbers.

Two objections have interfered with its popularity, and retarded its usefulness. The one is the disagreeable smell which accompanies the article in its natural state, and the other its explosive character, and its destructive force even at blood heat, Since the article has been adopted in Europe, and cargoes are continually exported from this country with a good profit, it has become an important consideration to overcome its dangerous tendencies, and to make it as safe an article to deal in as the ordinary oils of commerce. Particularly since some disastrous conflagrations have taken place, spontaneously it is believed from an exposure to the sun, and as in consequence, the Insurance offices have become alarmed at incurring risks which they did not contemplate. The subject has therefore been recently called up by these institutions for particular examination, and the Common Council of this city have undertaken an official inquiry, to see how far legislation is becoming necessary, to protect the public from the dangers of a conflagration arising from even the mere storage of the article. The examination of parties engaged in the trade have not been entirely satisfactory. Mere experience of the business is not enough to decide the questions proposed. We must look to scientific men, to those capable of a rigid system of analysis, and familiar with the natural combinations of elementary substances for the explanations we seek, and the precautions to be adopted, and here let us do justice to that useful painstaking, learned and philanthropic class, who are continually removing from our path, the obstacles which so often intervene between a good idea and the carrying of it out. There are too many who devote themselves to the pursuit of business, merely for selfish purposes, indifferent to every principle in the world unless it ends in success, while others trim the midnight lamp to discover for others the means of that success, or to explain the causes of failure, and on the other hand to arm industry and perseverance with the means of their triumph.

In the present case we are therefore greatly indebted to the skillful labors of Mr. T. Allen, of Providence, Rhode Island, for an elaborate report on the subject, made at the request of the Mutual Fire Insurance Company of that State, and we think we cannot do a better or more timely service to our readers and the public, than by giving the substance of his conclusions, after very careful and prolonged experiments. He says, "All the liquid products of the distillation of coal are popularly considered as "coal oils." but there is an extraordinary difference in their volatility and inflammability, from the explosive flash of volatile spirits resembling ether and alcohol, to the dull heavy blaze of smoking tar. The natural petroleum so nearly resembles the artificial tarry oil obtained by the bituminous coal, that the same name will be applied to designate the results of the distillation of the same material. Both the natural and artificial petroleum in the crude state of this tarry oil, are found unfit to be burned in lamps. After numerous attempts to refine the crude petroleum by a second process of distillation, three remarkably different products were separately obtained. Each one of these three different substances having a different evaporative or boiling point like water and alcohol, they are readily separable during one continual process of distillation, by gradually increasing the heat beneath the still.

The first product that comes over from the condenser is the volatile spirit resembling ether and alcohol, called naptha, benzole, benzine, &c., which boil at a lower temperature than alcohol. (about 150° to 160° Fahrenheit.) Naptha evaporates as rapidly as ether, producing similar lethean effects on breathing the vapor, and even exceeds ether and alcohol in inflammability. It appears to be

the common practice of distillers of petroleum or coal tar, to keep the heat beneath the stills very low, until this naptha has time to become evaporated at its boiling point of 160°, and to flow from the condenser in a chrystalline stream into a cistern arranged to receive it. When by the test of a hydrometer its specific gravity is found to become increased to a certain degree by containing some of the heavier coal oil, the stream from the condenser is directed into another cistern, designed for receiving the second product of the distillation, being a heavier coal oil, commonly known as "kerosene."

The exact point where the naptha becomes exhausted, and the kerosene begins to flow is a nice question to be decided upon by the distiller. The extreme inflammability of naptha renders it unsafe for burning in lamps, and it cannot be advantageously reduced to vapor to be mixed with coal gas, because it does not form a permanent gas; for the vapor like that of alcohol, becomes condensed into a liquid when ever it is cooled as occurs in its passage through cold iron gas pipes under ground. The only available use of Naptha is for dissolving India rubber and for mixing with painter's oil as a substitute for the spirits of turpentine. For these reasons Naptha is nearly worthless for sale in the market; and as it constitutes 10 or 15 per cent. of the petroleum used for distillation, there is a strong temptation for the distillers to divert the current of naptha into the kerosene oil cistern to gratify the cupidity of purchasers, by thus affording oil at a low price. Thus both buyers and sellers, are alike tempted to disregard the danger resulting from mixing the naptha with the kerosene oil.

To gratify purchasers of coal oil by an extraordinary low price, it has been stated that dealers have contracted for the waste naptha, and residuary heavy coal oil or tar for preparing a mixture of about the same specific gravity as kerosene oil and resembling it in appearance. The hydrometer is not therefore available for detecting this spurious article and there remains no other mode of ascertaining its dangerous character, than by actually testing its inflammability experimentally by the degree of heat indicated by a thermometer, at which it will become kindled by the application of a lighted match, and begin to exhibit a lambent flame flickering over its surface as over that of blazing alcohol. (It would seem from this that Mr. Tagliabue's instrument exhibited before the Common Council Committee last week, is of but little value.)

If the simple oil contains much naptha, it will be found capable of emitting sufficient gaseous vapor to take fire at the ordinary temperature of the air on plunging a burning match in a cup of the oil. Other samples will require to be heated to 90° and even 160° before they can be similarly kindled. There is all this difference in the inflammability of the article sold in the market for coal oil. Judging of all the qualities of coal oil by some few cases, of the explosive inflammability of the lowest grade in the market, they have all been subjected alike to doubts and suspicions. As the coal oils offered for sale by establishments of known respectability, are really most valuable and economical substitutes for whale oil purposes of illumination, it is unwise as well as unprofitable to embrace them all in one sweeping clause of condemnation, without experimented examinations to determine the facts in relation to this novel subject of inquiry."

As the presence of naptha in kerosene oil essentially contributes to the brilliancy of the light, and tends also to diminish the quantity of smoke, Mr. Allen considers that it is important to retain as much of this volatile spirit as is safe and practicable, and he expects that by some new chemical discovery its violent explosive nature may yet be tamed down to usefulness with safety. To test the inflammability of the various kinds of kerosene oil manufactured in this country, he proceeded to perform some simple but very decisive experiments. This was done by pouring samples of each into cups, and placing them afloat in a basin of water heated by a spirit lamp, with a thermometer immersed in the water, to indicate the increase of temperature from 60° to 212°.

As the temperature increased, blazing matches were passed over each of the cups, at short intervals, until the increased heat caused sufficient gaseous vapors to arise from each to take fire, which they all did at degrees varying from 80° to 162°, exhibiting faint flames quivering over the surface of the oil, precisely like those, hovering over the surface of the spirits of wine or alcohol when similarly kindled. The flames are quite as readily extinguished by a blast of the breath, and not the least symptom of any explosive character became manifest when each one took fire. Until the evaporation point of each sample of oil was produced by the increase of heat applied, and until lambent flames were kindled, burning matches were extinguished when plunged into the coal oil as effectually as if they had been similarly plunged into water. The average heat at which all the samples emitted sufficient vapor to admit of being kindled, was about 125° of Fahrenheit.'

The next interesting point of inquiry was to ascertain the heat to which coal oil is ordinarily elevated when burning in lamps. The results showed, that in glass lamps the temperature is increased about 6°; in metallic lamps about 10° or 12°, above that of the apartment in which they were experimented upon, and that being 67°, produced a heat in the oil of from 71° to 79° leaving a considerable range of temperature above 125°, the average range of combustibility before found in the experiment with the samples in the cups.

This deduction followed.

"Finding by actual observation that only the gaseous vapors arising from the heated oil, exhibit the phenomenon of flame whilst ascending, and combining chemically with the oxygen of the air, it became manifest, that no explosive action could be anticipated to take place from any kind of oil or inflammable spirits, until these gaseous vapors were first evolved by a previous increase of temperature, and then brought into contact with the atmosphere before applying a match thereto. There being no room left for either the gaseous vapor of the oil, or for atmospheric air to combine therewith, in the chamber of any lamp *entirely filled with oil*, every attempt to produce explosive action with a full lamp, utterly failed when lighted matches were applied to the open orifice of the lamp. The only result produced by increasing the heat of the coal oil, was an increase of the evaporation of the gas and a higher jet of flame steadily rising as from the jet of a gas burner. *So long as lamps are kept full of oil, or even of explosive camphene and "burning fluid," there can be no explosive action whatever.* ("On this principle we suggest that is practicable to invent a lamp, the globe or chamber of which shall always be kept full automatically.")

Mr. Allen proceeded to experiment in this direction and found that when the coal oil was heated to 160°, the rising gaseous vapor filled the room, and extinguished all the matches which were lighted as a test, but produced no explosion, as the atmospheric air had been in the process of evaporation nearly if not quite expelled. On the other hand he found that if one measure of carbonated hydrogen, be thoroughly mixed with four or five of atmospheric air, and brought in contact, a violent explosion takes place. "In order therefore to produce the explosion of a lamp or any other vessel it is only necessary to mix the gases of decomposed oil, or even wood with this combining portion of atmospheric air and then apply a lighted match." The bursting forth of flames in common stoves, coal and air tight, is caused by similar means.

The inflammable nature of naptha was also ascertained by a course of experiments. It was found that under the ordinary atmospheric temperature, and even when cooled down to the zero of Fahrenheit, it blazed with violence. It would continue to blaze in spite of water thrown upon it, or snow, or even ice, even when the surrounding air was 19° below the freezing point.

It is this vapor then which insidiously produces all the mischief. In a cellar, when stored in barrels with the bungs left out, it creates so much vapor that the introduction of a lighted candle will explode it like gun powder. Petroleum contains a considerable per centage of this, and as long as it remains there, is a dangerous constituent.

We arrive at this conclusion, that petroleum must be completely deprived of its naptha to ensure safety in its use, and that careful distillation is necessary to procure a good article under any circumstances. Also that at ordinary temperatures, the article so manufactured may be safely stored, and insured at reasonable rates as well as whale oil.

Vermont and Canada Railroad Company.

The annual meeting of the Stockholders in the Vermont and Canada Railroad Company was held at Northfield, Vt., on the 6th inst. Full and highly satisfactory reports were made by the Directors, and the Trustees and Managers, which are to be printed.

The net earnings of the roads for the year ending June 30, 1861, was....	$224,050 14
And the net earnings of the Roads for the next eleven months after was..	191,465 43
To which, adding one month more at pro rata, would make the net earnings the past year.....	208,871 38
The earnings of the Roads the first four months of the current year have been.....	318,171 52
For the corresponding months of last year the earnings were.....	265,312 10
Showing a net gain in four months of.	52,809 42

Negotiations have been completed for Western freights, and arrangements made with the Managers of the Grand Trunk Railroad connecting that road with the dock at Prescott, opposite Ogdensburg, and also with the depots at Ogdens-

burg, by a steam ferry-boat; and the line is now prepared to transport freight between Boston and Chicago. Other important connections are in progress of completion. The following named gentlemen were elected Directors for the ensuing year:

Lucius B. Peck, Edw. Mott Robinson, Edw. Blake, John Porter, W. C. Smith, J. P. Clark, Benjamin P. Cheney.

Elmira and Williamsport Railroad.

The Elmira and Williamsport Railroad Company is the successor of the Williamsport and Elmira Railroad Company. The latter company was chartered in Pennsylvania in June, 1832, with authority to construct a railroad commencing at Williamsport, Pa., and running thence by the way of Lycoming Creek to the north line of the State, in the direction of Elmira, N. Y. The work of construction was commenced in 1834, and completed to Ralston, 25 miles, in 1838. The road was operated for some years without profit. In 1849 it was sold on behalf of its creditors, and a new company organised, which resumed the construction of the road northward, and completed the same to Elmira on the 9th of Sept., 1854. The whole length of the road is 78 miles, of which about 10 miles are in the State of New York. The chartered rights of the company in the latter State were derived from an act of the Legislature passed in 1850. The share capital authorized and paid in was $1,500,000, in 30,000 shares of $50 each.

At the date of the last annual report of the old company, March 31, 1859, the funded debt was $2,361,972, viz: 1st mortgage 7 per cent coupon bonds, $1,000,000, dated July 1, 1851, and payable July 1, 1861; 2d mortgage 7 per cent coupon bonds $700,000, dated May 31, 1854, and payable April 1, 1879; Chattel mortgage 10 per cent bonds, $495,000, dated March 31, 1857, and payable April 1, 1887; 10 per cent bonds, $11,000-1st mortgage scrip $60,715; 2d do., $45,805; Chattle do., $49,452. In addition to which there were: bills payable, $161,272; due bills for labor, $17,573; loans, $78,246; pay rolls and vouchers, $21,945; and debts due by the company, $7,912—making the aggregate of indebtedness $4,148,920. Offset by cost of road and equipment $4,031,581; discount on sale of bonds, $5,361; materials, office furniture, telegraph, etc., $31,317; stocks and bonds on hand, $41,615; debts due the company, $32,552; freight and toll bills due, $3,981; cash, $2,513.

The earnings of the road in that year were: from passengers, $61,788; freight, $112,741; mails, $17,441; repairs for other companies, $3,885—total $195,855. The disbursements were: operating expenses and repairs, $95,662; coupons, $50,472; interest, $12,599; salaries, office expenses, insurance, etc., $11,244—balance to credit of construction account $25,878.

No report was issued for the year ending March 31, 1860. The earnings of the road during that period were $201,651 72.

For the ten months ending March 31, 1860, the gross earnings were $166,895 70; the expenses, $127,622 90; and the net earnings $39,272 80.

Since the date of the report of 1859, the affairs of the company have been re-organized. In consequence of default in the payment of interest, proceedings were instituted for the foreclosure of the mortgages, which resulted in a decree, dated February 29, 1860, for the sale of the road. The sale was subsequently made with the consent of the various parties in interest, who had previously agreed upon a plan of reorganization, based on a capital of $2,000,000, as follows:

New mortgage, 7 per cent bonds (in exchange for old bonds,) dated May 1, 1860, and payable, principal January 1, 1880, and coupons semi-annually Jan. 1, and July 1		$1,000,000
Preferred 7 per cent stock issued—		
1st. For confidential debt	$150,000	
2d. For 2d mort. bonds (one half)	350,000	
		500,000
Common stock issued—		
1st. For unsecured debt	$100,000	
2d. For old stock (one-fifth)	300,000	
3d. For mortgage coupons	100,000	
		500,000
		$2,000,000

The Chattel mortgage was satisfied by an agreement to surrender the equipment to the company, and receive therefor the sum of $20,000 annually, to be increased to $30,000 when the revenues of the road would allow it.

The first report issued by the managers of the Elmira and Williamsport Railroad Company is for a period of ten months commencing June 1, 1860, and ending March 31, 1861. The result of the company's business during that time was as follows:

Gross income from freight		$94,971 32
" " coal transp.		39,275 43
" " passengers		52,178 16
" " mails, etc.		21,325 97
		$207,750 88
Ordinary expenses	$118,890 45	
Extraordinary "	12,000 00

Still to be deposited on these accounts to April 1		1,773 27
Interest on mortgage on real estate		1,750 00
Interest on scrip for confidential debt		2,133 67
Interest account of 1860–'61		1,078 56
Balance applied to reduction of debt		23,998 20
		$76,860 43

The indebtedness above alluded to consisted in the first place of the expenses of foreclosure entailed on the new corporation by the order of the court, including trustees and counsel fees, receiver's charges, and all prior liens or incumbrances subject to which the road was sold under the first mortgage; secondly, of certain obligations for labor and materials, and other pressing claims against the old company, assumed by this corporation on its re-construction; thirdly, the standing amount of indebtedness along the line of the road, transferred from the receiver's accounts to those of the company. These various charges amounted in the aggregate to $151,641 48, the payments of which were distributed over the five years following the date of the agreement for the reorganization of the company, excepting $27,778 94, payable before a dividend on the preferred stock.

The general statement of the company April 1, 1861, was as follows:

Construction account		$2,136,036 88
Elmira basin		50,000 00
Cash and cash items		6,824 62
Freight and toll bills due		2,269 10

		$2,214,873 40

* Since the date of this report, this item has been reduced to $25,000 and will be all retired by the close of the present fiscal year.

The Directors finding that the net receipts of the year were encouraging, expended very judiciously a large portion of this surplus in valuable improvements on the road, as being conducive to the future interests of the stockholders. Thus they have substituted very judiciously oak and chestnut cross ties, in place of the hemlock sills originally used in the construction of the road, thus cutting off a continual source of annoyance and expense. The important bridges of the road have been mostly rebuilt, and all the sound timber left in the old work, used in repairing the small bridges and cattle guards; the interest on the mortgage bonds has been promptly paid, also that on the Elmira basin. This proves to be a most valuable property of fifty five acres, and 1500 eet of canal wharfage, completely arranged with racks, trestle works, shutes for dumping coal, both into the boats of the Chemung Canal which distributes the mineral for hundred of miles North and East on the Erie Canal and the lakes, but also into the cars of the Buffalo and Canadaigua Railroads, which also convey it away in enormous quantities. The Company also has a reciprocal arrangement with the Erie Railroad, in regard to their facilities at this point, the free use of a mile of the track of the latter from their station to the junction in the town of Southport, and of the bridge over the Chemung river at Elmira.

The sum of $53,429,53 has been applied to the payment and discharge of the old indebtedness, assumed by the new company. Should the business of the road show no change in the next two years, the net income at present rate of receipts will suffice to discharge by July 31, 1863 the balance of the scrip, labor and material debt, the cost of tools, and yet leave enough to pay a dividend to the preferred stockholders. The Directors very justly believe therefore, that their old difficulties are practically overcome, and that the prospect of early remuneration to the stockholders is a bright one. This prospect is founded on the significant fact that a new link in the railway line, has been established between Buffalo and Corning, a point seventeen miles West of Elmira on the Erie Road, and by arrangement with the latter, and thus the intermediate distance is overcome by the actual running of the Buffalo and Corning cars into Elmira "which was not so before," at least since the old connexions by the Elmira and Canandaigua, and the Canandaigua and Niagara Falls roads were broken up by the failures of these companies. [The latter we happened to notice in perfect state of dilapidation during a recent visit to Niagara Falls.]

Thus the Elmira and Williamsport now connects with Buffalo, Rochester and the North West, and with the South East by the completion of the Northern Central of Pennsylvania which gives a direct route to Washington City from Buffalo, two hundred miles shorter than by the way of New York, an advantage that has been seized upon by the Government for the economical transportation of its western troops to the seat of war. The distance between Buffalo and Washington by this route is but twenty-four hours.

So too the opening of the Lebanon Valley Road gives another connection with Philadelphia by the Reading road, and with New York by the completion of the Lackawanna and Bloomsburg road to the Northern Central at Northumberland, thus opening also Danville and Rupert, and the Wyoming and Wilkesbarre districts, all excellent feeders.

Yet there is still further advantage in prospect, from the lease of the Philadelphia and Erie by the Pennsylvania Railroad Company, and the consequent control of the link from Sunbury to Williamsport, thus forming a close alliance with the Elmira and Williamsport, and securing for Philadelphia the transit in that direction, of a large portion of the Canadian and lake trade, and a fair competition with New York for their products.

Still further by the opening of the Tyrone and Lock Haven road, also controlled by the Pennsylvania Railroad Company, the coal regions of Clinton and Centre Counties, will be able to furnish inexhaustible supplies of the finest bituminous coal to the cities of New York and Philadelphia, at very reduced cost. As it is, the coal trade over this road has largely increased the present year. The settlement and clearing of the lands adjacent to the line of the road especially in the valley of Lycoming are rapidly going on, iron works are being put in operation, grain is beginning to be raised in considerable quantities along the line, and the whole face of the country is rapidly improving. We do not know when we have read a report so entirely satisfactory as this of the 2nd year (1862) and we do not doubt but that with Thos. Kimber Jr., as President, H. A. Fonda Superintendent, and the efficient board of managers consisting of the Messrs Lewis, Farnum, Mercer, Randolph and Diven, the Elmira and Williamsport Railroad will be a first class property, and deservedly so.

Employment of Stages by Railroad Companies to run to and from Stations.

WHEN THESE CONTRACTS ARE LAWFUL. LIABILITY OF A COMPANY TO A PASSENGER INJURED WHILE RIDING IN ITS STAGE. SUCH CONTRACTS ARE NOT ULTRA VIRES.

The action was brought by one Buffit against the Troy and Boston Railroad Company, to recover damages for injuries sustained by him by the overturning of a stage sleigh employed by that company for the purpose of conveying passengers to and fro between the village of Schaghticoke Point, and the Schaghticoke station on the defendant's railroad, distant about a mile from the village, and was brought to trial at the Rensselaer circuit, of the N. Y. Supreme Court, in May 1860.

It appeared that the railroad passes about a mile from the village of Schaghticoke Point, at what is called Schaghticoke station. Passengers on the defendant's railroad, going to and from the village of Schaghticoke Point, had, ever since the opening of the road been conveyed in omnibuses, stage-wagons or sleighs, which, in going to the trains, ordinarily started from the upper end of the village and passed down through the main street, stopping along for passengers. The conveyances used for this purpose were furnished by one John Downs, who was, together with his conveyances, horses and servants, hired by the defendant, at a daily compensation to carry passengers between the village and the station, and said Downs was in the defendant's employ for that purpose at the time of the occurrence out of which this action arose. The plaintiff took passage at the lower end of the village of Schaghticoke Point on the stage sleigh, then driven by one of Downs' men, for the purpose of coming to Troy by the defendant's railroad. As the sleigh stopped the driver told the plaintiff that it was full inside, and he then got on the outside. The defendant had no ticket-office at the village of Schaghticoke Point, but Downs sold tickets. Passengers generally purchased their tickets of Downs after reaching the depot, but sometimes at the village. The plaintiff had not purchased one on this occasion. Between the village and the depot the sleigh was overturned, and the plaintiff received the injuries for which the action was brought.

The jury rendered a verdict in favor of the plaintiff for $450 damages, and the defendant then appealed to a general term of the Supreme Court which now affirmed the judgment of the court below, and held the contract made by the defendant with Downs to be a lawful one, and that the company was liable in damages for the plaintiff's injuries. The following is a part of the opinion rendered by the court at the decision of the case.

HOGEBOOM J.—Two questions are made in this case. First; was the plaintiff a passenger with the defendant, and, second, was the contract for carrying by stage a lawful one.

As to the first question, the proof was sufficient to go to the jury, and it was submitted to them with instructions that the plaintiff held the affirmative. The stage was run in connection with the railroad, and so far as it appears, for no other purpose. The presumption is, that the plaintiff entered the stage intending to take passage by rail. The proof is express that such was his intent. These facts made a legitimate case for the jury, and the question being fairly submitted to them, their verdict on this point should not be disturbed.

Second, was the business of the defendant in running the stage in connection with its railroad, *unlawful*, and the contract to convey the plaintiff by stage *ultra vires?*

It must be conceded that the right to run a stage was not one of the *express* powers granted by the charter; nor perhaps an *implied* power *indispensably* necessary to carry into effect the *express* powers. But it was nevertheless a power convenient and proper for the successful transaction of the business of the defendant, promotive of the objects of the corporation, and conducive, at least not injurious—to the interests of the public. It appears to have been exercised in strict subordination to the principle objects of the incorporation, to wit, the transportation of passengers and freight by rail, with safety, convenience and dispatch. It was not made an independent business carried on for the purpose of speculation, nor with a view to compete with rival conveyances from the village by stage, but strictly incidental to railroad operations, and confined to the immediate neighborhood of the depot. In itself the business was not unlawful nor a prohibited one; nor was it to the limited extent it was carried on, against public policy. Under these circumstances can it be said to be unlawful, or beyond the just powers of the corporation, fairly and reasonably construed? If so, then any conveyance of passengers by stage between the termini of different railroads in a city, or between disconnected por-

tions of the same railroad, disconnected by accident or design, permanently or temporarily, is illegal if carried on by the railroad company. And any conveyance of passengers by the railroad, if it happens to traverse in any portion of its route, land not expressly dedicated to the railroad company, or the title to which has not been legally acquired, is also illegal. I am inclined to think that as the business, irrespective of the charter was lawful in itself, plainly promotive of the objects of the incorporation, not pushed beyond a needed accommodation to the immediate neighborhood, and not violative of any principle of public policy, the business was lawful.

It seems also to be settled by judicial decisions, at least so far as this court is concerned, that such a contract is lawful, and that the defendant is estopped to deny its validity. (*The judge here comments upon the following cases. Hart vs. the Rensselaer and Saratoga R. R. Co., Cary vs. Cleveland and Toledo R. R. Co., Bissell vs. The Michigan, Southern and Northern Indiana R. R. Co., and Parish vs. Wheeler.*) The contracts in all of these cases seem to me to be as much *ultra vires* (if so at all) as in the case at bar. They had strictly no power to contract for railroad operations, or railroad liability, beyond the bounds of their respective routes and States. It is true their business was in its nature a legitimate railroad business. But I have endeavored to show in a previous part of this opinion, that the business pursued by the defendant on this occasion was a legitimate railroad business—not done exclusively *on* its railroad, to be sure—but connected with it and appurtenant to it—incidental entirely to railroad transportation—done to advance that interest by concentrating travel and freight at the railroad station by other means and appliances, within a narrow circle of territory in the immediate neighborhood, and not designed to set up an independent and substantive business, competing with other interests, disconnected with and dissimilar to the legitimate railroad operations for which it was chartered.

But suppose the contract and business in question to be unlawful, in the sense that it exceeded the powers granted by its charter, is the defendant released from liability? On this subject several considerations seem to me to be worthy of notice, and to possess considerable force.

First; the defendant had long been engaged in this stage business—indeed, ever since it had existed as a corporation. This appears from the evidence. It must be *presumed* to have been known to the stockholders, who never in any way arrested it. Second; it must also be presumed, from the absence of evidence to the contrary, that the stockholders participated in the benefits of this arrangement, and thus approved and *adopted* the unauthorized acts of their directors and managers. In this particular instance they did the same thing as taking the money of the plaintiff and agreeing to transport him safely to Troy.

I incline to think—under the authorities before quoted and the general principles of law—that it is *estopped* from denying its liability for the acts of its agents, as much as a party would be who, knowing that a note was infected with usury, and therefore void, nevertheless represents it as valid business paper, on the faith of which representation it is taken. At all events receiving the plaintiff into its stage with its consent, it was under a duty to transport him with ordinary care, and it is responsible for a neglect of that duty.

This latter point was not presented at the trial, nor ruled by the court, and there is some doubt perhaps, whether it ought to be employed here to prevent a new trial, although I do not see why, if well taken, it will not be fatal to the defendant's case, if the weight of evidence on the question of negligence be conceded to be with the plaintiff. The essence of the charge was, that the defendant was liable for negligence in the conveyance of the plaintiff. I am prepared, however, if necessary to rest the affirmance of the judgment upon the grounds taken by the judge at the trial. Judgment affirmed.

The National Finances.

In a period of war, with enormous expenditures, every interest hinges upon the condition of the National Treasury. Such condition is taken as indicating that of the nation, as well as the cause in which it is engaged; for in modern times war is only a question of money, or resources. So long, consequently, as the Treasury is readily and easily filled, the public burdens cannot be oppressive, nor can any doubt be reasonably entertained as to the issue of the contest, unless in all respects the belligerents are equally matched.

So far the Government has had no difficulty on the score of money. It has had all it asked. We may not have approved of all the modes by which this has been provided, but the currency it has put afloat, has served, as far as its own expenditures have been concerned, all the purposes of gold and silver. The sources it has, so far, chiefly resorted to, are yet inexhausted. It has more than one hundred millions of demand notes left, while it has hardly begun to use the 5-20 year bonds, of which $500,000,000 were voted. In addition to these resources yet in hand, it has the new revenues provided by a sweeping system of internal taxation, which must, with the ordinary revenues, produce at least $250,000,000 annually.

From this statement it would seem that the condition of the National Treasury could be hardly more favorable. But we can well imagine that Mr. Chase should feel some apprehension at the continued issue of Demand Treasury notes. That those already issued have caused considerable inflation in prices, there can be no doubt. A further issue must necessarily add to the inflation. If, at the present time, with an issue of $200,000,000 of notes, 131 be the fair value of gold when paid for in paper, the price should advance to nearly 150, with the issue of an additional $100,000,000. With such issue, the result stated must be approximately approached. However different may have been the theories of Mr. Chase and his advisers, the law in such cases is unmistakable. Assuming the premise, the sequence is unavoidable.

The other source immediately available to the Treasury, (excepting a small amount of the 7 3-10ths,) the 5-20 year bonds mature too early to render them a desirable investment. People do not want to purchase a security which may be paid off in a few years *in kind*—in government paper. They want something payable in the golden era that is to follow the present one of paper. Hence the bonds last described will sell only sparingly, notwithstanding their high rate of interest which is payable in gold. They cannot be sold in sufficient quantities to meet the exigencies of the government.

Neither will the revenues from taxation come in as fast as wanted. The machinery which is to produce them is only now being put in motion, and several months must yet elapse before any considerable receipts can be expected from this quarter.

In such a dilemma the Department must continue to resort to its Treasury notes. It has nothing, at present, to supply the place of these. Necessity will force Mr. Chase to overcome his scruples against a further issue, from its tendency to put up the price of gold. He unquestionably begins to doubt the correctness of his views which led him to recommend the issue of demand notes to serve as currency, and to see that such notes are securities, not money. But it is now too late to retrace his steps. The depreciation is not yet excessive. To him the notes on hand are nearly of equal value with silver and gold. They pay the army and purchase whatever is necessary to its maintenance, and to the vigorous prosecution of the war; and, in the absence of other sources of income, must be used.

However much the Department may wish to change its financial policy, it cannot do so till new legislation is obtained of Congress. Such legislation will probably, as usual, be one of its last acts. Appropriation bills are seldom or never passed, except upon the heel of the session. But Congress will not be likely to act hastily, when such action is in direct conflict with its precedents. The Treasury Note bill was a favorite measure of both Houses, and self-respect, or love of consistency forbids the idea of the adoption, at an early day, of different policy and measures.

The extent of the depreciation of a paper currency, or appreciation in the price of gold, measures the degree of the impolicy of the acts that caused the two kinds of currencies to differ in value. We do not pretend to say what this difference is, or that that now existing is real or fictitious. Sufficient time may not have elapsed to determine their relative value. Whatever this may be, no time should be lost in reconciling them. It may be proper for Government to issue demand notes receivable in payment of taxes, as a part of the machinery for, and in anticipation of, their collection. Such issue may, unquestionably, be mutually advantageous to the Government and the people. But in case of such issue, means should always be provided for the retirement of whatever amount is in excess of the objects for which they are used. Such provision is the privilege of converting them into a long government bond, which may bear a very low rate of interest. A bond having 100 years to run, and bearing only 4½ per cent. interest, would immediately become a favorite subject for investment. Money is fast becoming as abundant in this country as in England, and on the best security, the rate named may be regarded a high one. All that Government has to do is to provide such bond. The larger the issue of Treasury notes, the more rapidly will they be converted, from the greater abundance of, and lower rates for money. With such provision for the retirement of demand notes, the amount afloat could hardly ever be in excess of the wants of the people, while those afloat could be retired in a similar manner, and so gradually as to cause the least possible amount of public distress.—*Hallett's Financial Circular.*

Saturday, November 15, 1862.

Stock and Money Market.

The condition of the money market is so intimately connected with the present civil war, that it is impossible for the most impartial or even the coolest and most calculating observer, at all interested in finance, to avoid alluding to the military and political state of the country. For, on the successful or unsuccessful termination of the present contest, will inevitably depend our financial future; and this necessarily affects the present, whether we like it or not. There may be great shrewdness in Wall street, but after all, its operations are regulated by the state of the country, whether they will or no. We may look at the Stock and Exchange Brokers as a body of great influence and sagacity, and such it undoubtedly is; but they are as much obliged to trim their *sales* according to the prevailing winds, as the bravest mariner that ever dared the ocean.

Thus, the sudden removal of GEN. MCCLELLAN, from the command of the army has had its effect on the money market the last few days. Wall street keeled over under the first gust, not down so far that the water came in at the scuppers, but almost. It is again on an even keel, but is deeply loaded, and the spray continually breaks over it.

We may say *en passant*, that the graceful, the charming manner in which MCCLELLAN left his command, and took leave of his army, his noble conduct to BURNSIDE, and the utter suppression on his own part of any sense of personal wrong, find their way directly to the heart; they remind us of the adieux made by NAPOLEON to his soldiers on bidding them farewell at Fontainblean and

such words will always "resound in the hearts of the brave."

Now then, what does the Wall street Barometer indicate this week?

First, that money is plentiful to those able to give adequate security, without much regard to its form; lenders find ample employment for their funds at a moderate interest, but not very often at 2 and 3 per cent. per month, as they once did; the banks are plethoric with coin, with deposits, and with business; not so commercial in its character it is true, as was wont before the war, but still animating and profitable. In the Bank circles, the knowing Presidents and Cashiers are full of thought, of calculation, of financial schemes; entertaining different views of Mr. Chase's policy, with hopes and fears as one or another opinion prevails, and all in doubt as to the finality except those who, working by line and rule, see a bad perspective, or following the rigid analysis of the Bullion Chemists, declare there will be no residuum in the national crucible but ruin.

Practically, however, the war goes on, the Government has plenty of money, Mr. Chase finds no difficulty in getting all he wants, even from the most sceptical of the Bankers themselves; the troops are paid, the contractors pocket their thousands, the armies advance, and the enemy retreat. All this too without Gold, the great stilyard and weights of commerce. Who then is wise enough to tell what capitalists, or even poor people may hereafter rely on? We can only record facts.

The Treasury Department having occasion to dispose of a balance of 7.30s, about ₱8 millions, has advertised to receive proposals for the same, and confident of getting satisfactory replies, comes into the street and readily meets with Bankers who are willing to advance temporarily whatever is needful. If they actually take them at par, they are sure of 5 or 6 per cent. profit after a few days. For it is positively certain that these 7.30s will be very soon absorbed. The men who have made millions out of their contracts, are beginning to think of income.

They read the reports of the City Banks and find their regular rates of profits are not extraordinary, with the exception of a few like the Chemical, which compounds its interest, or the Broadway, which dashes along like an omnibus, and rattles boldly through the street. They inquire after the Railways, and there, being encouraged by the masterly management of the New York Central, the Erie, the Michigan Central, the Pennsylvania, and a few others of that sort, go in for a fair investment, and keep the Brokers alive; but those who look ahead to the future, conclude that Government securities are "Heaven's last best gift to man," and go in for those stocks whose redemption is the most remote.

Thus we go on, one hand washing the other, the money market and stock exchange picking up all that is spilled. It is demonstrated that as yet the war debt is much less than was anticipated, that the internal revenue and the tariff are not only producing enough to pay the interest, but will go far to sink the principal, that the people bear the load with cheerfulness, and only require in return, that the Government, surrounding itself by the ablest, noblest and wisest men, without regard to party, will push forward the *policy of Victory.*

In the daily transactions of business, much difficulty is still experienced from the want of small change. Some Brokers give it at 4 per cent. premium, and cannot supply the demand. It is certainly a remarkable fact, and one detrimental to the public interest, that when the people are so willing to use the small currency of the Government, there is not the ability to supply it, though the country is full of engravers, and paper. It is believed that twenty millions of notes under the denomination of a dollar, would be readily absorbed, and at the same time give immense relief to the public.

If we wanted a reason for the scarcity of silver we could find one perhaps in the statement recently made at a meeting of photographers in this city, that the artists of this class use one million of dollars annually in a solution of nitric acid to prepare their plates and paper for the camera, and that out of this, full nine hundred thousand dollars are lost. We confess we do not see it, but it is a curious speculation, and may be taken into account by some future writer on Coin and the consumption and waste of the precious metals, and we record it for his benefit.

A valuable metal in nearly all respects like silver, except in density, and called Aluminium, produced from clay, is now successfully manufactured at the price of $10 the lb., troy weight. It is a splendid material, and might be substituted for the small three cent pieces. Both the Secretary of the Treasury and the Director of the mint have had the plan brought before them, but neither seem to take any interest in a subject, which has excited the attention of the greatest statesmen and financiers abroad.

The following quotations of sales are in addition to those given elsewhere:

New York.—Goshen Branch bonds, 101 and 104; Illinois Internal Improvement bonds, 100; Illinois Canal Registered bonds, 99; Illinois coupon bonds, 1862, 101½; do., 1870, 103⅜; Illinois Central cancelled bond scrip, 51; Little Miami, 123; Ohio 6s, 1881, 114; Jersey City Water Loan, 104; Pennsylvania Coal Co., 7 per cent bonds, 107; Detroit, Monroe and Toledo 1st mortgage, 98½; N. Y. City 5s, 1870, 101; Norwich and Worcester, 77; Cumberland Coal pref., 11 to 13½; Nicaragua Transit, 5½; U. S. 5 20s coupon, 99¾. The quotations on Wednesday were: Hudson River R. R., 2d mort., S. F. bonds, 111; N. Y. and Harlem 3d mort., 90; Lackawanna and Western bonds, 107; Del., Lack. and Western 1st mort., 111½; Galena and Chicago 1st mort., 108; do., 1st mort., extended, 108; Cleveland and Pittsburg 1st mort., 101½; do., 2d mort., 100; do., 3d mort., 90; U. S. 5s, 1871, 92¾; do., 1865, 98; Oregon War Loan, 100; U. S. 6s, 1862, 102; do., 1867, 102; do., 1868, 102; Gold, 131¾ and 132; Exchange, 145 and 146; Dutiable demand notes, 124¾ and 125.

Boston.—Eastern R. R. Income bonds, 100; Ogdensburg 1st mortgage bonds, 89½; Concord, 60; Cheshire, 18; Malden and Melrose (horse), 7¼; South Side Mining Co., 1⅞; Albany and Boston do., 10¼; Pontiac 6½ and 7⅛; Toltec, 4; Huron, 9⅞; Bohemian, 4; American Gold, 131½ and 132.

Philadelphia.—Tioga 7s, 103; Delaware R. R. mort., 100; Pennsylvania 6s War Loan, 108; Allegheny 6s, 80¼; West Chester R. Trade in the East.—Austrian Railroads.

An interview with TOWNSEND HARRIS, Esq., our late Minister to Japan, a few mornings since, enabled us to gather some interesting facts in relation to our commerce with China and Japan, to be entirely changed in its extent and value by the construction of the Pacific Railroad. We learn that the whole trade of Japan, exports and imports, amounted in 1860 to $11,000,000. Included in this were 12,000 bales of raw silk of the value of $4,000,000, and tea 11,000,000 lbs., and also vegetable wax amounting to 1,000 tons. The production of these articles is enormously on the increase. These, therefore, will inevitably come over our continent in large quantities. Shanghae is the centre of trade in Eastern China, the depot of the great valley drained by the river Yangtse, populated with one hundred and ten millions of people. Here there is unlimited material for an active exportation, and the American route will be the shortest for its use. Even with the delay now experienced in getting our China news overland from San Francisco, and by sailing vessels to that port from Shanghai, Mr. Harris frequently was able to give the British Minister later news from London than he was able to obtain by the old channels of communication. Japan lying directly in the route of navigators will also necessarily adopt the same direction in its exports.

He describes the condition of the latter country as prosperous, the rise in its products occasioning a vast increase of production. The Government and rulers are particularly friendly to the United States, more so than to any other nation. While the foreign ministers have shown both personal apprehension, and a querulous disposition towards the Japanese, the American representative acting with his usual good faith, courage and ability maintained his position under very trying circumstances with success and honor.

Mr. Pruyn the successor of Mr. Harris, (both of these gentlemen have long been well known to us,) succeeds to the enviable reputation obtained by his predecessor. In July last, when in consequence of fresh disturbances at their official residences, the other foreign representatives deserted their posts, Mr. Pruyn who was celebrating the 4th with some American friends on the coast, no sooner heard of the difficulties, than he instantly returned to Yeddo and took with him two American ladies as his guests. This act of bravery and confidence entirely won the hearts of the Japanese. "Good man, brave man," was the common remark.

Mr. Harris returned home overland and took Vienna and Trieste on his way. He describes the railway across the Sommering mountains, as being

the most magnificent work he has seen in any part of the globe. It passes those mountains with grades as low as 1 in 45, and the trains overcome them at the rate of fifteen miles an hour. He is of the opinion that the difficulties to be encountered in some parts of the Pacific Railroad, can not be greater than those vanquished in these mountains, and advises that our engineers who shall have charge of the American work should visit the Austrian line referred to; in which opinion we fully coincide.

It is to be hoped that Mr. Harris will give his countryman a history of his interesting mission, which we do not doubt will surpass those even of Lords Macartney and Amherst.

The Expanding Screw Fastenings.

This is an ingenious application of the principle of increasing the friction, and of course the holding power of a bolt, by having the hole into which it is fastened rendered smaller and tighter by expansion pieces around it, which are spread out by the action of the screw. They are the invention of those enterprising machinists, Loudon & Ahlstrom, 395 1st Avenue.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Oct. 31st, 1862, was as follows:

Passengers	$22,353 95
Freight and live stock	39,526 23
Mails and sundries	1,342 53
	$63,222 71
Corresponding week of last year	57,201 54
Increase	$6,021 17

The receipts of the Grand Trunk Railway of Canada for the week ending October 25, 1862, were:

Passengers	$23,481 17
Mails and sundries	4,966 10
Freight and live stock	68,208 23
Total	$96,655 50
Corresponding week of last year	95,391 88
Increase	$1,263 62

The earnings of the Chicago and Alton Railroad for the first week in November were:

	1862.	1861.
Passengers	$9,001 95	$4,555 75
Freights	17,830 18	14,728 61
Sundries	815 33	815 33
Total	$27,647 46	$20,099 69
Increase in 1862	7,547 77	
Total since Jan. 1.	$1,034,172 10	$934,014 42

The Michigan Southern Railroad earned for the 1st week of November, 1862 $71,315 66
Do., 1861 59,000 83
Increase $12,314 83

The Chicago and Rock Island Railroad earned the 1st week in November, 1862 $41,584 00
Do., 1861 32,979 00
Increase $8,605 00

The Galena and Chicago Railroad earned the 1st week in November, 1862 $47,778 00
Do., 1861 48,749 00
Decrease $971 00

The Cleveland and Toledo Railroad earned the 1st week of November, 1862 $25,779 00
Do., 1861 18,118 00
Increase $7,667 00

Louisville and Nashville Railroad.

The annual meeting of the stockholders of this company was held in Louisville on the 6th of October last. The Annual Reports of the President, Superintendent of Transportation, and Superintendent of Mechanical and Road Department, were read, adopted, and ordered to be printed. The receipts from transportation, etc., during the fiscal year ending June 30, 1862, have been as follows:

	Memphis Branch. 46 miles.	Lebanon Branch. 37 miles.	Main Stem. 135 miles.
From pass'g'rs.	$28,810 68	$35,079 24	$298,707 27
" freight..	23,768 65	36,032 89	343,429 12
" mail....	3,525 00	3,750 00	21,800 00
" express.	2 353 80	3,854 91	21,322 66
" rents ...	... .	107 55	456 27

Total main stem	$685,715 32
" Lebanon branch	78,824 59
" Memphis "	58,458 13

Total main line and branches—

From passengers	$362,597 19	
" freight	403,230 66	
" mails	29,075 00	
" express	27,531 37	
" rents, etc.	563 82	
		$822,998 04

And the expenses have been:

Repairs of road	$100,401 20	
" bridges	15,539 60	
" buildings, etc.	6,136 12	
" cars	22,466 63	
" engines	23,473 42	
Motive power	22,247 83	
Fuel account	28,557 50	
Oil and waste	3,316 12	
Watchmen	7,258 46	
Loss and damage	3,519 02	
Salaries	13,366 62	
Transportation	51,324 71	
All other expenses	16,799 81	
		$314,407 04
Net earnings (61.8 per cent)		$508,591 00

Included in the above earnings are $263,665 96, derived from the transportation of troops and government freights—a sum insufficient to repair the damages inflicted upon the road by the incursions of the rebels. The actual damages sustained on this account, during the fiscal year, after deducting what has been regained, amounts to $386,791 04. Of this sum, $211,100 24 has been applied to re-construction, leaving a balance of $175,870 80 still to be expended to make good the damage.

The estimated cost of completing and equipping the road as originally contemplated, after July 1, 1861, according to the last annual report was $804,841 25; of this there had been expended during the year ending July 1, 1862, upon the Main Stem, $20,680 91; upon the Memphis branch, $10,496 90; and upon the Lebanon branch, $453 63—making a total expenditure on this account of $31,639 44; and leaving to be expended therefor the further sum of $774,201 81. The company had applied all their capital and credit to the construction of the road, and relied on the net earnings to pay interest and floating debt. In consequence of the seizure of so much of the road, motive power and rolling stock, and great damage to the bridges, it was necessary to restore the same in order to make it profitable.

The company owed a large floating debt; and in the condition of its affairs no further loans could be made. The directors therefore appealed to the mortgage bondholders to capitalize the interest on the bonds, and consent to the application of the surplus earnings to the restoration of the bridges, motive power and rolling stock, and accept bonds secured by a second mortgage. The second mortgage has been executed, and a considerable part of one year's interest has been capitalized, and the work of restoring the bridges, motive power and rolling stock proceeded with. This work is still in progress on the faith of the net earnings.

The loss of revenue caused by the seizure of the road and rolling stock is estimated at $281,336 38; but this estimate will not cover the whole loss on that account, because the continued deficiency in the equipment of the road will still affect the earnings during many ensuing months.

The government rebuilt the bridge over the Cumberland river at Nashville, and furnished forces to guard the bridges; and the company not having the motive power and rolling stock to do both the local and government business, were compelled, under the exigencies of the government to do the latter.

The portion of the Main stem which was in the possession of the confederate forces is equivalent to 48½ miles for the period of one year, leaving the part operated by the company 136½ miles. On this part of the road there were expended for ordinary repairs $43,854 13, or $321 28 per mile; for renewal of ties and iron on 185 miles, $40,659 49, or $291 78 per mile—total $84,513 62, or per mile per year, $541 06. In 1860–'61, it was $388 47. In 1859–'60, $605 73. The expenditures for repairs and renewals per revenue train mile in 1861–'62 were 38.18 cents; in 1860–'61, 14.84; and in 1859–'60, 26.03.

During the past year, 463 tons of new iron were purchased, of which 227 tons have been laid; 143.5 tons of iron were repaired, and 32.5 tons re-rolled. Of the 227 tons put in the track, 143 tons were laid on the first 30 miles of the road; 29 tons were put on the division between Green river and Barren river; and 55 tons between Barren river and Nashville. The repaired and re-rolled iron was also used on the first 30 miles. Of the 27,752 cross-ties bought during the year, only 13,572 were laid: 12,303 on the first 30 miles, 502 between Green river and Barren river, and 767 between Barren river and Nashville.

The cost of repairs and renewals on the Lebanon branch during the year was $10,515 49, or $248 20 per mile. In 1860–'61 it was $318 54. In 1859–'60, $326 14. The cost per revenue train mile was 34.63, 25.40, and 25.09 respectively. Twenty tons of new iron, seven tons of repaired iron, and 3,577 new cross ties have been used on this branch.

The Memphis branch was in possession of the confederate forces for six months, which is equivalent to 23 miles of the road having been in their possession for one year; 23 miles only were therefore operated by this company. The amount expended for road repairs during this time was $5,383 64, being $234 07 per mile of road, or 23.02 cents per train mile. In the preceding year the expenses were $264 34 per mile of road, and 25.6 per revenue train mile.

The engines have run in the service of transportation department 324,399 miles (of which 274,860 were run by revenue trains) at a cost for repairs of $23,461 87, and in the service of the

road department, and on the Bardstown branch, 50,598 miles, at a cost for repairs of $2,529 90. Total miles run 374,997. Total cost for repairs $25,991 77, or 6.93 cents per mile run. For oil and waste, 0.59; fuel, 8.61; water supply, 1.02; train hands, 5.91—making the total cost per mile run by engines, 23.06 cents. Cost per mile run by passenger trains, 21.80 cents; by freight trains, 31.56; by distributing trains, 21.59—average cost per mile of all trains, 27.53 cents.

The equipment of the road July 1, 1861, consisted of 38 locomotives; 22 passenger, 9 baggage, 174 box, 132 flat and 5 boarding cars. There have been added during the year, 5 locomotives; 10 passenger, 4 express and 134 box cars. There have been lost, 6 locomotives; 14 passenger, 3 baggage, 142 box and 30 flat cars.—Leaving on the road July 1, 1862, 37 locomotives; 18 passenger, 6 baggage, 4 express, 166 box, 102 flat and 5 boarding cars.

The City of Pittsburgh and her Railroad Debt.

The Councils of the City of Pittsburgh have passed the following ordinance relative to the bonds issued to the different railroad companies.

An Ordinance authorizing the issue of Bonds to be exchanged for Bonds issued in payment of Subscription to Railroad Companies:

Whereas, By an act of the General Assembly of the State of Pennsylvania, entitled "An act to authorize the City of Pittsburgh to compromise with the holders of bonds of said city, issued in payment of subscriptions to the capital stock of certain Railroad Companies," approved 11th day of April, A. D., 1862, the Councils of said city are authorized to negotiate a compromise with the holders of said bonds, and issue new bonds to be exchanged for the old ones; now, therefore, in accordance with said act of Assembly, and for the purpose of effecting said compromise.

SEC. 1. Be it ordained and enacted by the Mayor, Aldermen, and citizens of Pittsburgh, in Select and Common Council assembled, and it is hereby enacted by the authority of the same, That the bonds of the city be issued, in the manner prescribed in said act, to an amount not exceeding eighteen hundred thousand dollars, each in the sum of one thousand dollars, dated Jan. 1, A. D., 1863, and payable in fifty years, bearing four per cent interest, payable semi-annually on the first days of July and January of each year, and having coupons annexed to cover said interest, signed by the Controller of the city, said bonds and coupons to be made payable in the city of New York.

SEC. 2. That the Controller of the city be, and is hereby authorized to compromise with any holder or holders of bonds issued by the city authorities in payment of subscriptions to the capital stock of any railroad company, by giving in exchange for said bonds, new bonds of the issue authorized by this ordinance, on the following terms and conditions, viz: The new bonds, bearing 4 per cent. interest, to be in the same amount as the old ones for which they are exchanged, and the coupons, due and unpaid, of the old bonds to be paid and canceled by transfering stock of the Railroad Company to which said old bonds were issued, at its nominal value, to an amount equal to said coupons.

Railroad Earnings--Monthly.

The earnings of the Michigan Central Railroad for October, 1862, were $322,369 06
Do., 1861 ..... 307,332 80

Increase $15,036 26

The Cleveland and Toledo Railroad earned in October, 1862 ..... $113,780 00
Do., 1861 ..... 96,434 00

Increase $17,296 00

The earnings of the Galena and Chicago Railroad Company in Oct., 1862, were ... $207,315 50
Do., 1861 ..... 221,326 27

Decrease $14,010 77

Corrected earnings for previous month $188,369 77.

The earnings of the Panama Railroad in September were $123,029 69, showing a decrease of about $10,000 on September of last year.

The receipts of the New York and Harlem Railroad for October, 1862, were $107,092 76
Do., 1861 ..... 97,857 90

Increase $9,234 86

The earnings of the Central Ohio Railroad in August were $67,173 85
Expenses 42,076 52

Net earnings $25,097 37

The October statement of the Illinois Central Railroad is as follows:

Land Department.

Acres Construction Lands sold	2,918.24	for	$31,665 82
Acres Interest Fund L'ds sold	247.30	"	2,098 11

Total receipts for the year up to Nov. 31, 1861	955,232 31
Increase	$24,394 64

Seventh Avenue Railroad.

SUPREME COURT—SPECIAL TERM.

Before Hon. Judge INGRAHAM.

The Mayor, &c., of New York, vs. John Kerr, et al.—The plaintiffs asked for an injunction restraining the defendants from laying rails through Broadway and other streets, under authority granted by an act of the Legislature, passed 1860. (Sess. Laws, ch. 513.) The court held that so far as an inquiry might arise as to the owners of the adjoining lots and their right to interfere, the question was settled in favor of the defendants by the decisions of this court, as well as of the Court of Appeals; and the only material questions for the decision of this motion are whether the corporation of this city are the owners of the fee of the streets in such a sense as to prevent the Legislature from allowing a railroad to be constructed thereon without their consent: and secondly, whether the construction of a horse railroad in the streets of the city is an encroachment upon the land that will entitle the owner of the soil to compensation. That the city of New York owns the fee of the streets was not denied upon the argument. This is so, undoubtedly, as to all the streets laid out upon the map of the city as made in 1807, and taken by legal proceedings for streets, and which prior to that time had not been taken for or appropriated to public use as streets or roads, because by that act the fee of all streets to be taken by virtue thereof was vested in the plaintiffs. As to other streets in existence prior thereto, the charters of the city and the act of 1793, re-enacted and continued in the act of 1813, (2 R. S., p. 423,) conveyed to the Mayor, &c., of New York, all the right, title and interest which the Crown of England, and afterwards the people of this state, had in any lands used for streets at the time of such conveyances. But while the title of the people was thus conveyed to the corporation by the Legislature, it by no means follows that the whole fee of such streets was vested in them to the exclusion of those who owned the lots bounded on the streets which had been appropriated for that purpose. If it be conceded that the title of the fee to these streets in the plaintiffs may be interfered with or taken away by the Legislature, without compensation, it must be remembered that such fee is held by them in trust for certain public purposes. The *cestui que* trusts are the people. The streets are to be kept open for their use as a public street, and so long as these streets continue, the interest of the plaintiffs in them can only be a trust estate for the benefit of the people.

Decisions were quoted to show that the Legislature had the power to grant a charter to a horse railroad, even against the wishes of the property-owners on the streets through which it would pass, because such a use of the street is merely a mode of excercising the public right of travel, and not an appropriation of the property of the owners of the land, requiring compensation in damages.

In conclusion the court decided:

I wish, in the disposition of this case, to express my dissent to the whole class of these decisions in which it has been held that the city authorities, or the owners of the adjoining lots on a street, whichsoever one may hold the fee of the street, are not entitled to compensation in damages for the privilege granted to a railroad company to lay their rails in a public street. The rails become fixtures, are used under the surface, and occupy exclusively a portion of the land; and for such use I think the owner of the fee is entitled to compensation, and I concur with Justice Leonard on this point, as expressed by him in his dissenting opinion. I am, however, constrained, notwithstanding that I entertain this view of the question, to yield my opinion to that of the General Terms in the First and Second districts, which have expressed contrary opinions. If those decisions are right that the owners of the soil have no claim for damages for the privileges granted to a railroad in a public street, then I concur in the conclusion that the people, being the *cestui que trusts*, may prescribe the mode in which their right to the use of the streets is to be exercised by acts of the Legislature, thus to take away the right of the city, and the late course of decisions in the courts tending to sustain such acts of the Legislature, and to deprive the public authorities of rights and powers conferred by their charters, admonish me of the propriety of yielding to those decisions, whatever may be my opinion as to the question involved therein. For these reasons I am of the opinion that the motion of the plaintiffs for an injunction should be denied and the temporary injunction dissolved.

Bald Eagle Valley Railroad.

This road lies in the lap of a valley from which on one side is lifted up the towering crest of the main Allegheny and from the other side Bald Eagle Ridge. It will open a route from the extreme northern angle of the Juniata at Tyrone to the extreme southern angle of the West Branch at Lock Haven. And as Tyrone is on the Pennsylvania Railroad and Lock Haven is on the Philadelphia and Erie Railroad, the Bald Eagle Valley Railroad will provide a communication between these two main trunks, parallel with the Allegheny mountain, and also with the Susquehanna river, at the very base and foot of the former and about an hundred miles west of the latter.

The whole length of the Bald Eagle Valley Railroad is 54 miles. Trains now run over it from Tyrone to Port Matilda, 14 miles; thence 4 miles to Martha Furnace the rails are in place; and soon thence to Unionville, 4 miles, the track will be laid; next thereafter and by Christimas time the iron (which is on the ground) will be put down to Milesburg, thirty miles from Tyrone, when (over three miles of the Snow-shoe road,) *Bellefonte*, the beautiful town which gems the geographical centre of the State, will be annexed to the dominions of the locomotive—the autocrat of all the iron roads.

Next spring the remaining distance to Lock Haven will be covered over with trackway, and then transportation service from river to river will begin, under auspices which will commend the road to local and general favor.

As the Philadelphia and Erie Railroad is now operated by the Pennsylvania Railroad under lease, and as the Bald Eagle Valley Railroad is the only cross link between said roads from the Allegheny mountain to the Susquehanna river, it is a fact which should be considered a fortunate circumstance that Lock Haven is in precisely the right spot to make it the machine and shop centre on the Philadelphia and Erie road, precisely as Altoona is the machine and shop centre on the Pennsylvania Railroad, so far as the comparison is *apposite* in the leased condition of the first named road to the owners of the last named road.

True, the Philadelphia and Erie Railroad begins at *Sunbury*, 54 miles north of Harrisburg; but it is also equally true that the Philadelphia and Erie Railroad must hereafter be worked in co-operation with the Pennsylvania Railroad from Philadelphia, rather than as heretofore and at present in co-operation with the Northern Central Railroad from *Baltimore*, otherwise the projected and chartered road on the west bank of the Susquehanna river, between Northumberland and the Juniata, will inevitably be built, whenever Philadelphia is aroused to its importance and advantage to her commerce and her plans.

Hence in practical working operations Harrisburg will be the place of junction of the Erie Branch with the Philadelphia and Pittsburg main trunk. From Harrisburg to Erie City the distance by rail will be 343 miles, or 11 miles less than the distance from Philadelphia to Pittsburg. Therefore, doubtless, the Philadelphia and Erie Railroad will be operated in three motive-power divisions between Harrisburg and Erie, exactly as the Pennsylvania Railroad is operated in three motive-power divisions between Philadelphia and Pittsburg; also as the Erie Railroad is operated in four motive-power divisions between Jersey City and Dunkirk. The distances tend strongly to indicate this result, as witness:

Pennsylvania Railroad, Philadelphia to Pittsburgh, 354 miles, three divisions averaging 118 miles.

Philadelphia and Erie Railroad, Harrisburg to Erie City, 343 miles, three divisions, averaging 114 miles.

Erie Railroad, Jersey City to Dunkirk, 460 miles, four divisions, averaging 115 miles.

Distance from Harrisburgh to Lock Haven 119 miles, an unexceptionable length for a river-side division. From Lock Haven to Altoona the distance by rail—from shop to shop—will be 68 miles.

With shops at West Philadelphia, Harrisburg, Altoona and Lock Haven, the Pennsylvania Railroad Company will have its programme, east of the Allegheny mountain, admirably fitted to the working of its trunk and leased roads. Perhaps, some day, as Philadelphia is the butt-end of the trunk and branches of the Pennsylvania Railroad, its big shop will be in West Philadelphia, just as the big shop of the New York Central Railroad is at Albany, where that road terminates at tide-water on the Hudson river, and also in connection with other roads which diverge thence to Boston and New York City.—*United States Railroad and Mining Register.*

New Route from Taunton to Fall River.

The Taunton *Gazette* says: A survey is now being made under the direction of E. S. Chesboro', Esq., Civil Engineer, of Boston, for a line of railroad from Taunton through Dighton and Somerset to a point nearly opposite Fall River, with which it is proposed to connect by means of a ferry. It is said that this route from Boston to Fall River will be shorter by seven or eight miles than the present one.

Cincinnati, Hamilton and Dayton Railroad.

The approximate earnings of the Cincinnati, Hamilton and Dayton Railroad Company for six months ending Sept. 30, 1862, were	$368,159 97
Expense of transportation, interest on bonds and State taxes	234,88 000
Net earnings	$133,279 90

Out of which a dividend of five per cent, and the government tax has been paid. The net earnings for same period last year were $78,111 82 show

ing an increase for the past six months of $55,168 08.

New Mail Service from Suez, etc.

A French postal service, by steam packets, has been established between Suez and various ports of the Indian and China seas, which service will connect with another just established between Marseilles and Alexandria, touching at Messina. The packets from Marseilles for Alexandria will leave Marseilles on the 19th of each month, at two P. M., and will carry mails for Sicily, Alexandria, Suez, Aden, Ceylon, the French establishments in India, the British possessions in India, Singapore, Cochin China and Hong-Kong.

CATAWISSA RAILROAD COMPANY'S
COAL LANDS.

PROPOSALS for the LEASING of the above valuable COAL Property will be received at the General Office of the Company, **No. 308 WALNUT ST., Philadelphia.**

This property contains among other veins, the Mammoth, 47 feet thick, one vein of 7 feet and one vein of 5 feet; all of which have been lately and thoroughly proven.

Further particulars can be obtained from the Officers of the Company as above.

By order of the Board of Directors.

T. HASKINS DU PUY, President.

Philadelphia, Nov. 1, 1862. 4t46

RAILROAD SPIKES.

500 TO 1,000 kegs 9-16 Railroad Spikes on hand, ready for immediate delivery, for sale by

NEW YORK RAILROAD CHAIR WORKS, 89 Maiden Lane.

Nov. 6th, 1862.

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 362, Post Office, New York.** 38tf

Union Pacific Railroad Co.

OPENING OF BOOKS OF SUBSCRIPTION.

BOOKS OF SUBSCRIPTION TO THE CAPITAL Stock of the Union Pacific Railroad Company will be opened on WEDNESDAY, the 5th day of November, A. D., 1862, at noon, on the terms and conditions therein set forth, at the places and with the persons following, at their respective places of business:

Albany,	New York,	Thomas W. Olcott.
Baltimore,	Maryland,	Thomas Swan.
Buffalo,	New York,	Dean Richmond.
Boston,	Massachusetts,	Samuel T. Dana.
Burlington,	Iowa,	Lyman Cook.
Cincinnati,	Ohio,	S. S. L'Hommedieu.
Columbus,	Ohio,	William Denison.
Chicago,	Illinois,	William B. Ogden.
Cleveland,	Ohio,	Amasa Stone.
Concord,	New Hampshire,	Joseph A. Gilmore.
Carson City,	Nevada Territory,	Wells, Fargo & Co.
Detroit,	Michigan,	Chas. A. Trowbridge.
Dubuque,	Iowa,	Platt Smith.
Denver City,	Colorado,	George W. Clayton.
Hartford,	Connecticut,	G. P. Bissell & Co.
Indianapolis,	Indiana,	James M. Ray.
Louisville,	Kentucky,	James Guthrie.

Pittsburg,	Pennsylvania,	Thomas M. Howe.
Rutland,	Vermont,	Henry H. Baxter.
St. Louis,	Missouri,	Wm. M. McPherson.
St. Paul,	Minnesota,	Parker Paine.
Salt Lake City,	Utah,	Brigham Young.
San Francisco,	California,	Wells, Fargo & Co.
Trenton,	New Jersey,	Philemon Dickerson.
Wilmington,	Delaware,	R. R. Robinson & Co.
Wheeling,	Virginia,	S. Brady.
Washington City,	District Columbia,	R. W. Latham.

Said books of subscription will remain open on the terms aforesaid for at least two weeks from and after noon of said 5th day of November, at the places and with the persons above set forth.

By order of the Board of Commissioners of the Union Pacific Railroad Company. OFFICE OF THE SECRETARY, **54 William st.**

WILLIAM B. OGDEN, President.
HENRY V. POOR, Secretary.
THOMAS W. OLCOTT, Treasurer.

Datated New York, this 25th day of October, 1862.

OFFICE OF THE NEW YORK CENTRAL RAILROAD CO., ALBANY, November 1, 1862.

THE annual election for Directors of this Company, and for three Inspectors of the next Election, will be held at the Office of the Company, in the city of Albany, on the second Wednesday (the tenth,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

ROBERT L. BANKS, *Secretary.*

5t45

ALBERT H. NICOLAY,
STOCK & BOND BROKER
AND AUCTIONEER,
No. 52 WILLIAM ST., (near Wall,)
NEW YORK.

☞ A. H. N. BUYS AND SELLS AT THE STOCK BOARD STOCKS AND BONDS, also GOVERNMENT SECURITIES, for cash or on time, EXCLUSIVELY on COMMISSION and upon as FAVORABLE TERMS AS ANY STOCK HOUSE IN NEW YORK.

☞ STOCKS AND BONDS, ALSO INSURANCE SCRIP BOUGHT AND SOLD at PRIVATE SALE, INTEREST ALLOWED on DEPOSITS and Dividends collected.

☞ REGULAR AUCTION SALES OF STOCKS AND BONDS EVERY MONDAY AND THURSDAY (WHICH HAVE BEEN THE REGULAR ESTABLISHED DAYS OF SALE FOR MANY YEARS) AT 12½ O'CLOCK AT THE STOCK SALES ROOM, **No. 52 WILLIAM STREET,** OR AT THE MERCHANTS' EXCHANGE SALES ROOM, **No. 111 BROADWAY,** whenever desired.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK.

HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL,** DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGE'S CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

WILLIAM BORDEN.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications, and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or at either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to

Hints on the Construction and Management of Railways.

Those good people who take the train for business or pleasure, are not all aware at what cost of brains and money they are enabled to travel so comfortably and so rapidly. It may seem a simple affair to the uninstructed to lay down a railway, and it has now become to the Civil Engineer a labor of comparative ease; but if we consider for a moment what a variety of knowledge, and what an immense amount of calculation are necessary to ensure a perfectly constructed work, we shall find there is no greater advance in any other department of Science, than there has been in the perfecting of the Railway system.

Let us for a few moments contemplate the explanations we should be compelled to make to any stranger, who having for the first time in his life seen a railway, should ask how and why it was constructed, and what he would be required to know to construct one himself. He would be told that a knowledge of the geography of the Country, and its physical Geography especially, is the first step in his proposed attainments. This applied to the particular district in which it is proposed to construct a railway is indispensible. It was not for many years for example, supposed practicable to construct one through the gorges of the Delaware and Susquehanna mountains, where now the Erie passes almost without obstruction. Geology is also an aid to the Engineer, since the character of the rocks is of decided importance, in making his estimates for excavation and cutting. To know the constituent parts of these, their dip or inclination is to facilitate the means of their removal, and if a mineralogist he determines their hardness, their cohesion, their fitness for bridge and culvert purposes, and their durability.

One of the chief difficulties which modern architects meet with in the construction of their great public buildings is in the choice of materials. There is one kind of lime stone which has been extensively used in this city for churches and even a university, and is found, to contain a particular deliquescent carbonate which is slowly but surely producing its complete disintegration. Of what immense consequence is it then, in the construction of abutments, bridges and culverts on a railway over which millions of tons of freight and millions of passengers pass annually, that the most perfect material should be employed. So, too, as wood necessarily enters into the construction of a railway in large quantities, it is a question of the first importance to know what kinds should be used. The nature, durability, elasticity, fibre, hardness, resinous character all pointed out by the Botanist, confirmed by observation and experience, must be taken carefully into account, and even the manner in which it is prepared for use at the mill. For it has become necessary on many roads, to rebuild nearly the whole frame work in consequence of the improper choice of material at the start. The Elmira and Williamsport Railroad Company found one of its most expensive outlays in the necessity of taking up its original cross ties, made of hemlock which soon decayed, and substituting chestnut and oak in their place. The snapping of a tie may involve the breaking or sinking of a rail, and the destruction of a train. It is also important to be careful in the selection of the best timber for longitudinal sills, which are to bear the rails, since the stone block system of support, which was tried on some of our earliest railways, as the Albany and Schenectady, have been given up in consequence of there rigidity, and their destructive reaction upon the machinery of the Locomotives, and the trucks of the trains.

But ascending from these commoner requirements necessary to the material parts of the railway system, we find a more important part yet to be performed by the Engineer. He has to trace or survey his route. He has to study the gorges, the hills, the streams, the rivers, the vallies, the plains he is to pass. Some routes are so doubtful that parallel lines have to be surveyed at considerable distances from each other, these crossed at right angles, and the whole plotted down, and a choice made on close mathematical reasonings to get the true line with an average general advantage. The field notes, which in themselves are but a record of the Engineers' progress and observations, may be kept by intelligent assistants, but to decide on the results requires talent of a high order. It is this power of discrimination, of choice, this comprehension of results, which shows itself in the final success of many a railway, while the want of it is sure to entail great and unnecessary expense. The Erie Railway was a great loser by incompetent Engineering at its first start. Miles of trestle work began, were abandoned as soon as their unsuitability became evident, and embankments were substituted: a part of the Utica and Booneville road is undergoing the same change.

But supposing the surveys are all of the best description, adapted to the Country through which they were made, with careful reference to the traffic to pass over the line, the commercial centres that are to be favored, and the population which is to give it support, there are many important subjects to be considered, in which other kinds of knowledge are to be called into use.

In crossing rivers where permanent bridges are to be constructed, the science of Hydrodanymics is to be applied. The flow of a stream, the quantity of water between its banks, its increase from freshets, and the probable force with which it will impinge upon a resisting body like a pier, must be carefully calculated, and that they often are not, is evident enough from the continual destruction of railway bridges after violent rain storms. One of the greatest expenditures to which our American railways have been constantly subjected arises from this cause alone. On the contrary, we may see what good Engineering will do in this particu-

lar, when we look at the Victoria tubular railway bridge over the turbulent St. Lawrence at Montreal.

But the Engineer must be also a good architect, or his timber work will not be well framed and adjusted, his bridges will be insecure, his work shops and train depots will be inconvenient and expensive. The principle of arches, in wood and stone, their shape, their thrust, their angles, curves, their limits of location, their span, &c., are of the utmost importance, and involve far more thought and calculation than would be at first supposed. For these are all very material in their place, and if they were better planned and more thoroughly studied out, we should not so often hear of the breaking down of bridges with railway trains upon them and so frequent a loss of life. It was but a few years since, that a bridge of some pretensions on a Northern road was the scene of a frightful disaster. Besides this peculiar knowledge of the physicist and scientific man in relation to the obstacles he has to overcome, and the materials with which his road way is to be constructed, he must soar into the region of abstract principles and apply them also to the business in hand. He must of necessity be a good geometrician, that he may calculate the magnitude, quantity and extension of various portions of his work, such for example as embankments, retaining walls and viaducts; a good surveyor that he may choose the best lines, adjust his grades; and a good mathematician that he may not fail in his curves. And when all is done, when his road is complete, smooth, ballasted and drained, then he is further tasked to the utmost of his ability in the selection of his Engines, with reference to weight, to the amount of business to be performed, the number of miles there are to be run, the amount of fuel they are to consume and in short the entire fitness and economy of the Engine. Every practical Engineer knows there is a vast difference in the performance of locomotives even when constructed apparently on the same model. A few pounds weight in this or that part of the gearing will sometimes have a decided effect on its movements, a valve will sometimes make quite an alteration in effects, some engines whose cylinders are over heavy in proportion to the whole weight of the Engine, will give a swaying motion to it, which is destruction of the rails. Thus Crampton's Engines are said to be getting out of favor abroad in consequence of this defect.

The proper kind of fuel, the proper quantity of fire surface, the most efficient pressure on the pistons, the best form of exhausts, of smoke stacks, the super-heating of the steam itself are all subjects of interest and practical importance.

And then too when the Engines are all perfect, the passenger cars commodious, and the freight cars of the best and the strongest, great judgement is required in working the roads themselves. Much if not all the success of some of our railways can be traced to their skilful management in these particulars. There is often apparent business which is done at a loss, there is again a moderate and steady business which pays. Sometimes there are trains working at particular hours which are totally unrequired, and again they are often run hundreds of miles unnecessarily and of course at a loss. All this must be arranged on exact principles. Waste of steam and fuel and detention at stations and loss of time waiting for trains ahead, will tell on the receipts of any Company. When the Harlem, which we consider an admirably worked line, came into the hands of its present scientific and practical managers, the President, he cut off six hundred miles of work for his Engines, and did all the business of the road notwithstanding, and by this and other intelligent economies, lifted the Company out of its difficulties and now reports a large increase of revenue.

We have thus briefly glanced at our proposed subject of remark, more for the sake of its suggestiveness than to furnish a manual. There are other exceedingly important details which for want of space we must pass over. There is the long disputed and yet unsettled form of the rail itself, with the innumerable claims of superiority for different patterns according to the zeal of their inventors; the chairs in which they are seated, the spikes to hold them down with or without chairs, the character of the iron itself, the draining, the ditches, the regulations of the road, the differences of time to be considered on lines running east and west, (in France this is all arranged by clocks with double sets of hands adjusted scientifically for the differences of longitude) the system of telegraphs, and of signals, all these come under the consideration of efficient and profitable management.

Thus the railroad is no trifle or toy to be played with, and yet unfortunately many of our best lines have been for years under the management of persons who getting their instructions from Wall or Third street, have been the ruin of many of their best friends and supporters. We imagine the publicity which is now given to their earnings and expenditures is doing great good, preventing them from being made the footballs of speculators, presenting their character in their true light, and giving timely alarm in case of mismanagement. The Railroad Journal proposes in its conduct to be a faithful friend of the system, and to give stockholders especially, all the information they require when their property is improving, or when it is time to look after it.

Above all our readers will perceive in all future projects for the construction and management of railways, and especially of such a work as the Pacific, how absolutely necessary it will be to have the assistance, experience, and skill of scien- and practical Engineers to ensure success.

There are some subjects which we may discuss separately on some future occasion, such as way and through travel, broad and narrow gauges, parallel and contending lines, low and high fares, the duties of drivers and stokers, of flag men, the Express trains and companies; of watering the Engine and waste of fuel—all of them worthy of careful study.

It is a fact worthy of notice that the principal railways of New England are now regular paying works and their stocks command a premium, the sole reason for this being found in the ability with which they are managed.

Southern Railroads.

A railroad connection, a distance of about 40 miles, has been effected between Danville, Va., and Greensboro', N. C., and also between the great Central line from Selma, Alabama, to the crossing of the Mobile and Ohio road in Mississippi. An inland route is thus opened to the Confederates from Richmond, through North and South Carolina, Georgia, Alabama and Mississippi, to Vicksburg.

Bellefontaine and Indiana Railroad.

The earnings of this road for the fiscal year ending December 31, 1861, were as follows:

Earnings from passengers		$98,255 02
" " freights		278,080 21
" " mail		17,850 00
" " express		10,347 64
		$404,532 87
Expenses during same time—		
Repairs of track	$60,863 44	
" engines	21,446 27	
" cars	22,260 67	
" buildings	2,010 15	
" bridges	4,181 38	
Train expenses	43,343 63	
Depot and station exp.	15,717 37	
Wood	30,374 61	
Oil and waste	2,760 51	
Salaries	5,814 87	
Loss and damage	2,800 96	
Interest and exchange	3,647 07	
Foreign agencies	4,328 79	
All other expenses	16,059 99	
		235,609 71
Net earnings		$168,923 16
Interest on bonds	$86,916 48	
Taxes	5,269 86	
		92,186 34
Surplus		$76,736 82
A comparison of earnings with those of the preceding year shows a gain of		$91,211 96
Deduct increase of expenses		24,284 12
Gives increase of net earnings		$66,927 84

The increase on through business was $97,789-58; decrease on local business, $7,072 12. The excess of through business over local was $208,-512 50.

The proportion of working expenses to gross earnings is 58¼ per cent. These have been carefully watched, and kept at as low a point as was found practicable consistent with the preservation of the road, and the prompt performance of the service.

The largest item of expenditure is in repairs of track. The amount expended for this purpose in 1861 was upwards of $60,000, of which nearly one half was for renewal of rails. There were used in this department during the year, 3,295 bars new rail and re rolled iron, making 687 tons; 124 kegs spike, 68 kegs rivets used in repairing compound rail, 5,781 new chairs, 24,322 new ties, and 1,417 old rails repaired and relaid.

Construction account has been increased by the sum of $2,652 31.

The amount of capital stock and first mortgage bonds are unchanged. Of second mortgage bonds, five have been issued during the year, in redemption of dividend scrip, and three have been redeemed in the settlement of accounts—giving an increase of $2,000 during the year. One income bond of $500 has been redeemed and placed in the sinking fund. The sum of $99,000 of these bonds is still in the hands of the C., C. and C. R. R. Co., and $86,500 of them are extended to 1870. The sinking fund has redeemed $14,000. The real estate agent has redeemed during the year $26,500 of real estate bonds—leaving now outstanding $93,250. The total funded debt of the company is $1,231,750.

The following is the General Balance Sheet December 31, 1861.

ASSETS.

Cost of road and equipment	$3,030,583 92
Unsold real estate	57,679 88
Mortgages, notes and cash in hands of real estate trustee	65,046 32
Sinking fund for redemption of income bonds	3,824 05
Bills receivable	30,278 74
Due from Executive Committe Bellefontaine Line	56,653 38
Track materials and fuel on hand	21,858 37
In hands of treasurer and agents to pay interest on bonds	23,742 99
200 shares Col., Piqua and Indiana R. R. stock at cost	10,000 00
One bond of Marion Co., Ohio	1,000 00
	$3,300,667 65

LIABILITIES.

Capital stock	$1,859,813 02
1st Mort. bonds 7 per ct. due 1866	791,000 00
2d " " " 1870	162,000 00
Income " " 1859	99,000 00
" " " 1870	86,500 00
Real estate " " 1858	1,000 00
" " " 1861	4,250 00
" " " 1863	40,000 00
" " " 1866	48,000 00
Dividend scrip to be funded in 2d Mortgage bonds	4,328 00
Bills payable	4,203 80
Car loan from C., C. & C. R. R. Co., 7 per cent.	11,737 29
Unpaid interest on bonds	35,301 75
Balance of transportation account	153,533 79
	$3,300,667 65

The office of the company is at Indianapolis, Ia. The officers and directors are—

President—JOHN BROUGH.

Directors—John Brough, Henry Wick, W. A. Otis, Selah Chamberlain, Stillman Witt, James H. Godman, John Mills.

Secretary—J. M. TOWNSEND.

Treasurer—HENRY WICK.

Hartford and New Haven Railroad.

The earnings of this road for the fiscal year ending August 31, 1862, have been as follows:

From passengers	$412,452 18
" freight	292,596 54
" rents, mails, etc	42,252 08
	$747,300 80

And the expenses were:

Repairs of road and bridges	$79,919 12	
" engines and cars	61,091 47	
" stations, etc	6,525 31	
Wood, coal and oil	64,620 36	
Transportation and general expenses	144,209 51	
Lost and damaged goods	636 15	
		357,001 92
Net earnings		$390,298 88
Interest		52,910 99
Balance		$337,387 89

The number of passengers carried on the road during the year was, 511,451. Tons of freight transported, 190,270. Miles run by passenger trains, 256,694; by freight trains, 88,378; by other trains, 2,288—total miles run, 347,460. The report says:

The gross income of the road exceeds that of the last year in the sum of $34,432 87. Of this increase, $30,427 06, or nearly the entire amount, was derived from the freight traffic. The receipts from passengers and freight show a diminution of $13,236, as compared with the income of the year 1860. The increase in the number of passengers is 11,563. This additional number over the last year was composed entirely of military, and does not show the same relative increase in the receipts of the road, owing to the diminished rates they have been charged by the Company.

The number of miles run shows an excess of 23,869. Although the increase of mileage is large, the actual expenditure for fuel is about the same as the last year. This result is chiefly attributable to the more general use of coal in the locomotives, and the saving in this respect will be still greater in future, by the gradual substitution of coal for wood as fuel.

The operating of the road has been conducted with entire exemption from serious accident of any kind.

No expense has been withheld to maintain the track and equipment in good working condition, and in each of those departments all deteriorations are made good as fast as practicable, and the cost charged into the current expenses.

Reference has been made in former reports to the prospect of constructing an iron bridge over the Connecticut river, on the line of the Company's road. Some measures have been taken during the past year for the final accomplishment of this most important object. The masonry for the additional piers required to support an iron superstructure has been contracted for, and that part of the work is progressing. The piers are to be of granite, and thus uniformity will be preserved with those now supporting the present bridge. Owing to the unsettled state of the iron market, and the great demand made by government upon the iron establishments of the country, it has not yet been found practicable to make any satisfactory arrangements for the iron work of the bridge. It is to be hoped that a more favorable state of affairs in this respect will soon take place, and that this portion of the work may also be commenced. The cost of the proposed bridge and masonry can not be less than $200,000, and will not probably be greatly in excess of that sum. The expenditure will be fully justified, in placing the business of the Company beyond the risk of interruption, or of subjecting the public travel to the greatest inconvenience—a risk to which it will be more or less exposed so long as the present wooden structure remains.

The results of the year's business are very satisfactory, and in view of the greatly disturbed state of public affairs, they afford gratifying evidence of the resources of the road, and of its ability to command a large business under circumstances which must be regarded as of the most unfavorable character.

By recent acts of Congress, and also of the Legislature of the State of Connecticut, the amount of taxes required to be paid by railroad companies has been very largely increased. The tax imposed by this State is three-fourths of one per cent. upon the market value of the stock, and on this basis the assessment to be paid by this Company to the State will amount to nearly twenty-five thousand dollars.

In addition to this, a tax is levied by Congress of three per cent. upon the gross income from passengers; together with a tax of three per cent. upon the amount of all dividends declared. These several items will amount in the aggregate to a sum nearly or quite equal to two per cent. upon the capital stock of the Company. While the stockholders of this Company will cheerfully bear their full share of such burdens as the public necessities may demand, it can hardly be considered equitable that the road should be made to bear exclusively this increased amount of taxation. Time therefore may develop the expediency of making some changes in the Tariff of Passengers and Freights. Some roads have already advanced their charges to meet these new calls upon their income, Congress having made provision expressly for this purpose; but it is not contemplated by this Board to make any changes in this respect until the necessity for such course is apparent. It is, however, competent for the stockholders to take such action on the subject as they may consider that their interests require.

The suit which has been so long pending against the New York and New Haven Company, approaches to a conclusion. The evidence has been taken, and the argument was assigned for the 17th day of September, before the Hon. B. F. Boney, the referee appointed by the Superior Court of New York.

In pursuance of a decree of the Supreme Court of this State, the restrictions against this Company running their trains to the steamboat dock at New Haven have been removed. A daily connected line by railroad and steamboat to and from New York has been established, and is now in successful operation. With this exception, all the trains of the road run in connection with the trains of the New York and New Haven road, as heretofore: but the independent position which this Company now occupies in its relations to other roads is not, in any aspect of the case, to be regretted.

A dividend of 4 per cent. has been declared, making 11½ per cent. for the current year, the Company also assuming to pay the government tax of 3 per cent. on the dividend declared.

The income account of the Company for the past year is as follows:

Cash on hand September 1, 1861	$123,241 63
Income of the road	747,300 80
Real estate sold	175 00
H., P. & F. R. R. Co., retaining wall	220 00
Dividend Tomlinson Bridge Co	8,850 00
	$879,787 43
Dividends paid	$248,908 00
Operating and repairing road	368,976 69
North Haven Bridge	2,310 55
New Car House, Hartford	3,482 81
New Connecticut River Bridge	3,664 23
Accounts due the Company	42,088 89
Balance of interest	52,910 99
Cash on hand September 1, 1862	157,444 27
	$879,787 43

The following from the Ledger presents a general statement of the affairs of the Company September 1, 1862:

Capital stock	$2,350,000 00
Bonds	927,000 00
Contingent fund	458,725 58
Reserved fund	150,000 00
Unpaid dividends	12,196 00
Profit and loss	161,137 89
Debts due by the Company	4,156 01
	$4,063,215 48
Construction	$3,128,616 80
Middletown extension	25,977 28
Real estate, land, dwellings, etc	62,252 58
Tomlinson Bridge stock	102,888 67
Equipment	254,000 00
Wood, stock and tools	135,677 28
Debts due the Company	196,359 00
Cash on hand	157,444 27
	$4,063,215 48

The office of the Company is at Hartford, Ct. The director's chosen September 17, 1862, are:

President—CHARLES F. POND.

Directors—Charles F. Pond, Julius Catlin, Cornelius Vanderbilt, Henry Coit, Ezra C. Read, Chester W. Chapin, James S. Brooks, A. G. Hazard, Samuel H. Parsons.

Superintendent—E. M. REED.

Secretary—S. P. CONNER.

☞ Mr. F. Wolcott Jackson, who has succeeded his father, (the late J. P. Jackson, Esq.,) as Superintendent of the New Jersey Railroad and Transportation Company, has just been elected President of the Newark City Tract Society, a position in which he also succeeded his father.

Commerce of San Francisco.

The exports of Merchandise from San Francisco for nine months ending October 1, were as follows:

	1862.	1861.
N. York & Boston	$2,521,487 49	$1,096,815 70
England	662,349 25	2,063,384 75
Mexico	634,559 54	790,480 23
Peru	171,422 38	97,695 87
Sandwich Islands	211,753 72	204,004 55
China	548,454 94	521,181 50
Australia and New Zealand	131,213 93	836,562 30
Victoria V. I	1,736,772 72	872,572 49
Japan	13,169 68	14,139 91
Other Countries	787,444 10	687,012 74
Total	$7,388,627 85	$7,183,850 04

The exports of treasure and merchandise combined for the first nine months of the past two years have been as follows:

	1862.	1861.
Treasure exported	$29,639,816	$30,452,006
Merchandise	7,388,627	7,183,850
Total	$37,028,443	$37,635,856

The receipts of treasure from all sources during the past nine months have been as follows:

From foreign countries	$677,909
From the North coast, including about $900,000 from British Columbia	2,601,687
From the interior of the State, including about $4,000,000 from Washoe	31,165,847
Total	$34,445,443

Of this amount, $28,998,526 were in uncoined gold and silver from the mines of the coast.

Transportation of Baggage.

THROUGH TICKETS, EXTRA BAGGAGE TAKEN BY THE COMPANY MUST BE TRANSPORTED IN THE SAME MANNER AND TIME AS ORDINARY BAGGAGE; IT CANNOT BE TREATED AS FREIGHT.

The case of Glasco *vs.* New York Central Railroad Company, just decided by the Monroe General Term of the New York Supreme Court, holds that the obligation of a railroad company is to take whatever is received as baggage from a passenger in the baggage car of the train in which the passenger is taken, and take it along with, and deliver it to the passenger at the place of destination; and that obligation is the same, whether the baggage is within the quantity allowed to a passenger to be carried without any charge, other than the ordinary fare of the passenger; or whether it is an extra quantity for which an additional charge is made.

It appears that in July, 1857, Sarah Ryan, then in New York, started for Canada, where her husband was, taking with her the goods of her husband, which were subsequently lost. She had a trunk, a bundle of bedding, and a roll of carpeting, a lot of carpenters tools, &c. She purchased at the ticket office at the wharf at New York, of one John C. Hewitt, the agent of the people's line, three tickets, one for the steamboat from New York to Albany, one for the Central Railroad from Albany to Charlotte, and one for the lake boat from Charlotte to Cobourg. One ticket she gave up on the steamboat before reaching Albany; one she gave to the defendant's conductor, on the railroad before reaching Charlotte; the third one she retained, on finding her baggage lost, and paid her money in its place. The goods were all weighed at New York, and she was charged freight on 225 pounds over what was allowed as ordinary baggage. For her passage and ordinary baggage she paid Hewitt $4.50; and for extra freight on the 225 lbs. she paid him $3, in all $7.50. The payment of the freight on the extra baggage was receipted on the ticket. When she arrived at Albany, she saw her baggage put in the baggage car of the defendant, on the same train she went in. On arriving at Rochester the goods were not delivered to her, nor at Charlotte, nor at Cobourg, nor could she find them, though she looked for them. They were never delivered to her or her husband. The claim was duly assigned to the plaintiff who brought the action to recover the value of the property.

On the trial at the Circuit, the judge charged the jury, among other things, that the main question in the case was whether the defendant discharged its duty as a common carrier. That the whole personal property of Mrs. Ryan, as well what was allowed as baggage, as that upon which freight was paid, must be treated and regarded as personal baggage, and it was the duty of the defendant to carry and deliver this property with Mrs. Ryan, and at the same time. That it was also the duty of the defendant to deliver this property upon the arrival of the cars at Charlotte, to Mrs. Ryan, or on board of the steamboat at Charlotte, or into the custody of some person having charge of the boat, or authorized to receive baggage for the same. That the delivery at a warehouse was not sufficient, even if made within what would be a reasonable time in respect to general freight received for transportation. That the trunk and bundles were to accompany the person,, and the defendant was bound to deliver them to the person or upon the vessel with Mrs. Ryan. That a traveller is not bound to wait for his baggage beyond the period requisite to enable him to continue the journey without interruption from such cause. To this part of the charge the defendant's counsel excepted; and requested the court to charge, first, that the fact that Mrs. Ryan riding on the defendant's cars, from Albany to Charlotte, on a ticket furnished by Hewitt, was not sufficient evidence of a contract between her and the defendant, by which the defendant assumed, or undertook for hire to carry the goods in question from Albany to Charlotte; and second, that, if the jury should find that the defendant undertook to transport the goods from Albany to Charlotte, and also found that they were delivered at Charlotte in the usual way for the delive y of goods for Cobourg, namely, at Holden's warehouse, within a reasonable time, the plaintiff could not recover. The judge declined so to charge. The jury found a verdict for the plaintiff for $191 21; and the defendant appealed to the General Term of the Court. The following is the opinion of the General Term.

JOHNSON, J.—The first point made by the defendant is, in substance, that there is no sufficient evidence to show any undertaking on its part to transport Mrs. Ryan and her goods from Albany to Charlotte, over its road. But I think the evidence is abundantly sufficient to prove such an undertaking. The contract was made in the City of New York, between Mrs. Ryan and a person professing to act as agent, to transport her and her baggage from that place to Cobourg in Canada. She paid the amount required for the transportation of herself and baggage to the place of destination and received three tickets; one for a passage by steamboat to Albany, another for a passage over the defendant's road to Charlotte, and a third from that place to Cobourg. When she arrived at Albany her baggage was placed in the baggage car, where the baggage of passengers is usually carried, in the same train in which she took her passage in one of the passenger cars. The conductors upon the route received the ticket as evidence of her right to ride upon the car as a passenger, marking it, and taking it up at or near the end of the route, in the usual manner, without demanding payment of any other fare by her. The defendant's agents whose business it is to look to such matters, having accepted and treated her evidence or token of the right claimed and exercised by her, as sufficient, the law will presume the undertaking valid and binding until the contrary appears.

The question then arises, whether the contract was broken by the defendant, so as to give a right of action to the person with whom it was made or his assigns. This depends upon the question whether it was performed by the defendant according to its tenor and effect. That it was not so performed on the part of the defendant is, I think, rendered entirely clear by the evidence. The contract obviously was to transport Mrs. Ryan and her baggage with her at the same time as personal baggage. A considerable portion of the property, as appears from the evidence, was not such as would have been regarded as personal baggage, which the defendant would have been bound to transport under an undertaking to carry the person merely. Such an undertaking implies an agreement to carry with the passenger such limited quantity of articles for personal use, pleasure or amusement, only, as are usually carried by travellers. But here was an express contract. A portion was deducted as baggage which the passenger had the right to have carried in consideration of the fare paid by her for the passage of herself, and the balance was charged and paid for as extra baggage. It was not received or treated as ordinary freight, but as baggage, to be carried with the passenger upon the same train.

The obligation of a railroad company undoubtedly is to take whatever is delivered and received as baggage from a passenger, in the baggage car of a passenger train in which the passenger takes his passage, and take it along with and deliver it to the passenger at the place of destination, in the usual manner of transporting and delivering baggage. And in this respect the obligation is the same, whether the baggage is within the quantity allowed to a passenger to be carried without any charge, other than the ordinary fare of the passenger, or whether it is an extra quantity, for which an additional charge is made. If it is taken as the baggage of the passenger, whether ordinary or extra, it is to be carried with the passenger, unless there is some agreement to the contrary. Any other rule would be productive of great inconvenience and hardship, if not loss, and would subject travellers, often, to intolerable delays and annoyances. The judge was right therefore at the Circuit, in charging the jury that the property in question, under the circumstances of the case, was to be regarded and treated as personal baggage.

It is abundantly established by the evidence that the defendant did not take the baggage to the place of destination on its line with the passenger and that it had not been found, or delivered

or offered, by the defendant, at the time of the commencement of this action, which was about two weeks after the passage. A right of action had therefore, undoubtedly, accrued when this action was commenced. * * * *

There was I think no error in the charge, or in the refusal to charge as requested; and a new trial must be denied.

National Copper Mining Company.

Extract of annual report of National Mining Company, dated September 1, 1862:

Statement of mineral raised and prepared for shipment, during the year terminating with the close of navigation, 1861, viz:

	Per cent.	lbs.
762 masses copper	59	1,109,796
613 bbls. barrel work	26½	499,962
215 bbls. stamp and covert work	14½	274,559
Total product		1,884,317
Against a total product, for same period in 1860, of		1,455,418
Increased product		428,899

The average product for the year is, therefore, a little over 78½ tons per month, against about 60½ tons per month in 1860.

It should be stated here, that the season of navigation was unusually favorable last year, and that a portion of the product of November, 1861, was forwarded and included in the smeltings of the year. The smelting account, therefore, shows crude ore smelted, amounting to 1,888,161 lbs. which yielded in refined copper 1,383,761 lbs., or 73 1-7th per cent, which was sold and produced, after deducting all commissions, freight and incidental charges, net cash, $280,763 57, being an average price of 20.29 cents per lb.

The cost of production, by which is meant all mining costs, labor of every description at the mine, transportation of mineral and supplies to and from Ontonagon, fuel and mine timber, and all salaries at the mine for the year, amounted to $140,703 38, being an average of $11,725 25 per month, $149 36 per ton of mineral raised.

The current expenses of the past year, not including supplies, which are absorbed in the payment of wages, &c., have been as follows, viz:

Expenses at the mine, as already stated	$140,703 38
Smelting charges	18,081 09
Machinery	4,611 02
General expenses, including salaries, taxes, &c.	6,429 33
Interest, &c.	955 07
Freight and insurance on copper and machinery	11,236 39
Whole expenditures except for supplies	$182,016 26

Estimated by the above data, the apparent net earnings of the year will amount to $98,747 31. The cost of mineral delivered at Cleveland, is 9.64c. per lb., and of refined copper, by the same estimate is 13.15c. per lb. These results are very satisfactory, especially in view of the depressed state of the market for copper throughout nearly the whole of the year 1861; the price obtained, subject to all charges, having fluctuated from 17½ cents to 20½ cents, at which rates we were compelled to effect sales to pay current expenses. Subsequently the market for copper improved, and we were enabled to obtain prices varying from 27½ cents gross in January, 1862, down to 21½ cents in April and May last. The entire product of the year having been disposed of, and the account made up from actual returns, and not from estimates, exhibits therefore, as before stated, the average net price of 20.29 cents against 20½ cents per lb. the previous year.

The aggregate receipts of the Company, for capital stock and sales of copper and silver, from the commencement of operations to the date of the balance sheet annexed, are as follows, viz:

Capital stock paid in	$110,025 00
Aggregate sales of copper and silver, as stated in last report to September 1st, 1861	658,036 17
Sales of copper 2 mos. from 1st Sept. to 1st Nov. 1861	41,733 40
Total	$789,794 57
The expenses of every description, including cost of all supplies, for the year ending 1st Sept. 1861, (see last report,) were	$164,228 73
To which add expenses incurred from 1st Sept. to 1st Nov., 1861, 2 mos., including supplies purchased	60,499 11
Total	$224,727 84

The above being for a period of fourteen months up to the close of the fiscal year, which, estimated at the average of $16,025 per month will give, including available supplies still at the mine, an expenditure for the year of $192,624, all told.

New Brunswick and Canada Railway and Land Company.

The half-yearly general meeting of Shareholders in this Company was held in London, on the 21st of August. The secretary read the following report of the Directors:

"Your Directors have the satisfaction to report that the Railway was opened on the 10th July last to the Woodstock terminus, a total distance of 88 miles. Some of the works are at present necessarily only of a temporary character, but they are in the course of being replaced by permanent constructions. In addition to the ordinary statement of accounts and official balance sheet, your Directors present the results of the occasional traffic worked during the six months ending on 30th June last. Sixty-five miles only were then in work. For ten weeks the line was completely closed up by the severity of the weather; and the want of engines also materially affected the receipts, as well as increased the difficulty of keeping the line open. The returns for the current half-year will, it is believed, show a very different result. The entire line having been now opened for public traffic, your Directors believe that the proper time has arrived for considering the financial position of the Company, and of adopting means to meet the outstanding liabilities, and, with this view, they will submit a resolution to the Proprietors. It is also necessary to draw your attention to the inadequate amount of rolling stock now on your line. But comparatively little traffic can be worked with five engines, three of which are of but small power, and the number of wagons and carriages is also much below the requirements of the line. It is estimated that £30,000 will be required for this purpose. Your Directors have made the necessary application to the Provincial Government for a grant of the remaining quantity of land to which the Company is entitled under the several Facility Acts."

The Capital Account to the 30th of June shows that £389,602 had been received, including £18,000 from the New Brunswick Government, £117,683 on mortgage bonds, and £16,473 on temporary loan; and the total expenditure amounted to £407,771, leaving a balance against the Company of £18,169.

The revenue account shows that £743 had been received for passengers, £1,349 for goods traffic, and £27 for land account, making for the half-year ending 30th June last, £2,119. The expenditure amounted to £1,947, leaving a balance of £172.

The balance sheet shows a total of property and assets to the amount of £574,155, including £26,766 bad debts and £10,690 doubtful debts due to the Company, also 100,000 acres of land for which nothing is put down. The cash and securities amount to £8,441.

DIRECTORS.—Francis Edwards, Esq., 17, Eaton-place, and Pickerage House, Slough, Chairman; H. C. Chilton, Esq., Club Chambers, Regent street, and 25, Chancery-lane, Deputy Chairman; W. S. Featherstone, Esq., Cromwell House, Croydon, Surrey; Henry Maudslay, Esq., Cavendish-square; Sir Henry Muggeridge, St. Andrew's hill, Doctors' commons; Colonel G. Pollard, Stanmore Hall, Yorkshire; and Henry Wickham Esq., M. P. 3, Chapel-street, Park-lane.

A Mass of Copper Weighing 24 Tons Found.

The "big thing" at the Mesnard has proved a reality, having been exhumed during the present week, and visited by nearly every man in the district. Several other important discoveries have also been made in conjunction with it. The mass lies about two hundred feet south of the large exploring trench made some two years ago, and between the Albany and Boston, and what is known as the epidote-veins. But little of the mass was above the surface when discovered, and that little was so covered by moss and small underbrush as to hardly attract attention. Upon being uncovered, and the soil removed from around its sides, traces of Indian workings were found—pieces of charcoal, and half a dozen stone hammers were taken out, and the eastern end of the mass shows plainly that a portion had been broken off. The average dimensions are—length 15 feet 7 inches; width 8 feet 7 inches; it is full five feet in one place—thickness 1 foot 6 inches; giving 87,135 cubic feet. All these measurements are rather under than above the average. One measurement gave 120,000 cubic feet, but we consider the first figures the most reliable. They would give the weight of the mass as 23 tons, 1,924 lbs. There is but little vein rock attached to the block, yet there is sufficient to identify it as having come from the epidote lode. It also shows, by the sharp angles of the rock, that the mass has not been removed far from its original bed, and, of course it is natural to suppose it is not the only one to be found in the locality.—*Houghton (L. S.) Gazette Oct.* 11.

Danish Railways.

On the 3rd Oct. the King of Denmark was present at the inauguration of the railroad between the towns of Randers and Aarhus. This is the first portion of the network of railways that are in course of construction throughout the kingdom. His Majesty arrived at Aarhus in his steam yacht, and immediately afterwards, accompanied by Sir Morton Peto (who is the contractor for the whole of the works), and attended by the whole of his suite, proceeded along the railway. At Langen Station Sir Morton Peto had the honor of entertaining his Majesty at a magnificent collation. The King, in reply to the toast of his Majesty's health, which was received with immense enthusiasm, spoke in the warmest terms of the gratitude that was due by Denmark to Sir Morton Peto for the manner in which he was carying on the works for the prosperity of the kingdom. In the course of the afternoon the king conferred the order of the Danebrog upon Mr. Rowan, the resident representative of Sir Morton Peto in Denmark. The railroad is now open for traffic.

Steam and Water Gauges.

Among the useful articles on exhibition at the recent Fair of the Maryland Institute, we noticed the following which were deposited by Mr. R. C. Potts, of Baltimore street, who is the agent for their sale; Warren's Water Alarm Gauge, or Low Water Detector, for protecting the flues and preventing steam boiler explosions. This instrument is so arranged as to render it one of the best Water Guages ever attached to a steam boiler, always presenting to the engineer the exact height of the water; and if, by oversight or sudden leakage, the water gets low in the boiler it will cause an alarm by blowing a whistle, before the water gets below the flues, thereby preventing an explosion. Bates' Gravitating Steam Gauge—The index hand of this guage being actuated by gravity it remains perfectly steady whatever vibration the instrument may be subjected to, although the guage is an extremely sensitive one. He also exhibits a German Steam Gauge, which is perfectly reliable, and cheaper than many American guages.—*Balt. Am.*

American Railroad Journal.

Saturday, November 22, 1862.

Stock and Money Market.

The great event of the past week has been the taking of the loan recently called for by the Secretary of the Treasury, commonly known as the 7.30s, of which he had remaining undisposed $13,500,000. On Monday last bids were sent in to the amount of thirty millions or very nearly, and the fortunate parties were those who offered above 3.05 per cent, and they were more than 170 in number varying in their offers from $250, to upwards of four millions of dollars. The result was gratifying in the extreme, since it shows the confidence of the people and the capitalists as a body, in the wealth, resources, and stability of the Government. One of the surest pledges which men can give of their determination to support it, is the investment of their money in its securities. There seems to be a prevailing opinion that a new loan will be offered to the public, in consequence of the large amounts of money seeking investment, and the popularity of the loans themselves. Mr. Chase who is sincerely anxious to do his duty, and has been particularly advised and pressed by the hard-money financiers of New York to trust to loans entirely and not to demand notes, will probably follow their advice and come again into the market, and make his hay while the sun shines.

The preliminary step of the Secretary to borrow in Wall street in advance of the actual sale of the 7.30s has been criticised pretty severely. It occasioned a temporary rise in the interest of money,

(which the lenders did not object to,) and the calling in of loans payable on demand, which no doubt seriously affected a large class of weak operators, men who have margins but no bottom. No doubt the suddenness of the measure toppled over many houses of cards as has been alledged, and caused a considerable "scramble" in the neighborhood of Wall street, but we are of the opinion that the result was neither caused by *caprice* nor *vanity*, and no injury resulted to the public nor the best interests of the Government, as has been asserted.

In the first place, Mr. Chase was justified in making his preliminary loan at short notice, and to use the proceeds at once in order to save interest, as any other borrower would do under similar circumstances. In the next place the only parties who could be possibly injured by the suddenness of his movements, were those who were borrowers on call, and knowingly when they so borrow are aware of the risk they run by being called at any moment to pay up. It is a part of their contract made with their eyes wide open, and they have not a word to say. The U. S. Treasury can not wait till these borrowers secure their profits on their from-day-to-day speculations before it comes into market for the Government wants. This would be a pretty operation indeed. Reduced to plain English it would perhaps read something like this. "All those gentlemen who are now speculating in gold, stocks of the Rebel States, exchange, &c., are requested to get ready and pay up their loans on call so that they may lose nothing by their operations, and get out whole before the Government asks for money enough to pay off the troops now on their way to Richmond."

The parties who are said to have had the scramble to pay up their call loans, are the last persons who have the right to complain. They voluntarily take risks precisely such as occurred, their system of operations is financially unsound and injurious, they are the badgers of the market, the birds of ill omen who rise on bad rumors, and fall with success, who would rather trade in rebeldom than not trade at all, and who keep up by secret combinations the prices of Southern stocks, the proceeds of which very possibly go to Southern proprietors, and help to sustain this scandalous resistance to the Union. If the movement of Mr. Chase, necesssary, well-timed and triumphant, disturbed these gentlemen, we have no tears to shed over their troubles. No *bona fide* capitalists or patriotic banks had any scramble on their part; they offered three times as much money as the Secretary required, and now Mr. Cisco the Treasurer, to save any shifting of the money more than is necessary in the transaction, accepts checks on the banks in payment, where the preliminary loan was effected, and wipes out the Government indebtedness at a stroke of the pen, and without the least disturbance.

It is said that the Secretary of the Treasury might have issued his own Treasury notes of which he has power still to issue fifty millions, but he evidently desires not to put more paper on the country, than its business and wants will justify, and if he could, he would probably reduce rather than increase it. It is just this increase of paper money which gives Wall street its greatest power of speculation, and if thirteen millions of a new issue had been suddenly thrown on the public within fifteen days, these borrowers would have had a larger margin still, and gone in for more loans at call, in the hope they would never be disturbed. The Treasury notes are very properly held in reserve for an emergency, to be used when nothing else is to be had.

Mr. Chase is in constant communication with our most eminent bank managers, and solicits their advice. Those who have a deep-seated fear of the consequences of paper money, and certainly are sustained in their opinions by the weightiest authority as well as much experience, tell him, that he must borrow on long loans at the market price, and issue no more new demand notes, but use what currency he gets in, or receives for his loans. In this way by the course of events, we shall be able to return to specie payments in a year or two, and without any violent derangement of business. If not, then the country banks will go on enlarging their circulation, substituting their own notes for the legal tenders.

It is not for us to solve these difficulties. Whenever there is a crisis in money matters, speculation and philosophy start off together in search of truth but never find it. It will be our fortune no doubt, to get out of our difficulty with as little forethought as we got into it.

But let us inquire what is the real advantage of loans over Treasury notes, redeemable, or irredeemable for the present at least. If the Government goes into the market, and is to have no money but what it borrows on its bonds payable at a distant period, it is evident that its credit and its resources are entirely for the time, in the power of the few capitalists who have the money to lend, and who if their character is unchanged since 1812–'15 would probably give the Government sixty cents on the dollar for its securities. When these securities come to be paid by taxation in full, then the forty per cent. which the Government never received has to be paid by the people, and must come first and last out of their pockets. Capital comes out with its profits nearly doubled by the operation, and labor with a loss to an equal extent. Now it seems to us that any other mode of raising money is preferable to this. But above all, and before all, is the fact that a great war cannot be carried on with gold and silver only. It is utterly impossible. The very money which the Government would have to take in payment of its bonds would be paper, bank paper, of which the last war gave us an idea. The banks would be as unable to furnish gold and silver as the Government now is. Since then we must have paper, let us have that in which every man feels and has an interest, and to the payment of which at some time or other, he, his heirs, executors, and administrators are pledged forever. If a country has no resources, its banks can have none. In our revolution we had neither commerce nor taxation. In that of France there was the same return of *de bonis non*, from the collectors of the revenue, but we have a most active, profitable, and wide spread interchange of commodities, a soil of never-failing richness, an abundance of products that use up all the resources of transportation, and an average property to each individual which almost defies adversity.

Our manufacturing and agricultural products have increased in value in 20 years, from nine hundred millions, to three thousand six hundred millions, and our railway property is now valued at one thousand two hundred millions more. Any Government bill then has this security behind it, and no bank bill ever devised could find any such recourse against insolvency. Indeed all the circulation the banks now issue in most of the free States is based on this very credit of the Government, and is pledged by them for the redemption of their own issues. It is idle then to say that bank bills afford a better circulation and security than Treasury notes.

And now as regards the effect of an excessive circulation of paper. Is it not better when it is the necessity of war, that all classes should participate in its use, even at a theoretical and practical loss, than that it should be scarce or doled out to the Government by close-fisted and exacting capitalists. What is the difference with the most rigid construction we can give it, whether the tax payer has to pay back $1 to the Government creditor for sixty cents loaned it, or to pass from hand to hand a paper dollar at 31 cents discount in gold, except that it is an actual saving of 9 per cent. after all.

Even a paper currency adjusts itself to circumstances. If it gets too plentiful, prices go up, we admit that, but the ratio keeps about the same, there is an equality after all, and "nobody is hurt." This is the lesson of experience and the dictum of even the Bullionists. The real danger of an excessive paper currency is the tendency to excessive and foolish speculation. This is the evil in this money box of Pandora. But at present it is contended that the circulation of Government paper has not yet reached the point of saturation, and that the country can fairly sustain a much larger issue. If money is so much in excess, we should like to know why interest rose to seven per cent., last week, at the withdrawal from Wall st. of thirteen millions, only a tithe of the deposits there: why ten per cent. was paid the brokers for postage stamps, and eight per cent. for nickel cents, and why, too, on real estate security, money still rules at 7 per cent., and it is not very easy to get at that rate on the very best kind of property. We leave these questions to be answered by those who are able to do so.

We confess we are not.

It happens curiously that at this very moment of doubt and of controversy, there has appeared from the press a very remarkable pamphlet from the pen of Alexander B. Johnson, Esq., of Utica, on the subject of "the advanced value of gold, suspended specie payments, legal tender notes, taxation and National debt investigated impartially."

Mr. Johnson is well-known to have been a leading banker all his life, a gentleman of great intellectual ability, and a well-known writer on Finance.

At the close of a successful career he has come to many striking conclusions, and while we are not prepared to adopt without further reflection all his propositions, we must admit that most of them are absolutely incontrovertible. At this moment they are of peculiar importance, and we close this article with some extracts of the greatest appositeness, which are argued in *extenso* with much force, in the remaining part of his pamphlet:

ANALYTICAL SUMMARY OF A PORTION OF THE CONTENTS.

I. Government Loans increase a nation's capital to the amount of the loans.

II. The annual productiveness of the new capital over the annual taxes it occasions, determines the pecuniary benefit of the increase.

III. The interest paid customarily, in any locality, for the use of borrowed capital is governed by the customary productiveness of capital in the given locality; but must always be less than the productiveness; and as government can usually borrow at a less rate of interest than private persons, government loans constitute a more lucrative increase of a nation's capital than any increase by private borrowers.

IV. The interest paid for borrowed capital is borne only directly by the borrower, but indirectly by the public; and the benefit from the employment of borrowed capital is not limited to the borrower, but is shared by all persons connected, directly or indirectly, with the operations, proximate and remote, to which the borrowed capital is applied. The industrial pursuits of a country are usually limited by only the capital, natural and borrowed, possessed by the country.

V. Taxes are, on the contrary, impoverishing to a people to the extent that the taxes are imposed to defray the expenses of a war, or to provide a sinking fund for extinguishment of a national debt. Taxes, to the extent that they are necessary to pay interest on a national debt, are a necessary evil.

VI. The repudiation of a national debt, instead of pecuniarily benefiting a country, impoverishes it to the extent of the magnitude of the repudiated capital. The repudiation would injure every member of the community to the extent that the benefit from the debt derived to him annually in all his operations, direct and indirect, would exceed the amount he would save annually in taxation. No fallacy is more prevalent and false than that the larger a national debt, the greater is the motive for its repudiation. The converse of such an opinion is the truth. The public debt of Great Britain, the largest the world ever knew, constitutes the most instructive practical lesson of history, but one which mankind seem persistently determined to ignore, by fallaciously assimilating a national debt to the debt of a private individual, and thus disregarding the distinction between man who soon, by disease, age or wealth, abandonds the employment of capital, and a nation perennially young and vigorously employing all attainable capital.

VII. Why war, disbursements, when liquidated by the creation of a public debt, should increase a nation's capital is not obvious, but many persons who are drones in peace, become in war active producers of capital; even the destructiveness of war stimulates men to produce, in any given time, more capital than they produce during a like time in periods of peace. The conflagration of Moscow aroused a creative activity throughout Russia, that soon compensated for the destroyed capital, and has been in beneficial operation ever since. Men of invariable income, and men of no enterprise, who abstract themselves from all surrounding activities, are usually the only classes to whom a national debt is, by the taxes it creates, an unremunerative evil.

VIII. Legal tender notes being compulsorily receivable, as gold and silver, in payment of all debts, present and future, no limit can be assigned to the quantity of such notes for which an ultimate use equivalent to gold and silver will not constantly exist; the aggregate of the use being at all times greater probably in amount than the aggregate of the existing notes. The French revolutionary assignats, and our own revolutionary continental money became worthless by reason only of the uncommercial character of the people and the consequent non existence among them of a sufficient volume of indebtedness to serve as an adequate basis of the paper.

IX. The par value of legal tender notes is secured by the above principles irrespective of any promised ultimate payment of them by government; still gold and silver are become more valuable than the notes, because the notes, available for a specie use on any given day, exceed in quantity the amount required for the given daily use. To make any paper money equal in value to gold, the paper must possess a present use that it and gold can alone supply. The depreciation of legal tender notes, as compared with gold, is shared equally by bank notes, and with all present liquidatible bonds, mortgages, and other securities, and is therefore not invidiously peculiar to the legal tender notes; and the said equality of all kinds of paper money must continue as long as the notes remain a legal tender.

X. The belief is fallacious that the present possessor of paper money, legal tender notes included, is injured to the extent that the paper is less in present value than gold. Banks are almost the sole possessors of the gold of the country, and by their suspension of specie payments, they suddenly exclude the gold from all the accustomed uses therefor, and thus by a species of monopoly, produce an artificial scarcity of gold, and a consequent rise in its market value. Should all the wholesale holders of tea, coffee or sugar suspend, suddenly, the sale thereof, no person would be surprised at a sudden rise in the price of those articles. For these reasons, an advance in specie has always followed immediately every suspension of specie payments, and it would follow, were the suspension limited by agreement to a single week. The Dutch once had a monopoly of the country that produced nutmegs, and they are accused of having occasionally destroyed a portion of the annual crop, to enhance the price of the remainder; but banks improve on this scheme by only withholding the supply of gold, instead of destroying any part of it.

XI. The equivalence in value between paper and specie is, at all times only artificial. The equivalence is produced by limiting the creation of paper money to an amount that the specie which is procurable can liquidate. Independently of this artificial equivalence, paper money and specie are severally subject, in their relative value, to the common commercial principle of supply and demand; paper money being more valuable than gold when the supply of paper money is more deficient in quantity to the demand therefor, than the supply of gold; and so, vice versa, we may say of gold.

XII. When paper and gold are of an equal value to each other, money is not at all times of an invariable value,—indeed few commodities are more fluctuating in value than money. Gold and paper together obey the laws of supply and demand, as certainly gold and paper separately; and accordingly nothing is more common than to say, money is cheap or money is dear.

XIII. The measure of the cheapness of money is the advance in price of other commodities; and the measure of the dearness of money is the decline in price of other commodities.

XIV. The cheapness of money is consequent to its existence in temporary excess of the present uses therefor; and the dearness of money proceeds from an opposite condition. The permanent excess in quantity of money or any other object of value is unattainable, men ultimately conforming their operations therewith to the attainable quantity. The like may be said conversely of any permanent deficiency of any article. The disturbances in the price of any article are the natural means by which an equilibrium is produced between supply and demand.

XV. Legal tender notes are, in their effect, a forced loan without interest; but taxes are a forced gift, coupled with an injury in addition when the taxes are to diminish a national debt.

XVI. A sinking fund operates as a continuously increasing bonus to the owners of government stocks, at the expense of all other classes of persons; hence the owners of public stocks are the greatest advocates of a sinking fund, and the worst advisers thereon a government can consult.

XVII. A sinking fund created by taxation, injures every tax payer to not only the extent of his tax, but indirectly by the diminution of the national capital. A sinking fund differs in its economical effect from repudiation, by only cancelling a national debt at the expense of all tax payers, instead of cancelling it at the expense of fund holders alone.

XVIII. Whatever diminishes the uses of gold over paper money, legal tender notes, included, enhances the relative value of gold over paper money, and vice versa; hence paper money is not unfrequently more than equal in value to gold.

XIX. The policy and expediency considered of several proposed measures to lessen the existing difference in value between gold and legal tender notes: as for instance, the policy of restraining banks from issuing bank notes and of hoarding gold when the banks suspend payments, and the policy of allowing the exportation of specie.

XX. The policy and expediency considered of some existing measures; as for instance, the discrimination by government in favor of gold and against legal tender notes, in payment of import duties, and in payment of interest on the public debt; the first discrimination is a necessary consequence of the second, and is just what fund holders would have dictated had they possessed the ordering thereof; but just what the rest of community would have deprecated; every percentage of increase in the value of gold becoming a ratable increase in the tariff of duties at the expense of all consumers, and a ratable increase in the interest of the public debt, at the expense of all tax payers.

XXI. The payment of interest by the government on deposits of gold, increases the uses of gold and necessarily enhances its value. The measure is another legitimate consequence of the bonus given to fund holders in paying them their interest in gold; government having to procure gold by purchase or other enhancing expedients.

The following quotations are in addition to those given elsewhere in our columns, and comprise most of the sales effected during the past week throughout the country:

Union of Railway Lines in Canada West.

No one who has looked at the Railway system of Canada West, either in the Guide books, or with his own eyes on the spot, can have avoided noticing their entire dependence for success on the products of the North Western American States. For these the various routes having their termini on the Lakes or St. Lawrence are eagerly contending. We notice in the *London Railway Times* of October 26th, a very important proposition, one so interesting to our own Railways the Erie and the Central, that we think it worthy of notice. The article alluded to contains the following statements;

"There are two important American Railway Companies that can advantageously pass traffic through Canada, the New York Central and Erie. The former line and over the Great Western of Canada such a portion of traffic as suits their own convenience; the latter (the Erie) is practically denied the use of the Canadian route in consequence of the want of a good understanding between the Great Western and the Lake Huron. For the Erie traffic can only obtain access to the Great Western by running 70 miles over the Lake Huron. It is quite possible, indeed very probable, that if the Erie traffic were encouraged through Canada, the revenue of the Lake Huron would be immediately doubled, and that of the Great Western increased at least 25 per cent. The revenue of the Erie is now about £30,000 per week. Even the crumbs of such a traffic as this, which if proper facilities were given, might pass through Canada, would go far to ensure permanent prosperity to the Great Western and Lake Huron. In speaking of proper facilities we would just allude to the contemplated bridge at Buffalo, which if built, would connect the Erie and Lake Huron and consequently the Erie and Great Western of Canada through the Lake Huron. A bill has been passed authorising the City of Buffalo to guarantee six per cent interest for fourteen years on the cost of a bridge not exceeding £200,000. The town Council have agreed to give this guarantee to any bridge company that may be formed. A wealthy American Company are willing to contract for the erection of the bridge for a much less sum than £200,000.

What should hinder the immediate formation of a bridge company having the Erie President, Mr. Marsh as Chairman, the Great Western and Lake Huron Presidents as Vice Chairmen, and a few Directors from each of the three companies on the bridge board? In these times of cheap money both here and in America there should be no difficulty in raising the capital. These three companies should guarantee the 6 per cent interest in perpetuity, accepting the City guarantee for fourteen years. The guarantee would in all probability only be a matter of precaution, as the bridge tolls may be expected to exceed 6 per cent. The Lake Huron's steam ferry costs about £5,000 per annum. They would be glad to pay this rent for the more convenient access to the City (of Buffalo) afforded by a bridge. From Buffalo over this bridge to Detroit the distance would be about 230 miles, 160 on the Great Western and 70 on the Lake Huron, so the advantage of all this traffic going to Detroit by this route, would be double to the Great Western, as compared with the Lake Huron. In other words, out of every £100 taken, over £60 would belong to the Western. If the shareholders of the different companies understood these questions, there is little doubt some arrangement mutually advantageous might be made.

All American Railway traffic entering into and departing from Canada West, must enter and depart either at Goderich, Buffalo, Windsor, (Detroit) Sarnia or Niagara. Of these five ports the Great Western holds three; one (Sarnia) jointly with the Grand Trunk, the other two (Goderich and Buffalo,) belonging to the Lake Huron. Now a union of the Great Western and Lake Huron interests, would throw all these five ports, or gates by which Canada West is to be entered, into the hands of one company, Sarnia only being held jointly with the Grand Trunk. It would be of no consequence which way traffic bound for Buffalo entered Canada—whether as Goderich, Sarnia or Detroit, it must pass over the United railways. Then again as to the working expenses. Under one system there would be a considerable saving, probably equal to the entire working expenses o the Lake Huron at the present time. In estimating the probable results of a union between these two properties, we will assume the Great Western revenue now, at £8,000 per week; the Lake Huron at £2,000=£10,000. By admitting the Erie traffic over these lines, we believe the Lake Huron would be doubled, and the Western increased 50 per cent, but if the Western were only increased 25 per cent or £2,000 per week and the Lake Huron doubled we should have £14,000 instead of £10,000. Every week that these companies are estranged is considered equal to a loss of £4,000 per week."

The writer then proposes a method of bringing about the union, such as securing to the Lake Huron a net revenue of £100,000 per annum, or an incorporation of the two companies, giving one Great Western Share for two Lake Hurons.

The High Price of Coal.

The price of coal at the present time, on inquiry, will be found to be about 50 per cent. higher now than it was this time last year, and yet a much larger quantity has been brought to the city, over some of the roads, than up to this time last year. The reason given is that miners are scarce, which cannot be the case, when we take into consideration the above fact. 51,825 tons and 19 hundredweight were brought over one road last week, and previous to this 1,996,638 tons 13 hundredweight. During the same period last year, the business foots up to 1,458,774 tons and 9 hundredweight. Excess in favor of the present season, 589,684 tons and 3 hundredweight. The whole amount brought by the Schuykill Navigation during this year is 832,854 08, which shows a falling off, as compared with the amount last year, of 155,478 tons 11 hundredweight. The incease of the whole year amounts to 434,205 tons. Some of the retailers of coal have informed their customers that the high rates now asked is because mines are so scarce that the supply to the city is necessarily limited. The above statistics exhibit quiet a different state of things.—*Phila. News.*

☞ Mr. GEORGE R. PENDLETON, formerly with Mr. George R. Rainsford, of Exchange Place, has now opened an office at No. 39 William st., for the transaction of business in the buying and selling of stocks and bonds at the regular board.

Buffalo, New York and Erie Railroad.

The earnings of the Buffalo, New York and Erie Railroad Company for the year ending September 30, 1862, are as follows..... $822,637 52
Earnings same period 1860-'61..... 593,844 62

Increase..... $228,792 90

Progress of the Railway System.

It has been calculated that the railroads already constructed extend over a surface of 69,072 English miles in length, and have cost $5 571,631,078, or $80,663 per mile. These different lines are thus divided in various parts of the globe—viz. France 6,147 miles; Great Britain and her colonies 14,277 miles, of which 7,583 miles are in England and Wales, 1,486 miles in Scotland, and 1,364 miles in Ireland; the remainder are in India 1,408 miles, in Canada 1,826 miles, New Brunswick 175 miles, Nova Scotia 99 miles, Victoria 183 miles, New South Wales 125 miles, and the Cape of Good Hope 28 miles. Prussia has 6,151 miles of railway; Austria 3,165 miles; the other German States 3,288 miles; Spain 1,450 miles; Italy 1,400 miles; Russia 1,370 miles; Denmark 262 miles; Norway 63 miles; Sweden 288 miles; Belgium 955 miles; Holland 312 miles; Switzerland 600 miles; Portugal 80 miles; Turkey 80 miles; Egypt 204 miles; the Federal States of America 22,321 miles; the Confederate States 8,784 miles; Mexico 20 miles; Cuba 500 miles; New Granada 50 miles; the Brazils 111 miles; Paraguay 8 miles; Chili 194 miles; and Peru 50 miles.

Pacific Mail Steamship Company.

The financial condition of this company November 1, 1862, was as follows:

ASSETS.

Cash on hand, Loans and Investments		$1,907,562 89
Sxty-four thousand six hundred and eighty-eight tons of coal on hand, in transitu and contracted for, on which there has been paid		414,889 40
Nine steamers, valued at	$1,033,961 34	
Payments made on two steamers, building..	317,961 63	
		1,351,922 97
Store-Ships, Iron Boats and Scows..		67,117 00
Real Estate		186,500 00
Machinery at Benicia		50,000 00
Outfits and Supplies in the hands of agents and in transitu		197,170 57
Stock in North Atlantic Steamship Company (4-9 steamers, Atlantic and Baltic		155,555 55
Iron Lighter No. 1 (building)		1,000 00
Balance due from agents and pursers.		28,720 36
Total		$4,360,429 74

LIABILITIES.

Capital Stock	$4,000,000 00
Sundry unsettled accounts	5,344 00
Profit and loss, net earnings for the quarter ending Nov. 1, 1862	355,085 74
Total	$4,360,429 74

Exploration of the New Overland Mail Route.

Quite an important report has been made by Capt. John A. Thompson, of the Fourth Regular Cavalry, at Denver City, concerning the new route of the Overland Mail Company, and the spot chosen by him to erect a fort for the purpose of protecting travel against Indian depredations.

The site selected is on Elk Creek, on the northern side of Medicine Bow Mountain. It is equidistant from Denver and Fort Laramie, and at the passes in the mountains where all Indians have to go in crossing from North to South, and only 180 miles distant from each of the former places. The advantages of the position, as set forth by the Captain, are very numerous.

Grain Trade of Buffalo.

The eastern movement of Flour and Grain from the lake regions to and through Buffalo from the opening of navigation in the years 1859, 1860, and 1861, and from Jan. 1 to Nov. 1 in 1862 is shown by the following comparative imports by lake and exports by canal, viz:

IMPORTS FROM THE WEST INTO BUFFALO.

	Flour bbls.	Grain bush.	Grain, flour included, bu.
1862	2,300,036	51,423,874	62,924,054
1861	1,772,860	63,104,842	51,969,142
1860	953,720	25,069,032	30,837,632
1859	1,172,538	10,854,701	16,717,391
1858	1,349,083	18,603,033	25,438,448

EXPORTS BY CANAL.

	1861.	1862.
Flour bbls.	233,584	326,625
Wheat, bush.	18,794,540	23,221,948
Corn, bush	16,167,061	18,787,438
Oats, bush	1,598,486	1,950,119
Barley, bush	129,249	158,682
Rye, bush.	245,768	694,982
Total grain	36,935,104	44,813,169

The following will show the revenue collected from tolls at Buffalo from the opening of navigation to Nov. 1, 1860, as compared with the revenue for the corresponding period in 1861, viz;

Tolls, 1862	$2,665,623 23
Tolls, 1861	1,776,201 85
Increase	$889,421 38

New Cape May Railroad.

The railroad to Cape May will be in operation by the 1st of June next, and already such progress has been made as to assure parties of the safety of making arrangements for spending the whole summer at this favorite watering place. The work, too, has been done quietly.

The Camden and Amboy Railroad Company, who own the West Jersey Railroad to Bridgeton, contributed one hundred thousand dollars, and the Millville and Glassboro Railroad Company contributed another one hundred thousand dollars. The interest of these roads lies in the fact that their routes are now in successful operation to half the distance forty miles. The remaining forty miles is to be done with the subscriptions named above, and the additional subscriptions already made by the inhabitants of Cape May county and other parties interested in securing the construction of the road. The present scarcity of labor does not hinder the enterprise, for a sufficiency of hands can be procured on the line of the road. Already much has been done, and the work is progressing on ten different sections at the same moment. Much of the line of the road lies through fine white oak timber, affording an ample supply of ties, and on either side of the route, both along the sea side and bay side of the State, for thirty miles from Cape May, it is an almost continuous village, or made up of small and highly cultivated farms. The building of the road is under the direction of George B. Roberts, Esq.

Railroad Earnings--Monthly.

The earnings of the St. Louis, Alton and Terre Haute Railroad for Oct., 1862, were $118,887 26
Do., 1861 74,139 82
Increase $44,747 44

The earnings of the Erie Railway for Oct., 1862, were $910,985 22
Do., 1861 719,354 03
Increase $191,631 19

The receipts of the Norwich and Worcester Railroad for October, 1862, were $40,086 62
Do., 1861 35,493 70
Increase $4,592 92

The earnings of the Rome, Watertown and Ogdensburg R. R. in Oct., 1862, were $190,275 57
Do., 1861 149,432 83
Increase $40,842 74

The receipts of the Housatonic Railway Company for October, 1862, were $29,721 36
Do., 1861 23,835 60
Increase $5,885 76
Total to Oct. 31, 1862 $218,631 67
Total for same period, 1861 180,375 20
Increase $38,256 47

The approximate earnings of the Pittsburg, Fort Wayne and Chicago Railway during the month of October, compared with the same period last year, were as follows:

	1862.	1861.
Freights	$245,775 84	$206,261 27
Passengers	137,093 24	124,867 60
Express	2,659 14	2,905 25
Mails	7,825 00	7,825 00
Rent of railway	7,083 34	7,022 79
Miscellaneous	812 50	3,189 52
Total	$401,249 06	$352,071 43
Earnings, Jan'y 1, to September 30.	2,608,696 66	2,074,968 22
Total to Oct. 31	$3,009,945 72	$2,427,039 65

Increase for October, $49,177 63, or 14 per cent.; increase to Oct. 31, $582,906 07, or 24 per cent.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Nov. 7th, 1862, was as follows:

Passengers	$23,731 35
Freight and live stock	38,030 27
Mails and sundries	1,649 88
	$63,411 50
Corresponding week of last year	55,386 80
Increase	$8,024 70

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week in November, 1862, were $35,332 85
Do., 1861 35,187 20
Increase $145 56

The earnings of the St. Louis, Alton and Terre Haute Railroad for the 1st week in November, 1862, were $28,856 35
Do., 1861 16,167 11
Increase $12,689 24

The receipts of the Grand Trunk Railway of Canada for the week ending November 1, 1862, were:

Passengers	$20,364 57
Mails and sundries	5,466 10
Freight and live stock	70,385 89
Total	$96,216 56
Corresponding week of last year	102,294 09
Decrease	$6,077 53

The Chicago and Northwestern Railroad earned in the 1st week of November, 1862 $29,368 55
Corresponding period, 1861 19,089 86
Increase. $10,278 69

The Michigan Central Railroad earned in the 1st week of November, 1862 $72,677 59
Do., 1861 54,910 12
Increase $17,767 47

The Toledo and Wabash Railroad earned the 1st week of November, 1862 $37,691 67
Do., 1861 30,845 08
Increase $6,846 59

La Crosse and Milwaukie Railroad.

At a meeting of the La Crosse and Milwaukee Railroad bondholders, parties to an agreement made Oct. 3, 1861, held 6th inst., the following resolutions were unanimously adopted, altering and modifying the said agreement of Oct. 3, 1861:

Resolved, That the agreement made by us on the 3d day of October, 1861, in accordance with the written recommendation of six out of the seven Trustees therein named be, and hereby is, altered and modified in pursuance of the fourteenth section of said agreement, in the manner following viz:

1. That if the Company acquire the road of the Milwaukee and Western Railroad Company, commonly called the Watertown Road, then said mortgage may be for $2,000,000 additional.

And if the Company acquire the road of the Milwaukee and Horicon Railroad Company, then said mortgage may be for $400,000 additional.

2. And for the purpose of authorizing the bondholders to vote, the Company may issue Scrip Preferred Stock to the same amount that it issues Mortgage Bonds to accompany said bonds, and full paid Preferred Stock, and Common Stock to the amount heretofore provided in the agreement: and for the purpose of acquiring the Milwaukee and Horicon Railroad, they may issue $400,000 of full paid Preferred Stock, and $250,000 full paid Common Stock in addition to the amounts above provided.

3. That such of the holders of the Milwaukee and Horicon Railroad First Mortgage Bonds, a first lien on that road from Horicon to Berlin, as surrender their said bonds to the Trustees hereunder, shall receive new mortgage bonds of said new Company at par, for the principal of their bonds and preferred stock of said Company, for the interest due thereon up to Jan. 1, 1863.

4. That such of the holders of the City of Milwaukee Bonds issued to or in aid of the Milwaukee and Horicon Railroad Company, as shall surrender them to the Trustees hereunder, shall receive Preferred Stock of said new Company for the principal and interest of their bonds up to Jan. 1, 1863.

5. That the balance of the unappropriated Preferred Stock and Common Stock issued for the purchase of the Horicon Railroad may be used at the discretion of the said Trustees, in settlement of any liens on said consolidated property.

Proposed basis for recognizing the La Crosse and Milwaukee Railroad Company, the Milwaukee and Western Railroad Company (commonly called the Watertown Road), the Milwaukee and Horicon Railroad Company, under Amended Agreement of Oct. 3, 1861.

Sell the roads (except the Watertown Railroad) under decree of foreclosure.

Let them be purchased for the benefit of creditors assenting hereto, and assenting farm mortgage stockholders.

Form a new Company to be called the Milwaukee and St. Paul Railway Company.

This Company to make a new clean first mortgage over the consolidated property of the old companies of not exceeding..... ....$6.600,000
To issue Preferred Stock not exceeding. 3,400,000
To issue Common Stock..... 2,250,000

Cost of property (343 miles of R. R.).$12,250,000

Subdivisions among creditors of the old companies:

A Land Grant Bondholder, No. 1a1,991, to get new first mortgage bonds for principal at par..... ....$1,000
And for his interest on Preferred Stock.. 250

A Land Grant Bondholder, No. 1,992a3,950 of the $1,000 Bonds, and 1a100 of the $500, to get in Preferred Stock for principal and interest..... 400
In Common Stock..... 400

A First Mortgage Bondholder, Eastern Divison, will get new mortgage bonds for his principal, and cash for the interest due him.

A holder of City of Milwaukee Bonds issued to the La Crosse Railroad, will get new mortgage bonds for his principal, and cash for his interest.

A holder of City of Milwaukee Bonds issued to the Horicon Railroad, to get Preferred Stock for principal and interest up to Jan. 1, 1863.

A Second Mortgage Eastern Division Bondholder to get new first mortgage bonds for 80 per cent..... .... $800
And Preferred Stock for the balance due up to Sept. 1, 1862, say..... 480

A Horicon First Mortgage Bondholder to get for his principal a new mortgage bond..... 1,000
For his interest Preferred Stock, say.... 280

A Milwaukee and Minnesota Stockholder to get for his stock 20 per cent in new common stock.

A Helfenstein Mortgage Bondholder to get for principal and interest in common stock, 25 per cent.

A Farm Mortgage Stockholder or Bondholder to get, for the principal and interest, for the bond in common stock, 80 per cent.

OFFICE OF THE NEW YORK CENTRAL RAILROAD CO., ALBANY, November 1, 1862.

THE annual election for Directors of this Company and for three Inspectors of the next Election, will be held at the Office of the Company, in the city of Albany, on the second Wednesday (the tenth,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

ROBERT L. BANKS,
5t45 *Secretary.*

RAILROAD SPIKES.
500 TO 1,000 kegs 9-16 Railroad Spikes on hand, ready for immediate delivery, for sale by
NEW YORK RAILROAD CHAIR WORKS,
89 Maiden Lane.
Nov. 6th, 1862.

TO RAILROAD MEN.
A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.
Address—**Car Improvement Co., Box 3693, Post Office, New York.** 38tf

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000 and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued b the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

BOUGHT AND SOLD.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,
HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.
The Coupon Bonds are issued in ums of
$50, $100, $500 and $1,000.
The Registered Bonds in sums of
$50, $100, $500, $1,000 and $5,000.
Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.
This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.
Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

Challenge Air-tight
KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the LARGEST OVEN of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and and BROILS with unequalled facility and dispatch, and with extraordinary ECONOMY OF FUEL, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.

CUMBERLAND COAL.

THE BORDEN MINING COMPANY

ARE now prepared to fill orders and to make contracts for the season of 1862, for **CUMBERLAND COAL**, DELIVERABLE ON BOARD VESSEL AT **Baltimore, Md., Alexandria, Va.,** or **Georgetown, D. C.** Purchasers may rely upon the Coal proving equal in quality to that heretofore furnished.

The Company also have the pleasure of announcing that they have completed, after two years' labor, their shaft and machinery upon their new property in the VALLEY OF GEORGES CREEK, and are lifting from the very heart of the Coal Basin a superior and perfect article of **BITUMINOUS COAL,** remarkably free from impurities of every description, and possessing qualities peculiarly adapting it to Locomotive use, and to generating steam under all circumstances. This Coal will be known in market as **"BORDEN'S PIT COAL."**

Our Railroad friends, and others requiring a superior Coal, will find it to their interest to give this a trial before contracting elsewhere.

For prices and other information apply to

American Railroad Journal.

New York, Saturday, November 29, 1862.

☞ We have just received from our attentive Agent in London, Mr. ALGAR, copies of the Plans, Prospectus, Rules and Reports of the British Association for the relief, temporary and permanent, of the officers and other employees on the railways in the United Kingdom. The advantages of introducing a similar system in this Country are so apparent, that we shall give the subject our early attention, and commend it to the patronage of the railway companies and the parties in their employment.

Stamps.

The Commissioner of Internal Revenue reports the receipt of over two millions three hundred thousand dollars, as the product of stamp duties for a single week. This is the least felt, and easiest collected of any portion of the national tax. It is paid by a class of men of business to whom individually, the charge is not in the least burthensome.

We may therefore fairly calculate that in the course of the year, the tax will net over one hundred millions of dollars, forty millions more than a similar one produces in Great Britain. This shows the immense commercial activity of the North American people, and will give Congress an early opportunity of reducing the duty on tea, coffee and sugar, one of the most onerous, the people are now called on to pay.

Chicago and North Western Railway.

The earnings of this road for the seven months ending November 1, 1862, were:

Gold Mining---What should be done.

The days of nuggets have gone by, except in those regions where gold is as yet unprospected, but experience teaches that the surface contains but an inconsiderable proportion of the precious metals, compared with that found in the rocks and veins beneath. So that mining having gathered up all the superficial treasures which Nature in an apparently careless mood has scattered about, is forced to come under the general law of earning bread by the sweat of the brow. Still there is something fascinating in the pursuit of gold under the greatest difficulties. When found it is a direct acquisition, an absolute creation of immediate value, which has no service to perform for the State, or for commerce, or any body or any thing, before it goes into the pocket of the man who finds it. No bill of lading, no invoice, no certificate of origin, no swearing, (at least in a Custom House,) no valuations or permits, follow a piece of gold as they do a piece of goods, but master of all, it asks no permission for immediate use or employment.

There are some freshly discovered localities in Australia where nuggets are yet discovered on a large scale, and as there is a vast area of our gold bearing country on the Pacific yet to be examined, we may expect to hear of them again, but so long as we positively know that our deposits of gold and silver, even in the territory of Colorado are of exhaustless value and can be obtained by a regular system of mining, all we have to do is to regard mining as any other business, and to encourage every attempt to systematize it and make it regular; certain as anything in this world can be, that if properly conducted, it will pay. The yield of the gold mines of California, according to the valuable work of Mr. Hittell has been as follows:

1848....	$10,000,000
1849....	40,000,000
1850....	50,000,000
1851....	55,000,000
1852....	60,000,000
1853....	65,000,000
1854....	60,000,000
1855....	55,000,000
1856....	55,000,000
1857....	55,000,000
1858....	50,000,000
1859....	50,000,000
1860....	45,000,000
1861....	40,680,000
	$690,680,000

There are now in the State more than 6,000 miles of mining ditches, which cost fifteen millions of dollars, three hundred quartz mills with three thousand stamps and five hundred and nineteen arastras. These last are mills known as the "rude" and the improved, consisting of machines, something in the form of a tan bark mill, the wall enclosing it being of stone a foot high, the bottom paved, and heavy mullers fastened to the ends of arms which are secured in a central post, and dragged round by mule power. In these shallow cisterns or vats, the bottoms being paved, the ore is placed and ground to powder by the rolling or dragging motion of the mullers.

From careful examination and practical experience, the general indications of the gold deposits are now very well understood. Thus an experienced and scientific miner is able to judge with considerable accuracy where he may proceed to work with success.

For example, it is ascertained that he can hardly go amiss, if he attacks the great quartz vein, running along the Sierra Nevada, about sixty miles west of its summit, and extending along a

good portion of the length of the State. It is a received opinion, that though the operations in this quarter are on a most extensive scale, yet that the vein will in time yield more gold than "the present circulating currency of the world." "It is composed of solid white chrystallized quartz, while the side veins are of every variety of feature, varying to a light porous ore of iron, or soft, red, clay-like material." The finest, brightest, and most beautiful dust of gold is produced from these veins.

The principal auriferous districts are as follows:

The region of the Sacramento basin, half way up the western slope of the Sierra Nevada, forty miles wide and two hundred in length, and lying between latitudes 37° and 40′ longitudinally extending North-westerly and South South-easterly. The basin of the Shasta and Klamath rivers between 40° 30′ and 43° 30′, extending two hundred miles along the coast, and one hundred miles inland.

The valleys of the Walker, Carson, Kern, White, San Gabriel, Colorado and Gila Rivers, the Mono Lake, and the Esmeralda district about five miles square, situated in Calaveras County. The Coso district about ten miles square, two hundred miles South and East from Owen's Lake. Besides these, Arizona and the Colorado Territory proper are full of the precious metals, and the richest argentiferous district is at Washoe and is ten miles square. The ordinary cost of quarrying, crushing and amalgamating a ton of auriferous quartz is $6 per ton, and the yield is $18, thus giving an almost invariable profit of $12 per ton, but much more if it be rich in character. The annual profit of some of the best conducted companies is enormous. Two mills in Sierra County are known to pay over $180,000 per annum. In Nevada County eight millions are known to have been taken from one hill, a mile long and half a mile wide, at a place called Coyoteville. Every species of mining implement is now in use in California, each adapted to the necessity of the case, and in ingenious contrivance far superior to those anywhere else in use, in any part of the world. The hydraulic process has the pre-eminence however, over all others in preparing the work for the manipulations in the final process of extraction.

In the Colorado territory, most of the gold is found in connection with iron pyrites, and as this contains sulphur, it is found difficult to separate the gold by amalgamation in consequence. Not one half of the precious material is therefore fairly extracted, and the miners are seeking some new and cheap method of attaining their object. It is thought, if they will first submit the sulphuret to a great oven heat, the sulphur will be evaporated and expelled, and this difficulty obviated; as soon as coal is found in sufficient quantities, the expense of the operation will be greatly reduced.

What the country now wants, is a thorough system or code of mining, and especially for Arizona and Colorado, by which the miners may be intelligently and legally worked, on easy terms for the industrious citizen and emigrant, and access to the Eastern states by railways, to favor emigration and the transportation of abundant supplies. A railway to be a part of the Union Pacific, may be made to the Colorado mines with great facility, and at an expense not to exceed $20,000 per mile. There are parties ready to undertake the work at this figure, and whether we take more or less time for the whole line to the Pacific, this portion of it should be commenced at once.

The products of the latter territory have been more than four millions the last year, and this is equal in amount to the whole of our trade with quite a number of foreign countries, where we are at the expense of maintaining diplomatic service, while the charges of transportation by sea, are very considerable. We do not see why we should not bring our gold bearing regions within three days of Chicago and five of New York, even if it does cost five or six millions, not one half of the price of some of our railways now in successful operation. Every energy of the country and the people should now be turned westward. Our Atlantic coast has arrived at the extent of its present foreign facilities for trade and commerce. To make a moderate profit, the sea is ploughed by our keels, the winds are everywhere woold by our canvas. Why should we hesitate to get a more certain result, a larger profit, a new country of customers of our own blood and sinew, in short an exchange of our commodities for the wealth of our own soil, which require neither treaties, nor foreign ministers, nor armies, nor navies, nor Custom houses to secure to us.

Indianapolis, Pittsburgh and Cleveland Railroad.

The earnings of this road for the fiscal year ending December 31, 1861, were:

Earnings from passengers		$114,158 57
" freights	197,535 20	
" mail	12,750 00	
" express	7,369 18	
		$331,812 95
Expenses viz:		
Repairs of engines	$15,266 85	
" cars	15,846 59	
" road	36,008 06	
" structures, etc	7,054 15	
Train expenses	30,854 80	
Depots and stations	11,658 51	
Wood	21,615 92	
Salaries and office expenses	6,612 43	
Loss and damage	2,397 14	
Oil and waste	1,965 11	
All other expense	16,594 77	
	165,874 33	
Net earnings		$165,938 62
Interest on bonds	$94,762 50	
Taxes	8,669 15	
Interest and cost of floating debt	3,432 66	
Expenses of extending 1st mortgage bonds	5,372 50	
	112,236 81	
Surplus		$53,701 81
Compared with the previous year the earnings show an increase of		$58,860 88
With an increase in expenses of	7,667 45	
Making the increase in net earnings		$46,193 43

The excess of through over local travel and freights has been $92,085 27. The working expenses are a fraction under 50 per cent. of the gross income, against 58 per cent. in 1860.

No important changes have been made in the stock and bond account. The extension of the 1st mortgage bonds is nearly completed, and only three of the income bonds remain unconverted into 2d mortgages. The floating debt of the company is entirely liquidated, except the overdue domestic bonds, amounting to $32,400.

The track is in good condition. The repairs of the year have been fully up to the depreciation. The bridges are in good order. A large amount of work has been done in replacing wooden with stone abutments and culverts. The side tracks, which were originally laid with flat bar iron, require renewal. The buildings also require renewals. The engine house and shops at Indianapolis will have to be rebuilt, and several station houses repaired.

The company have purchased about 25 acres of land on the east side of the city of Indianapolis, and contemplate removing thither the shops and freight yards during the present and ensuing years. These improvements will involve an expense of forty or fifty thousand dollars.

The following is the General Balance Sheet for the year ending December 31, 1861—

ASSETS.

Cost of road and equipment		$1,838,478 29
Lands and lots		47,186 45
Bills receivable		26,285 96
Stock of C., P. & I. R. R. Co		10,000 00
Sinking Fund		84,000 00
Due from other roads		8,025 53
" individuals		1,170 82
Materials on hand		11,034 41
Sinking fund, notes, etc., in hands of agents		4,330 91
Executive committee		50,381 56
New grounds, etc., at Indianapolis		1,652 14
		$2,082,545 57

LIABILITIES.

Capital stock	$835,971 26
1st mortgage bonds	649,000 00
2d " "	314,000 00
Domestic "	32,400 00
Income "	27,000 00
Bills payable	11,065 87
Surplus earnings	189,069 41
Interest and discount on bonds	17,205 50
Unpaid taxes	3,304 15
" dividends	757 54
Due other roads	403 85
Trustee of sinking fund	336 66
Individual accounts	1,973 77
Cash	57 56
	$2,082,545 57

The office of the company is at Indianapolis, Ia. The officers and directors are—

President—THOMAS A. MORRIS.

Directors—John Brough, Simon Yandes, T. A. Morris, J. M. Townsend, E. J. Peck, E. King, M. G. Walker, A. Makepeace, D. Kilgore, S. P. Anthony, D. Heaston, S. Witt, Henry Wick, A. B. Stone, James H. Godman.

Secretary and Treasurer—EDWARD KING.

Colorado Territory.

This mining territory has now a population of between 35 and 40,000 inhabitants. It was erected out of portions of Kansas, Nebraska, Utah and New Mexico. It has a good judiciary and about forty lawyers. The wares and merchandize brought into the territory come by way of Omeha. The farmers have raised this year good crops of wheat, rye, barley, oats, corn and potatoes, chiefly without irrigation. Flouring mills are much wanted.

The gold product for the fiscal year ending 30th of June last, reached four millions. For the ensuing year the product is estimated at six millions. Mining is assuming a regular system, and two hundred mills are employed in crushing the ore. Most of the gold product of Colorado is

taken from iron pyrites, and is of difficult extraction, only one half its gold being obtained from its ores at present. It is to be hoped that this loss may be prevented by some new process.

So large is the present business of the territory, that it is thought a railway to it, from the Missouri, would pay even if it went no farther.

☞ The transfer books of the New York Central Railroad will be closed at the close of business on the 3d of December, preparatory to the election for Directors on the 10th, and will be re-opened on the 11th.

Cleveland, Columbus and Cincinnati Railroad.

The earnings of this road for the year ending December 31, 1861, are as follows:

From passengers	$370,019 53
" freight	737,412 59
" express	22,943 67
" mails	29,100 00
" rents	84,127 50
" other roads for use of cars	14,868 31
" interest on deposits, etc.	5,781 94
	$1,263,253 54

Expenses for operating the road:

Transportation expenses	$200,845 44	
General "	19,540 93	
Repairs of track	138,130 62	
" locomotives	41,171 96	
" cars	42,388 47	
" buildings, etc.	24,035 84	
Fuel account	50,047 71	
Oil and waste	6,164 97	
Damages, gratuities, etc.	7,547 38	
Telegraph lines	5,131 88	
		535,005 26
Net earnings, (57.65 per cent		$728,248 34
Taxes for the year	$23,430 07	
Interest and exchange	22,350 99	
		45,781 96
Balance, (54.03 per cent		$682,466 38
Dividends July 1, 1861, and Feb. 1, 1862, 5 per cent. each		474,620 00
Surplus		$207,846 38

The increase of gross earnings over those of the previous year has been $177,454 14; of working expenditures, $51,484 91; and of net earnings, $125,969 23.

The increase and decrease in the several items of expenditure is as follows:

	Increase.	Decrease.
Repairs of track	$53,778 68	
Transportatation exp.		$3,240 74
Fuel	2,013 02	
General expenses		3,604 49
Repairs of freight cars	5,529 17	
" pass. "		4,823 55
" buildings	6,576 33	
" Locomotives		5,963 11
" Bridges		2,920 75
" fences	4,150 12	
Oil and waste		1,930 72
Telegraph	3,040 06	
Loss and damage		2,119 11
	$75,087 38	$24,602 47

The renewals to the track were large, as shown by the following items, which mainly make up the account: 2,307 tons rails re-rolled; 15,302 rails repaired; 65,000 cross-ties; 6,000 joint fastenings; 10,000 joint chairs; 526 kegs spike. In addition to the above, about 600 tons of new rails were laid in the track, the cost of which is included in the general account.

No new engines or passenger cars have been added to the equipment. Forty new house cars have been added during the year, five of which were built in the company's shop, and 37 gravel cars altered to platform and stock cars. The equipment of the road on the 31st of December stood as follows: 22 locomotives; 31 passenger 335 house freight, 112 stock, and 81 platform cars One locomotive has been changed to a coal burner and is working with economy and success.

The mileage in the various branches of the service has been as follows: passenger 231,489, freight 347,057, fuel 24,470, gravelling, etc. 20,489, switching 83,655—total, 707,160: an increase over 1860 of 51,998 miles. Cost per mile run for repairs, 5.82 cents; do., for fuel 7 cents; do., for oil, waste and tallow 0.40 cent. Miles run to one pint of oil, 32.32.

A new House Truss Bridge was built over the Black Fork, near Selby, and one of the same kind over the Sandusky at Crestline.

The Telegraph line from Iberia station to Cleveland, 86 miles, has been rebuilt with new cedar and white oak poles. The line is now in complete order, and will compare favorably with any other in the country.

The total number of passengers carried, not including troops, was 180,490, of which 140,006 were way passengers. The amount received for the transportation of soldiers was $76,425 93. Tons of freight carried, 416,756: tons carried one mile, 39,455,187.

The company have purchased that part of the Springfield, Mount Vernon and Pittsburgh railroad, extending from Springfield to a junction with their road at Delaware, about 49 miles, together with all the rolling stock, machinery, etc., for $184,000, which sum was paid in cash on the 20th of January last out of the surplus earnings of the road.

The assets and liabilities of the company on the 1st of January, 1862, were as follows:

ASSETS.

Roads and depots	$4,030,736 81
Equipment	637,215 89
Real estate	26,124 87
Steamboat stock—valued at	6,414 23
Loan to Cleveland & Mahoning R. R.	24,000 00
Stock and bonds of other companies.	523,152 16
Materials and fuel on hand	120,391 43
Bills receivable	40,755 74
Paid on account of purchase of S. Mt. V. & P. Railroad	10,000 00
Due from Railroad companies, etc.	53,357 55
Cash	445,210 27
	$5,917,358 95

LIABILITIES.

Capital stock	$4,746,200 00
Mortgage bonds	510,000 00
Dividends unpaid	279 53
Dividend Feb. 1, 1862	237,310 00
Due Railroad Companies	6,743 63
Surplus earnings undivided	416,825 79
	$5,917,358 95

The office of the company is at Cleveland, Ohio. The officers and directors are:

President—L. M. Hubby.

Directors—John M. Woolsey, David Dows, E. S. Prosser, H. Williams, John Miller, Amasa Stone, Jr., S. Witt, S. Williamson, M. B. Scott, J. Perkins, L. M. Hubby.

Superintendent—E. S. Flint.

Secretary—George H. Russell.

Treasurer—T. P. Handy.

Riding in Exposed Positions—Carelessness of Travellers.

PASSENGERS RIDING IN EXPOSED POSITIONS ASSUME THE RISK OF INJURIES ARISING FROM THE NEGLIGENCE OF DRIVERS OF OTHER VEHICLES, OVER WHOM THE CARRIER HAS NO CONTROL.

The defendant was the Brooklyn City Railroad Company, using at the time of the accident out of which the action arose, a stage sleigh for the purpose of transporting its passengers; it being then winter, and their track blocked up with snow and ice. The plaintiff took passage on one of their sleighs to be conveyed from the corner of Bond and Fulton streets, through Fulton to Orange street. While standing on the left guard or fender of the sleigh, he was injured by a blow given to him by a coal sleigh which was in the act of passing the defendant's sleigh. The defendant's driver was driving their sleigh on the right side of the street, his horses moving slowly, and tried to avoid the collision. The coal sleigh which was driven very fast, slid down sideways, broke the rails and the stanchions of the stage sleigh close up to the body, knocked the plaintiff off from the defendant's sleigh, and mashed him in towards the defendant's sleigh body, causing the injuries. The plaintiff commenced this action against the company to recover damages for the injuries so received.

At the trial, after the above facts were proved, the defendant moved to dismiss the complaint. The plaintiff opposed the motion and requested the court to submit five several questions to the jury; viz: 1st. Whether the defendant's were not guilty of negligence in constructing these foot-boards, on which they carried passengers, without constructing guards for the foot-boards? 2d. Whether these foot-boards were not placed on their sleighs for the purpose of conveying passengers, and whether they were not unsafe for that purpose? 3d. Whether the plaintiff was not invited by the defendants to take the place on the sleigh where he stood at the time of the collision? 4th. Whether the plaintiff was himself guilty of any negligence in placing himself where he stood when injured? 5th. Whether the defendant might not have avoided the collision by care and skill at the point of the accident, and whether the injury was not occasioned by their negligence and that of their driver, in not avoiding the collision?

The complaint was then dismissed by the Court, and the plaintiff appealed to the Kings General Term of the N. Y. Supreme Court; which Court now affirms the judgment of the Court below.

The following is the opinion of the General Term.

Emott, J.—We are of opinion that this case was devoid of any evidence imputing negligence to the driver of the sleigh in which the plaintiff was riding. He was driving slowly and cautiously and turning out of the way of the sled which came in collision with him. It was the reckless approach and the sudden turn and swing of the latter which brought the two together, and for this the defendant was not to blame. The judge correctly refused to submit to the jury whether the driver of the defendant's sleigh was guilty of negligence, or whether he might not have avoided the collision. It is possibie, that if he had foreseen the conduct of the driver of the coal sled which was approaching him, he might have avoid-

ed a collision, because he might have driven his own sleigh into such a place or position that it would have been beyond the reach of that, or of any passing vehicle. But this he was not bound to do. He was bound to exert the utmost skill and care to avoid the ordinary dangers of the road, but not to foresee or guard against the wilful misconduct, or the gross negligence of others, except so far as he could do so, after he was aware of the course they were pursuing. The evidence shows very plainly the character and purpose of the part of the sleigh upon which the plaintiff was riding. It was a projecting fender, intended to protect the body and runners of the vehicle in case of contact with other objects. The most that can be said, or that a jury could have found in respect to the use of these fenders for the conveyance of passengers, would be, that they were made of broad boards instead of rails, so that when the sleigh was full inside, persons could stand upon them, and that under such circumstances fare was collected from persons riding there. I do not say that this evidence satisfies me that these fenders were made for such a purpose; quite the contrary. But at most, the evidence could only prove what I have stated. Then the question would arise, whether the defendants are liable because they permitted a part of their vehicle to be used for conveying passengers which was exposed to danger, from the carelessness of others. That the defendants were bound to furnish a safe and roadworthy vehicle, is undeniable; but that means roadworthy for its own proper use. If in the ordinary passage through the street, without encountering carelessness or misconduct on the part of other vehicles, these foot-boards were insecure; if the plaintiff had been injured because he was riding upon them, without the negligence or misconduct of any other person or vehicle, the case would be different. But the responsibility of a carrier does not extend to provide a vehicle which shall be secure against the misconduct of others, he himself being free from blame in all other respects.

It is conceding too much, however, to say, that upon this evidence the jury could have found in the terms of the proposition submitted to the judge at the trial, that fenders were placed on this sleigh for the purpose of conveying passengers. If they were not placed upon the sleigh expressly for the purpose, it was the plainest negligence in the plaintiff, to occupy a position upon them, contributing as this did so materially to his injury. In the case of Willis *vs.* the Long Island Railroad Co., which was cited on the argument I said; "The essential element of negligence in such a case is a disregard of some risk which the passenger ought to anticipate." "A passenger is not bound to anticipate a collision, or that the train will be thrown from the track. He has a right to expect that he will be carried safely; that the carrier will discharge his duty; will provide a safe vehicle an unobstructed track, and that the passengers will be exposed to no risk, but those incident to that mode of travel. It is not, in my own judgment, negligence in a passenger to occupy a position which will involve increased risk to him of the consequence of negligence and misconduct of the carrier." "He cannot be charged with neglect for omitting to provide against the possible consequences of the misconduct of the carrier." It was very strenuously insisted, that these and other expressions of that opinion, and the rules laid down in that case, are inconsistent with the rulings at the trial of the present case. The inference is sought to be drawn, that it was no more negligent for the present plaintiff to ride upon the fender of a sleigh, than it was for the plaintiff in the case referred to, to ride upon the platform of a railroad car. But it must be considered, that in the case of a railroad train, there can hardly be said to be any risks that are not incident to and inseparable from, the mode of transportation; except such as result from the negligence and misconduct of the carrier; at least none other were considered in the case referred to. The carriers, the railroad company, have exclusive control not only of the vehicle and the motive power, but the road itself, and all the vehicles moving upon it. A collision with another vehicle if it occur, must be the result of the action of independent agents. The principle enunciated in the case of Willis *vs.* the Long Island Railroad Co., was, that a passenger was not bound to anticipate nor to protect himself against the consequences of the misconduct of the carrier. The risk of such misconduct—the risk of an insufficient vehicle which may break down, or its unskilful management which may destroy it—he is not to assume to be incident to travel by that conveyance. So in the case of a railroad the danger of the existence of obstructions or imperfections of the track, or the mismanagement of other cars or trains upon the same road, which are in fact all a part of the same conveyance, is not a risk which a traveler must consider incident to the mode of conveyance. But in the case of travel upon an ordinary highway, especially when the highway is a crowded city street, every prudent man knows that he is to meet numerous vehicles, the conduct of which no one but their owners or drivers control. The carrier who is transporting him cannot control, and is under no obligation for their behavior; and their possible negligence or misconduct is a risk which the passenger cannot cast upon the carrier, but must as far as the latter is concerned, take upon himself. If therefore a passenger in a vehicle upon a city street, voluntarily assumes a position which is not that intended and ordinarily used for his conveyance, and which is exposed to danger from such misconduct, he himself contributes to an injury which he sustains by a collision produced by the wilful or negligent acts of a third party without any fault in the management of the vehicle which carries him. Under such circumstances the rule is well established that he cannot recover against the carrier.

Judgment affirmed.

Gold Mining in Wales.

Gold is now found in quantities in Merionethshire, Wales. The rocks in which it is found are of the Cambrian and Lower Silurian series, cut through by porphorytic green stone in narrow banks. One mine had in it 20 strong metalliferous lodes. One very remarkable junction of about 14 lodes is 40 feet wide, and the whole of this mass of lode stuff contains more or less gold. A large number of assays recently made gave from 3 to 19 dwts. of gold to the ton of quartz. Picked specimens gave as much as 16 ounces to the ton, and more than 700 ounces of gold were taken from about 300 tons of minerals from all parts of the mine. Mr. Readwin an eminent British authority said that by the use of proper machinery there could be no doubt whatever of an average of 8 or 10 dwts. of gold to the ton, paying a large profit, and thus opening a branch of industry of vast importance to the country. He has a bar of gold weighing 37 ounces obtained from the quartz in one of the mines, and several articles of jewellery made from pure Merionethshire gold.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Nov. 14, 1862, was as follows:

Passengers	$22,051 00
Freight and live stock	45,905 81
Mails and sundries	1,486 30
	$69,443 11
Corresponding week of last year	51,407 03
Increase	$18,036 08

The receipts of the Grand Trunk Railway of Canada for the week ending November 8, 1862, were:

Passengers	$23,058 67
Mails and sundries	4,113 30
Freight and live stock	72,350 56
Total	$99,522 53
Corresponding week of last year	97,961 35
Increase	$1,561 18

The Toledo and Wabash Railroad earned the

2d week of November, 1862	$38,695 48
Do., 1861	32,325 55
Increase	$6,369 93

The earnings of the Illinois Central Railroad

for the 2d week in Nov., 1862, were	$107,014 08
Do., 1861	62,067 65
Increase	$44,946 43

The Michigan Central Railroad earned in the

2d week of November, 1862	$76,321 09
Do., 1861	61,167 30
Increase	$15,153 79

The Chicago and Northwestern Railroad earned

in the 2d week of November, 1862	$26,596 43
Corresponding period, 1861	18,182 89
Increase	$8,413 54
Increased earnings in two weeks, nearly	19,000 00

The earnings of the Chicago and Alton Railroad for the 2d week in November, 1862,

were	$30,817 98
Do., 1861	24,286 19
Increase	$6,531 79

The Galena and Chicago Railroad earned the

2d week in November, 1862	$40,870 00
Do., 1861	49,031 00
Decrease	$8,161 00

The Cleveland and Toledo Railroad earned the

2d week of November, 1862	$28,181 00
Do., 1861	20,375 00
Increase	$7,806 00

The earnings of the St. Louis, Alton and Terre Haute Railroad for the second week of November,

1862, were	$27,727 87
Do., 1861	16,030 81
Increase	$11,697 06

RAILROAD EARNINGS—MONTHLY.

	January.	February.	March.	April.	May.	June.	July.	August.	September.	October.	November.	December.	Total.

American Railroad Journal.

Saturday, November 29, 1862.

Stock and Money Market.

The past week has been one of great excitement, in consequence of the supposed effects, resulting from the recent transactions of the Government in this market. Although the loan of the Secretary of the Treasury was promptly effected, and produced a profit of 3.05 per cent, yet a stringency followed in the Money Market, real or pretended, and from certain quarters where a pinch or a scramble as it was called took place, quite a clamor arose against Mr. Chase, paper money and our whole financial system. The views of money operators generally conform to their interests, and we therefore adopt the opinion of Mr. A. B. Johnson of Utica, in his recent admirable pamphlet on finance, that in some cases the advice of capitalists is the worst a Government can follow. Let us calmly consider the condition of our public affairs.

We are engaged in repressing the greatest rebellion known since that of the fallen angels themselves. History records none, since nations and governments were established on this globe, to equal that which calls forth to-day the energies and resources of the loyal States of this Union. More than a million and a half of men are in the field with arms in their hands to destroy each other, and the greatest republic in all time is now at the crisis of success or ruin. Men who reduce this great and overwhelming struggle to a consideration of a premium on gold, belong to the class of fossils, buried in the time of the flood, and are

unable to comprehend the new state of things in which they happen to have been uncovered.

They who propose to make the political existence of this country to depend on the questions raised by mere dealers in money, do not understand what there is at stake, nor how to preserve that which is in danger. We reject therefore, *ex necessitate rerum* all subordinate discussions, not based on the great principle of preserving the National life, and this must be the guide of our statesmen in treating of the methods of preservation.

Again and again we have repeated the assertion, that no such war as that in which we are engaged, can be carried on with gold and silver only. We have never had enough in the whole country to pay our war expenses for six months, and when once disbursed it would from natural causes, disappear from circulation. Paper then becomes indispensable, and as it is a well-known commercial agent, its use is familiar and convenient. Shall this paper be issued by the Government, or shall that issued by banking associations owned by individuals, conducted for private advantage solely, and depending for ultimate redemption on their good faith and success in business, proved often times to be a failure even in an ordinary commercial crisis, known to have been an unstable reliance in war, and to be a source of distrust and apprehension among its holders when ever a broker discredits it at his counter, every where out of its locality at a discount, and in distant parts of the country without any credit at all, shall this kind of paper be used by the Government in conducting such a war as this? Would our soldiers be content to be paid in Virginia or Louisiana, with bank notes issued in John Brown's tract?

Certainly not. The best currency which can be devised therefore, is that which is based on the whole resources of the State, on the property of those who stay at home, and of those who are actually in the field, a currency which is at legal par everywhere, and meets every legal obligation. There can be no doubt of the correctness of this position.

But it may be said it is issued in excess, and an excessive supply of paper, as even of gold, which has occurred twice in Modern history, enhances the price of those articles for which it is exchanged. Admitted, but have we arrived at that stage, and if we should even arrive at it, is the war then to stop and the Union to be severed, or are we to persevere at all risks and hazards, establish our permanence, and then revise our financial system and place it on the peace basis, from which it has been driven by the cruel necessities of this unnatural outbreak.

It is worthy of note that but a few weeks since the press of this city, or that portion of it which with large experience and much regard for the old and venerable laws of currency, has contended that the Government might carry on the war, by resorting to loans, to be put out at the market price, and issuing the paper of the local banks received from the purchasers of its bonds. The objection to this course is manifestly that the bonds would go down probably to 50 per cent, and the bank paper put in circulation therein would also depreciate enormously, and probably be refused by the soldiers themselves, if operating in the Southern States. In short there would practically be no currency at all in which the public could place confidence, and to conduct a Government and a war, requiring millions a week on such a basis, would be totally impossible. There would be a chaos in property, responsibility and business. We have had a slight instance in this direction already. When the 13 and ½ million Treasury sale of 7.30s took place, it was found that there was not currency enough in the banks of the city to pay into the Sub-Treasury the amount drawn for by their own depositors!! Absolutely the banks had no funds so disposable, except their specie. It was stated at least, in one of the very journals which is continually assailing Mr. Chase, that some of these institutions were so cramped by their inability to meet the checks of their depositors, that they might have been declared suspended and forced into liquidation. We think after this, the bank managers have not another word to say to Mr. Chase, or to Mr. Anybody about paper currency. They have shown themselves that in such emergencies as these, they would be broken reeds if the Government was solely to depend on them for its daily wants. On the contrary, we also notice, that since this *fiasco* in Wall street, the journals in question have come to the conclusion that more legal tender notes will be necessary not only for the war, but to carry on the active business of the country: and we will add to enable the banks themselves to redeem their circulation of sixty millions now afloat in this State. If the loans are called in and the discounted paper paid up, which the local banks have been amusing themselves with, in creating to an enormous extent since the suspension of specie payments, it is clear there must be some decent currency with which to retire this indebtedness at maturity. The borrowers on call in Wall street found the difficulty in their own case the other day, and nothing but currency saved many of them from violent attacks of lameness.

The truth is, the United States legal tender notes are the most convenient and popular currency we ever had in this country. They are actually hoarded as much as gold and silver, they bear even now a slight premium, while the postal stamps are not to be had at the Brokers under from 4 to 6 per cent, the range within the last two weeks. We are driven to the conclusion therefore, that a further issue of Treasury legal tender notes is one of the absolute and indefeasible conditions of a restoration of the Union; that when restored these notes will become the universal currency even in the Southern States, that the commerce and business of the country will sustain five hundred millions of Government paper, and that its circulation will add one hundred millions per annum to the earnings and resources of the industry of the people, that if it is found in excess, this will be cured by investment in bonds paying 5 or 6 per cent. the interest in gold, and that the adjustment of values and exchanges will be regularly carried on, and may be foreseen and guarded against.

There are at this moment but two real causes for gold's bearing a premium. One, the demand for that article which will easiest pay foreign indebtedness beyond the amount of our exports; the other to pay the interest on the government loans. Beyond these two, we see no other immediate causes. If our importers choose to buy goods, for gold, let them do so. This is their business; many of those they import are not in the least a necessity to our comfort or convenience. The price of exchange is in fact in the power of the consumers. Let them cease to buy superfluities from abroad, and gold will not long be so dear.

To conclude, whatever evils or disadvantages there may be in paper currency, it is certain it is our own national salvation at present, that it like all other evils in this world brings some compensations with it, and in this case, these are to be our final triumph over rebellion, the reconstruction of the National Edifice on even more solid foundation than ever, a balance of power due, justly due, to the Western world, and a prosperity unknown before by any people on the globe.

The following reported sales are in addition to the daily quotations given elsewhere in our columns:

Erie Railway Time Tables.

We have received from Mr. Minot, the Superintendent of the Erie Road, printed copies of the Time tables, by which the numerous trains on the main line and branches are run and regulated. They are very minute and perfectly intelligible, and it would seem almost impossible for any accidents to occur by the collisions of trains, if these tables are faithfully followed.

Indeed there are but few if any occurrences of this kind on the road, and considering its great extent and enormous business, it must be well managed.

The public may be assured, (yes and even the

humblest passenger,) that entire security is particularly studied by the experienced Superintendent.

Chicago and North Western Railroad.

The formal opening of this road to Green Bay, took place on the 13th inst. The following description of the line is from the Chicago *Tribune*. It says—

The line for the first hundred miles, reaching to Milton Junction—runs through one of the richest and most beautiful sections of the West. Scattered along the line, like gems upon a necklace, are a large number of prosperous villages, whose thrifty appearance gives assurance of the highly productive country by which they are surrounded. Janesville, on Rock River, is one of the largest and most beautiful inland cities of the West.

North of Milton Junction, the road, for some sixty or eighty miles, follows up the valley of Rock River. In the immediate vicinity of the road the country is heavily timbered, and to the eye not so inviting as the first section of the route. But the fine cities of Fort Atkinson, Jefferson and Watertown are the outgrowth of the rich farming country that lies at a little distance on each side from the river valley. After leaving Rock River, the road penetrates the magnificent prairies that surround the beautiful city of Fond du Lac. Then it skirts along the western shore of Lake Winnebago, crossing Fox River at Oshkosh, one of the largest lumber marts in the State. No section of the West produces finer wheat than the country about Fond du Lac and Oshkosh. North of the latter city, passing through Appleton where are located some of the most prosperous and best endowed educational institutions of the West, the road follows down the west bank of the Fox, reaching the head of Green Bay, 242 miles from Chicago, at the city which bears its name.

But while the road runs through a rich and rapidly developing country, it is, if possible, still more important with reference to the trade and travel which it will receive from the country beyond its present terminus. It will control all the winter trade and travel to Lake Superior, and a large share of both during the summer. As soon as spring opens, a line of stages will run regularly across the peninsula, in connection with a steamer on Green Bay from Little Bay du Noquet to Marquette on Lake Superior, The distance is only fifty-five miles. A party of engineers are now surveying the route for a railway, and it is believed that within a year the road will be finished. Capitalists largely connected with the iron interest have taken hold of the work. They have abundant means, and it is believed they can make it pay a handsome profit on the investment. A railway is already built from Marquette to the mines, and it requires but forty-seven miles more to connect it with Green Bay. It has always been found difficult to get vessels enough to Lake Superior to carry off the product of the mines; but it is believed that it will be different if the road is completed south to Green Bay. The Lake Superior iron ore is now largely used in the furnaces of Ohio and Pennsylvania, to mix with local ores of inferior quality. We learn that about 150,000 tons were all that could be got eastward during the past season, while the market would readily have absorbed twice the amount. With a railway south to Green Bay the demand for ore, it is believed, could have been fully supplied.

The opening of this line will have a very stimulating effect upon the Northwestern road, as it will give it a large business, and force the building of a hundred and forty miles of road along the west side of Green Bay, to connect the two lines, at an early day. We need hardly dwell upon the value and the importance of the Lake Superior trade. There are the largest and the richest iron and copper deposits to be found in any country. Tens of thousands of people are now there, developing these mines, and with proper facilities for marketing the products, these can be increased almost indefinitely.

We have heretofore stated that when spring opens, passengers will reach Lake Superior in thirty-six hours from this city. The time will be divided as follows; from Chicago to Green Bay the first day; Green Bay to Bay du Noquet by steamer during the night; and by stage fifty-five miles the next day to Marquette. Regular lines of steamers will ply daily between Marquette and all the ports on Lake Superior. It is scarcely necessary to add that this route will at once command nearly all the travel and a large share of the trade in light goods, between this city and Lake Superior.

Reorganization of the Pittsburgh, Fort Wayne and Chicago Railway.

We have received the statement of the Trustees relative to the reorganization of this company, accompanied by one of the best maps we have seen of a similar character. The line now forms a continuity of 467 miles from Pittsburgh to Chicago, and is now owned by one Company organised under several corporate franchises granted by the several states, within which portions of the work are situate. Prior to the present reorganization it was owned by one company formed in August 1856, by the consolidation of three distinct lines, owned by three distinct companies, to wit the Ohio and Pennsylvania extending from Pittsburg to Crestline in Ohio, 188 miles, of which 47 are in Pennsylvania and 141 in Ohio; of the Ohio and Indiana, from Crestline to Fort Wayne in Indiana 131 miles, of which 112 are in Ohio, and 19 in Indiana, and of the Fort Wayne and Chicago, extending from Fort Wayne to Chicago, 141 miles, of which 126 are in Indiana and 22 in Illinois. At the time of the consolidation the line was completed except the Fort Wayne and Chicago portion which however had been commenced. But still a large outlay was necessary to finish, equip and complete the line, and temporary credits were resorted to at a difficult period, and embarrassments arose of a very formidable character. Various expedients of relief were attempted and failed, litigation followed, and finally the road fell into the hands of the Courts of Pennsylvania, and the Circuit Court of the Northern District of the Supreme Court of the United States in Ohio. A compromise was then attempted by the union of the whole road in the hands of W. B. Ogden Esq., of Chicago as Receiver, agreed to by all parties, and an order appointing him was made January 17, 1860.

It was a Herculean task to adjust and reconcile the various and conflicting interests of those concerned, there were nine kinds of bonds mostly on seperate portions of the road, two kinds of bonds on the real estate of the company, and others issued to fund the various classes of coupons. On all these except what were called Bridge bonds, default in the payment of interest had occurred, the principal was coming due, the floating debt was nearly two millions, and millions more were necessary to complete the line.

Out of this chaos however by skilful management, and powerful interest came finally order and a satisfactory adjustment. The financial theory of the new securities, was the purchase of the property under the existing claims, under due process of law, a deferring of the payment of the whole principal thus created to a distant period, the funding of the interest in arrear as principal, and also two years' interest coming due, so that the entire earnings for that time should be applied to improving the road, and that after that period, the surplus earnings beyond paying interest on the 1st and 2d mortgage bonds, should be applied to the completion of the road and put it in the best condition. To carry out this plan new, systematic and uniform legislation from these states, was necessary enabling liens to be given on the whole property as an entirety, and also all future acquired property, the franchise to be a corporation, and available to the purchasers at any sale under these liens.

All this was accomplished, notwithstanding the numerous difficulties in the way, including negotiations with numerous parties in interest residing abroad. The creditors have largely gained by the arrangement, and the inferior and endangered interests have also been rescued from total extinction. Thus,

1. The bonds are not only secured upon the whole line of the road, but, by the force of statutes in all the States, upon future acquired property, the equipment and appurtenances—even such as are deemed in some of the States to be capable of being severed, by execution, from the body of the road—and upon materials, supplies, and implements, in all the States except Pennsylvania.

2. They are likewise secured upon the franchises to be a corporation now possessed by the company, which are by these statutes declared to pass to the purchasers, so as to enable them to organize anew, without the necessity of obtaining future legislation—often difficult, and sometimes practicable only through submission to unjust sacrifices.

3. They secure to their holders the right to vote in all meetings of stockholders—the first and second mortgage bonds at the rate of one vote for every two hundred dollars of their par value, and the third, at the rate of one vote for every one hundred dollars—a provision which the experience of mortgage creditors of many railroads in this country, in cases where the stock was of small or merely nominal value, has shown to be an invaluable guaranty.

4. Provision has also been made in the deeds of trust for a *quasi* organization of the bondholders, to enable them to act more efficiently for the protection of their interests and their legal rights.

5. The deeds of trust, by which the bonds are secured, are made by the proprietors direct to the trustees, John Ferguson and Samuel J. Tilden, subject to which, and in subordination to the right created by which, the company takes its title; a mode of conveyancing which, on careful consideration by counsel, in view of the peculiar nature and incidents of individual and corporate ownership under the laws and constitutions of this country, is deemed to be a valuable improvement.

6. These securities have been carefully prepared (in conformity, of course, to the bondholders' agreement) to make them as effectual as possible, under the best lights of all the large experiences—practical, financial, and legal—in regard to railway investments, of which the last ten years have been so fruitful.

We may therefore say the line has been rescued from ruin by these skilful arrangements, for which great credit is due to the various counsel employed, and especially to S. J. Tilden, E-q., of this city, counsel for the bondholders. To the Trustees and purchasing agents, Messrs. James F. D. Lanier, Louis H. Meyer, J. Edgar Thomson and Samuel Hannah, associated with Mr. Tilden, great credit is also due for this business-like conduct of the negotiations. The line is now in admirable order, well managed, and one of the great Trunks of the Middle and North Western States.

Philadelphia and Reading Railroad.

The following statement shows the business of the Philadelphia and Reading Railroad Company for October, 1862, compared with that of 1861:

Tot. net profit 11 mos.	$1,812,149 43	$1,287,311 31

Fuel for Locomotives.—The Central Railroad Arrangement.

The growing scarcity of wood for the use of our railways, and the rise in the prices of fuel have for some years past, led many of the various companies to adopt the use of coal burning Locomotives, by which a decided saving was effected. Since the recent great rise of coal, whether from diminution in the supply, the want of laborers, or the effect of paper money, it has become a very serious item of expenditure. The New York Central with its usual sagacity has provided for the evil day.

It is well known that north of Utica and Rome, there yet remain vast forests where the axe of the woodman has never resounded, and he has therefore spared those trees. Within two years past however, there has been a change. Some enterprising gentlemen familiar with the region, proceeded to purchase large tracts of woodland in the town of Williamstown, Oswego Co., and at a point about 28 miles from Rome. They then constructed a first class railway through the forests for a distance of three miles, from Williamstown on the Rome and Ogdensburg railroad, and sent in a body of laborers. The result has been that they are clearing three acres of land per day, deliver 120 cords of wood daily to the Central Railway, being the freight of 20 cars, at the cost to the company of $3 25 per cord, consisting of maple, cherry &c. The contract lasts for ten years, and the supply of fuel is unlimited. It is all taken for distribution eastward, between Rome, Troy and Albany, and there also stored in large quantities. Besides fuel for the Locomotives, a large amount of merchantable lumber is got out and sent to market for sale. Out of this single speculation, excellent for all concerned, other things have grown. A small village called Perkins has grown up at the wood choppings, named after an eminent public state functionary, forty dwellings are erected, stores and a school house have followed, and it is now intended to extend this little Branch railway of three miles, to Redfield centre, four miles further, where there is an old settlement in the heart of a flourishing country. Thus we see how Railways advance the local and general interests of the regions they traverse, how important is their influence in the developement and progress of industries, and especially how pleasant is the consideration that while they are doing so much good to others, they are also benefiting themselves by the act itself. In this instance the Central Railroad by a step in time, has secured

FOREIGN COMMERCE OF NEW YORK.

Value of Exports and Imports and Revenue from Customs at New York, in October, for three years:

Years.	Exports.	Imports.	Customs Rev.
1860.....	12,662,700	16,787,200	2,632,100
1861.....	13,172,500	8,523,700	1,672,600
1862.....	26,797,900	23,413,900	4,309,400

EXPORTS.

Value of exports from New York to foreign ports for the month of October:

	1860.	1861.	1862.
Domestic merchandise.....	$10,067,330	$12,904,380	$19,476,947
Foreign, dutiable.....	394,753	192,196	479,265
Foreign, free.....	94,175	60,968	179,205
Total merchandise.....	$10,556,258	$13,157,414	$20,090,417
Specie.....	2,106,395	15,038	6,707,519
Total exports.....	$12,662,653	$13,172,452	$26,797,936

Value of exports, exclusive of specie, from New York to foreign ports for ten months:

	1860.	1861.	1862.
First quarter.....	$20,827,000	$33,477,700	$32,075,600
Second quarter.....	22,740,800	33,123,500	29,798,300
Third quarter.....	26,079,800	30,075,900	46,313,400
October.....	10,566,300	13,157,400	20,090,400
Total.....	$80,213,900	$109,834,500	$127,277,700

Exports of specie from New York to foreign ports for ten months:

	1860.	1861.	1862.
First quarter.....	$4,212,300	$1,463,600	$8,906,400
Second quarter.....	17,367,500	1,785,800	19,069,900
Third quarter.....	17,777,500	30,400	14,866,700
October.....	2,106,400	15,100	6,707,500
Total.....	$41,463,700	$3,294,900	$49,550,500

Total value of exports from New York to foreign ports for ten months:

	1860.	1861.	1862.
First quarter.....	$25,039,300	$34,941,300	$40,982,000
Second quarter.....	40,108,300	34,909,300	48,866,200
Third quarter.....	43,857,300	30,106,300	60,190,100
October.....	12,662,700	13,172,500	26,797,900
Total.....	$121,677,600	$113,129,400	$176,829,200

IMPORTS.

Value of imports at New York from foreign ports for the month of October:

	1860.	1861.	1862.
For consumption.....	$10,974,428	$3,636,580	$8,462,554
Warehoused.....	2,817,461	2,082,381	3,699,806

fuel for its Eastern line for the next half century at a low price, and nothing can affect it. The Stockholders will find the gain in their pockets.

The Intercolonial Railway.

Now that the question of this railway is determined, we cannot do better than recapitulate in tabular form the distances of the three competing routes from Truro to Riviere du Loup as put down by Mr. Nelson in his pamphlet and map of the railway :—

The distances by these routes from Truro to Riviere du Loup are as follows :

No. 1.—Major Robinson's North Shore Line.

	Miles.
Truro to Bay Verte	69
Bay Verte to Shediac	26
Shediac to Indiantown, Miramichi River	74
Indiantown to Bathurst	56
Bathurst to Dalhousie	48
Dalhousie to mouth of Metapediac River	30
Metapediac to Naget River, branch of Metis	86
Naget River to Riviere du Loup	81
Truro to Riviere du Loup	470

No. 2.—Central Route.

Truro to Bay Verte	69
Bay Verte to intersection of European and North American Railway	24
Along European and North American Railway	22
Thence to Boistown	75
Boistown to Miramichi Lake	30
Miramichi Lake to Waggon Portage	75
Waggon Portage to Edmonston	27
Edmonston to Riviere du Loup	96
	418
Deduct road already made	22
Road to be made	396

No. 3.—St. John River Route.

Truro to Bay Verte	60
Bay Verte to intersection of European and North American Railway	24
Along said European and North American Railway to St. John	102
St. John to intersection of St. Andrew's and Quebec Railway	62
Along St. Andrew's and Quebec Railway to Woodstock	75
Woodstock to Grand Falls	65
Grand Falls to Edmonston	39
Edmonston to Riviere du Loup	96
	532
Of this 75 and 102 miles are already made	177
Road to be made	355

—*The Canadian News.*

Practical Science.

[We propose to publish from time to time such notices as the following, for the purpose of keeping our readers informed of the latest practical and useful discoveries in Science and the Arts.]

A camp stove has been invented by a mechanic of Redruth, which, 'by a judicious arrangement of the fine, heats, with a single fire, six ovens, a boiler for water, two large cooking boilers, and four smaller boilers and steamers.' An inventor of Exeter Eng., has invented 'improved spiral fluted nails,' which are not to cost more than ordinary nails, but are especially useful for strong, heavy work; and as the head is nicked like that of a screw, they can be drawn out at pleasure, after having been hammered completely in.—Pipes are now made of bitumen and paper, which resist a pressure of from 200 to 220 pounds to the square inch. It is thought they will supersede the use of iron pipes in the mines of Cornwall: their cost is not more than one-half that of metal, and they do not corrode. Owing to the quantity of acid contained in mine-water, the iron pipes are in the course of a few years reduced to half their thickness, or they become converted into a soft substance similar to plumbago. If, on further trial, the bitumenised pipes are found to be strong enough, their introduction into mining operations will be a great advantage. A 'differential pulley-block' is invented: 'By means of which you can accomplish what is usually effected with the aid of blocks and winch. With a force of one pound, you can lift twenty or twenty-two pounds.

A chemist at Berlin, Mr. Ruschhaupt, has lately patented a simple and economical apparatus for generating carbonic acid and other kinds of gas. It is a tub or box lined with lead, divided by a partition into two unequal spaces, the larger being the receptacle for the acid and marble, the smaller, which should be partly filled with pure water, being the outlet. The whole is made perfectly air-tight. Whenever a supply of carbonic acid is desired, the lead vessel containing the marble pieces is slid into the hydrochloric acid: a communication with the adjoining partition allows of the passage of the generated gas into pipes which can be led wherever required for use. Marble being a chemical combination of lime with carbonic acid, gives off the latter during the operation, and the lime forms chloride of lime, which may be used for bleaching or other purposes. In this way, as is stated, six pounds of marble-dust, and seven pounds of hydrochloric acid, will furnish about 170 gallons of carbonic acid gas; and at a cost of less than a shilling. In a description of the method, it is stated that 'there is no danger of explosion, as in the ordinary copper apparatus, because the pressure can never rise sufficiently high, and the evolution of gas can be stopped at any moment by withdrawing the sliding-rod which dips the marble into the acid.' In Germany, this apparatus will, it is anticipated, come largely into use for charging beer with carbonic acid gas, and in the preparation of mineralised waters, especially those in which oxide of iron is held in solution.

It is well known to curers of meat that the outside of the pieces operated on becomes too salt, while the centre is scarcely touched, and that fermentation in consequence takes place within. A short paper by M. Martin de Lignac has been read before the Society d'Encouragement at Paris, in which a new way of preserving meat is described. Suppose a ham is to be cured: the inventor introduces a sound from the knuckle-end between the bone and the flesh; this sound is attached to a stopcock, which communicates by a tube with a cistern containing water, salt, and various aromatics and condiments. The cistern being placed at a height of from twenty-five to thirty-five feet, the liquid begins to flow as soon as the stopcock is opened, and by its pressure rapidly fills all the meat immediately surrounding the bone, penetrating the fibres by infiltration, and distributing the conservative agent to the parts most susceptible of fermentation and change. When thus prepared, the ham is placed for some days in a bath of pickle, which prevents the escape of the infiltrated liquid within, while saturating the surface, after which it is hung up in a current of air, at a moderate temperature, until it has lost five per cent. of its weight. If required, it may then be smoked, but this process is not necessary for its preservation.

One of the most remarkable productions of Brazil is the Carnauba, a tree which grows wild over many thousands of acres. It is about 25 ft. high, and not unlike the cocoa nut tree, with very little foliage. It seems to supply food, clothing, furniture and lodging, and to be one of those companions in the wilderness whtch are more precious than diamonds. It is only shown in a picture at the Exhibition; but most of its substantial productions are scattered round it in infinite variety. It gives fruit, nuts, and gum; wax-paste and wax-powder; salt to flavor the nuts; potash, coffee, and candles; baskets to carry loads in, hats to wear, baskets to lie down upon, brooms to dust the mats, fans to cool the loungers, ropes, sieves, walking-sticks, whips, and wood for ornamental or useful purposes. Such a tree as this, asking for no attention, no scientific manures, even growing vigorously through the dry months, is a thing to be grateful for.'

Railway Progress.

Notwithstanding the apparent obstacles which a state of war offers to the progress of Railways, we perceive that our sister state of Pennsylvania keeps on in its great march of improvement. Among its works now being constructed and soon to be completed, are the Philadelphia and Erie Railroad, Reading and Columbia, Atlantic and Great Western, and the Erie and Pittsburg. The Philadelphia and Erie Railroad, when completed, will be 289 miles in length. 189 miles have been finished, the interval of 100 miles being between Tionesta and Decrano, through the counties of Cameron, Elk and McKean. The line will be in working order, if no unforeseen accident occurs, before July, 1863. The Pennsylvania Railroad Company are already preparing rolling stock, the cars being so marked as to be readily distinguishable from those in use on their own Road.

The completion of the Reading and Columbia Railroad will afford a new route between New York and Washington. The principal points on the route will be Easton, Allentown, Reading, Columbia, York, Baltimore and Washington. The distance will be about 236 miles. The Reading and Columbia line will traverse a rich country, and will be supported by local business.

The Atlantic and Great Western Railroad is intended, as is well known, to connect the New York and Erie and Ohio and Mississippi Railroads, and establish thereby a six foot gauge from St. Louis to New York. But the managers have determined to reach the Cleveland trade, and for this purpose, it is said, have leased or purchased the Cleveland and Mahoning Railroad. They will thus tap the Lake business, as well as that of the Far West.

The Erie and Pittsburg Railroad is being constructed southward from Girard (near Erie), following the course of the Beaver river.

ELECTION NOTICE.

PURSUANT to the provisions of the laws of this State, Public Notice is hereby given, by the Common Council of the City of New York, that an Election will be held in the several Election Districts of the various Wards of said city, on the FIRST TUESDAY of DECEMBER NEXT (being the second day of December, 1862.)

The polls will be held at the places which have been duly designated by the Common Council as the places at which Elections shall be held in said districts during the present year, and the Polls will be open at sunrise, and remain open until sunset, when they will be finally closed.

THE OFFICERS TO BE VOTED FOR AT SUCH ELECTION are the following:

A COMPTROLLER, in the place of Robert T. Haws.

A COUNSEL TO THE CORPORATION, in place of Greene C. Bronson.

An ALDERMAN in each of the Aldermanic Districts of the city having an odd numerical designation, viz: 1st, 3d, 5th, 7th, 9th, 11th, 13th, 15th, and 17th.

Six COUNCILMEN in each Senatorial District.

One COMMISSIONER OF COMMON SCHOOLS for each Ward.

One INSPECTOR OF COMMON SCHOOLS for each Ward.

Two TRUSTEES OF COMMON SCHOOLS for each Ward, and such vacancies as may exist in School Offices.

By order of the Common Council,

D. T. VALENTINE,
Clerk of Common Council.

Dated New York, Nov. 12, 1862.

Forging & Machine Work.

THE undersigned, having recently added several TRIP HAMMERS to his manufactory, corner Jay and Plymouth streets, Brooklyn, is prepared to forge STEEL and IRON of ALL KINDS and SHAPES, in pieces not exceeding 500 lbs. each.

Also, all descriptions of IRON and WOOD WORK, TURNING, PLANING, FITTING, etc., promptly executed.

Address R. L. ALLEN,
2143 189 Water st., New York.

CATAWISSA RAILROAD COMPANY'S COAL LANDS.

PROPOSALS for the LEASING of the above valuable COAL Property will be received at the General Office of the Company, **No. 308 WALNUT ST., Philadelphia.**

This property contains among other veins, the Mammoth, 47 feet thick, one vein of 7 feet and one vein of 6 feet; all of which have been lately and thoroughly proven.

Further particulars can be obtained from the Officers of the Company as above.

By order of the Board of Directors.

T. HASKINS DU PUY, President.
Philadelphia, Nov. 1, 1862. 4146

CAR DUCK.

HEAVY 4-PLY FITCHBURG DUCK OF ALL WIDTHS, 11 to 140 inches. PLUSHES, BURLAPS, CAR HEAD LININGS, and all kinds of RAILROAD SUPPLIES.

For sale by

WILLIAMS & PAGE,
67 Water st., Boston

OFFICE OF THE NEW YORK CENTRAL RAILROAD CO.,
ALBANY, November 1, 1862.

THE annual election for Directors of this Company and for three Inspectors of the next Election, will be held at the Office of the Company, in the city of Albany, on the second Wednesday (the tenth,) of December next. The poll will be opened at eleven o'clock in the forenoon, and will continue open for two hours thereafter. By order of the Board of Directors.

ROBERT L. BANKS,
5145 *Secretary.*

RAILROAD SPIKES.

500 TO 1,000 kegs 9-16 Railroad Spikes on hand, ready for immediate delivery, for sale by

NEW YORK RAILROAD CHAIR WORKS,
89 Maiden Lane.
Nov. 6th, 1862.

TO RAILROAD MEN.

A GENTLEMAN to take the superintendence of the sale of an improvement for Railway Cars. It is already introduced on some roads, and is valuable. To one acquainted with Railroad managers, and who has influence, a large annual income may be secured.

Address—**Car Improvement Co., Box 362, Post Office, New York.** 33tf

JUST PUBLISHED.

Holley's Railway Practice.

AMERICAN AND EUROPEAN RAILWAY Practice in the Economical Generation of Steam, including the materials and construction of

Coal-Burning Boilers, Combustion, the Variable

BLAST, VAPORIZATION, CIRCULATION, Super-Heating, Supplying & Heating Feed-Water, etc.,

And the adaptation of Wood and Coke-Burning Engines to Coal-Burning; and in Permanent Way, Roadbed, Sleepers, Rails, Joint-Fastenings, Street Railways, etc., etc.

☞ U. S. SECURITIES of all classes BOUGHT and SOLD. RELIABLE INVESTMENTS MADE FOR ESTATES.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000 and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

Refer to Messrs. J. & J. Stuart & Co., Messrs. Harper & Bros., Hon. M. F. Odell, M. C.; Messrs. Barclay & Livingston, Messrs. John Trippett & Bro., New York and Liverpool.

Orders promptly executed by mail.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,

HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

Challenge Air-tight
KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical in fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal, or wood.

Messrs. MUNN & CO.,

PROPRIETORS OF THE SCIENTIFIC AMERICAN continue to solicit patents in the United States and all foreign countries, on the most reasonable terms. They also attend to various other departments of business pertaining to patents, such as Extensions, Appeals to United States Courts, Interferences, Opinions relative to Infringements, etc. The long experience Messrs. MUNN & CO. have had in preparing specifications and drawings, extending over a period of sixteen years, has rendered them perfectly conversant with the mode of doing business at the United States Patent Office, and with the greater part of the inventions which have been patented. Information concerning the patentability of inventions is freely given, without charge, on sending a model or drawing and description to this office.

Consultations may be had with the firm between 9 and 4 o'clock, daily, at their principal office, No. 37 Park Row, New York. We have also a branch office in the city of Washington, on the corner of F and 7th sts., opposite the United States Patent Office. This office is under the general superintendence of one of the firm, and is in daily communication with the principal office in New York, and personal attention will be given at the Patent Office to all such cases as may require it. Inventors and others who may visit Washington, having business in the Patent Offices, are cordially invited to call at their office.

MUNN & CO., are very extensively engaged in the preparation and securing of Patents in the various European countries. For the transaction of this business they have offices at Nos. 66 Chancery Lane, London, 29 Boulevard St. Martin, Paris, and 26 Rue des Eperonniers, Brussels. Probably three-fourths of all the European Patents secured to American citizens are procured through this Agency.

A pamphlet of information concerning the proper course to be pursued in obtaining Patents, the requirements of the Patent Office, etc., may be had gratis upon application at the Principal Office, or either of the Branches. They also furnish a Circular of information about Foreign Patents.

During the last sixteen years the business of procuring Patents for new inventions in the United States, and all foreign countries has been conducted by Messrs. MUNN & CO., in connection with the publication of the SCIENTIFIC AMERICAN; and, as an evidence of the confidence reposed in them by the inventors throughout the country, we would state that we have acted as agents for more than FIFTEEN THOUSAND Inventors! In fact, they have become identified with the whole brotherhood of Inventors and Patentees, at home and abroad. We would state that we never had a more efficient corps of Draftsmen and Specification Writers than are employed at present in our extensive Offices, and we are prepared to attend to Patent business of all kinds, in the quickest time and on the most liberal terms.

Communications and remittances should be addressed to
MUNN & CO.,

American Railroad Journal.

New York, Saturday, December 6, 1862.

Canadian Petroleum.

We see it stated that the sources of the supply of this substance in Canada West are inexhaustible, and that it is a superior article. One barrel of the crude will produce 6,000 feet of a superior illuminating gas, and it is beginning to be used extensively for that purpose at Niagara, Hamilton and Toronto, in public as well as private edifices, the apparatus in the latter case being very simple, and manageable by any ordinary servant or laborer.

A demand for it for this purpose has sprung up in Russia, Germany, Italy and France. The oil in its crude state is used on the Engine and machinery of the Great Western railway with entire success, thus reducing one very large item of expenditure.

Manitoulin Island.

After long and tedious negotiations the Indians numbering about 2,000, have agreed to surrender their interest in the Great Manitoulin, containing a million of acres of excellent well timbered land, abounding in minerals, to the British Crown. It is to be laid out into farms, town lots and ports, and brought into cultivation and settlement. This island is one of the finest objects visible to the traveller on the great Lakes, and is directly in the course of the numerous steamers and sailing vessels passing between Detroit and Chicago.

Relief for Railway Employees.

We have recently ascertained that an extensive organization is going on in England, to provide relief for a numerous, valuable and important body of men employed there in the service of the Railway Companies. We do not know of any more deserving class. They are engaged in a business which demands all their time and attention, they act under great responsibilities, and the safety of millions of travellers is dependent on the skill and fidelity with which they perform their onerous duties. Yet they are subject to many accidents in the discharge of them, are often maimed for life, and frequently exposed to instantaneous death, leaving their families destitute and unprovided for. In view of all this, it has been deemed just and proper that a thorough system should be devised, by which when such accidents occur, some suitable provision should have been made to compensate them for the loss of their time, for the injuries they sustain, and to furnish their families with adequate relief, in case these accidents prove fatal. We therefore propose that an organization on an extensive scale should be undertaken in this country for a similar benevolent object, and have taken great pains to possess ourselves of the plans adopted abroad to effect it.

The principle is a simple one and the measure perfectly practicable. It is merely to form a general society, with a discreet board of managers in which the leading companies should be represented by their Presidents or some other officers, and to induce all those who are in the service of the Railway Companies, to allot a part of their wages, or make an annual subscription to a moderate amount, which shall go to build up a general fund, and out of this fund to pay each person who from sickness or by accident is disabled from performing his duty, sufficient to maintain him till his recovery, or to secure in case of his death for the widow and family surviving, a sum sufficient to relieve the necessities occasioned by the loss of their natural protector.

We have now before us the printed rules of "the United Kingdom Railway officers and servants association, established for the temporary and permanent assistance of any in the service, who from accident or other emergency may be unable to perform their duties, and to give a sum of money at the death of each subscribing member." This association is managed with the most liberal views, and besides giving prompt temporary assistance, grants annuities, and pays $250 on the death of each member to the party designated by him during his life-time.

The parties entitled to become members are officials, clerks, station masters, superintendents, guards, drivers, ticket collectors, conductors, policemen, porters, laborers, &c. A small registry fee is paid on entrance into the association, and an annual fee thereafter; certain privileges are continued to the members, even if they leave their employment, provided their general character is approved. When the number of members amounts to one thousand, it is ascertained from the calculations prevailing in life insurance companies, the funds will not only be ample for the required purposes, but will accumulate so as to secure a still increasing amount of assistance. It is supposed that in our Northern and Western States there are at least twenty thousand persons engaged in the service of the various railways.

A payment or entrance fee of $5, and an annual contribution of one dollar, would produce an amount abundantly ample to meet every contingency on the most liberal scale. The beneficial effects of this plan of association have been fully tested, even on a small basis. One British society commenced in 1812, has by a yearly subscription of only $1.25, been able to grant annuities to 1,020 persons, 238 of whom were living and were actually in receipt of $26,800, in sums of $100, $125, $150. The total amount of annuities so paid was $885,000! and the reserved fund still remained at $350,000. Another society commenced in 1843 is now paying $10,360 per annum to 99 annuitants; it had rendered temporary assistance of $85,000 to 1,900 persons, and yet has in hand $355,000. The Railway Companies of Great Britain have given their entire approbation to the benevolent scheme, and even devote a portion of the profits of their excursion trips to swell the capital of these excellent associations.

The advantage of this co-operation on their part is felt in the increased fidelity and good conduct of their employees, and greater diligence and care in the discharge of their duties. They

trive to maintain the interests of their employers and know that they have certain relief if any accident occurs to them.

We conclude, therefore, that the RAILROAD JOURNAL cannot perform a better or more acceptable service to the interests it was established to promote, than to devote itself to carrying through the proposed plan. It seeks the countenance and aid of the managers of our railways, in giving the plan publicity, and of recommending it to those whom they employ. It desires the co-operation of the press in advocating the proposition. It invites correspondence from all those who approve of it, and will be ready on the first evidence of its general acceptance to furnish the details of the organization, either with or without the intervention of some one of our safest savings institutions, in which a proper department could be readily organised, to give it stability, and to impart the confidence necessary to induce subscriptions from those so deeply interested.

We shall keep our readers advised of the progress made from time to time, and refer to it again at an early day.

Sandusky, Dayton and Cincinnati Railroad.

The earnings of this road for the year ending June 30, 1862, were as follows:

From passengers	$111,938 42
" freights	278,259 43
" mail	16,080 00
" express	9,344 58
" car mileage	12,979 41
" storage	1,528 59
	$430,130 43

And the expenses were:

Maintenance of way	$68,348 02	
Do., renewals	18,209 49	
Locomotive power	53,542 20	
Do., renewals	35,365 52	
Machine shop	12,257 21	
Train expenses	46,972 77	
Station "	45,668 97	
General "	38,157 83	
Taxes	11,109 69	
Loss and damage	1,488 15	
		331,119 85
Net earnings		$99,010 58
Interest account		33,729 84
Balance		$65,280 74

The cash receipts and disbursements during the year were as follows:

RECEIPTS.

Balance on hand July 1, 1861	$25,765 07
Receipts from transportation	426,243 17
Joint earnings with Cleveland, Columbus and Cincinnati Railroad Co.	8,022 53
Sales of old materials, etc	10,990 43
	$471,021 20

DISBURSEMENTS.

Operating, expenses, taxes, etc	$298,083 75
Renewals, as above	53 575 01
Bonds due in 1856—principal	44,450 00
" " —interest	15,032 00
Coupons of Sandusky city and Indiana bonds	31,220 00
Coupons under programme	181 00
Insurance for 1862-'63	2,250 00
Balance June 30, 1862	26,229 44
	$471,021 20

The gross earnings of the road for the year 1860-'61 (including $27,015 38 joint earnings with C., C. & C. R. R. Co.) were $450,245 36; for the past year, (including $8,022 53 derived from the same source), they were $438,152 92—exhibiting a decrease of $12,092 40. The expenditures in 1860-'61 were $391,656 46; for the past year they were only $331,119 85—showing a decrease of $60,536 61; and giving an increase in the net earnings of $48,444 21.

"This improvement," says the report, "is the result of well considered measures. Ruinous competition has been avoided; no sacrifices have been made for through business, off the line of our road, not forced upon us by that comity which is due connecting roads. This has enabled us to devote closer attention to our increasing local business; and by thus keeping our force under immediate control, has given more effective power with the same means. There has also been a reduction in expenses in performing corresponding service. A more faithful and judicious application of means, both mechanically and financially, is observable in the Superintendent's department. The result is, an improvement in the railway, rolling stock and machinery generally. Our freight department works satisfactorily under the existing arrangement."

The over due bonds of 1856, amounting, as stated in the last annual report, to $125,000 have been reduced $44,450—leaving outstanding a balance of $80,550, as will appear by the annexed balance sheet.

Interest upon these bonds, and also upon the S. C. & I. bonds has been promptly paid. The amount of $8,400, mentioned in the last report as due on the March 1, 1860, coupons of the S. C. & I. R. R. Bonds has also been discharged. The bonded debt otherwise remains the same as last year. Coupons are due upon all the securities, except those above named from 1860 to the present time. Of the third mortgage bonds, $81,000 are held by the company. The guaranteed securities are as follows:

Sandusky City and Indiana R. R. bonds	$350,000	
" " stock	300,000	
Springfield and Columbus R. R. bonds	150,000	
		$800,000

The amount of bills payable is $7,800, being all that remains of the old debt unliquidated. With the exception of the funded debt the company is solvent, and earns a surplus to be applied to that debt. Its pay rolls are promptly met, and all bills for materials promptly discharged. Its credit in purchasing is good. Renewals of past depreciation is going on yearly to the amount of about $50,000. Its equipment is being rapidly renewed. Its local business is retained and cultivated; and it is the aim of the management to avoid all such through business as cannot be made remunerative.

Much credit is due to the officers of the road for reduction of expenses, and efficient application of funds allowed for renewals. In this work the President, Mr. Follett, the Treasurer, Mr. Latham, and the Superintendent, Mr. Rice, have all concurred, working with zeal in their several capacities, for the best interests of the property. Perhaps to the latter gentleman more than any other is credit especially due, as the economics of a railroad lie mostly in the power of the superintendent.

The amount of depreciation yet to be made good is large. Considerable portions of the road will require to be relaid with new iron; much ditching, fencing and ballasting are to be done; and a considerable amount ($17,100) is yet to be expended upon the equipment. The sums required for these purposes are variously estimated at from two hundred to two hundred and fifty thousand dollars. When these are earned and judiciously expended, the road will compare favorably with the average of good Ohio roads. A moderate yearly expenditure will then maintain it in good order, and the balance of earnings will be wholly available upon the funded debt.

The subject of lease of the road has at divers times been agitated during the past year. No definite offer has yet been made by any responsible party. Though the directors hold themselves in readiness to entertain any proposition which may enure to the benefit of the stock and bondholders, they are aware of nothing in the circumstance or position of the company to make them over eager to surrender the property, and forego the chances of improvement which appear to be opening before them.

The prospect of the ensuing season is encouraging. The harvest in Ohio and the neighboring states is abundant. The produce movement must be extensive and long continued, while the road is prepared with ample equipment to receive and forward what falls to its share.

The equipment consists of 33 locomotives; 24 passenger, baggage, mail and express cars; 254 eight-wheel box freight cars; 61 eight-wheel stock cars; 79 platform cars; and 41 hand cars. Number of miles run by engines, 401,452. Tons of through freight transported, 68,002; do., way freight, 83,831.

CONDENSED BALANCE SHEET.

The office of the company is at Sandusky, Ohio. The officers and directors are:

President—O. FOLLETT.

Directors—A. Silsbie, I. M. Spelman, J. P. Yelverton, E. C. Litchfield, E. P. Williams, R. M. Pomeroy, Wm. Wilshire, J. Harshman, S. A. Winslow, I. S. Gardner, R. W. Sharon, O. Follett, R. Harper.

Secretary and Treasurer—L. H. LATHAM.

Superintendent—HARVEY RICE.

Master Mechanic—THEODORE LYMAN.

Buffalo and Lake Huron Railway.

It appears by the recent report made by the Directors of this Company that it is recovering from its difficulties very satisfactorily, and will eventually become one of the most valuable properties of its kind. To the American eye it has extreme importance. It reaches from a British port on Lake Huron to an American port on Lake Erie, and by an arrangement with the Great Western and Grand Trunk could have also two British ports on Lake Ontario, all fountains or reservoirs for business as the case might be. It is believed that some arrangement may yet be made to give the Buffalo and Lake Huron its due place in the great chain of Canadian traffic. And we here would take the liberty to suggest to the holders of Canada Railway securities generally, that however well their interests may hereafter be managed, both principal and interest will "sink together in the dust," if so fatal an event should occur as a war with the United States. The railway system of Canada this very moment is dependent on the American traffic, if not entirely, yet for the greater portion of it. Destroy that, and the Grand Trunk, Great Western, and all their allied and tributary routes will cease to pay even running expenses. Now the plain and obvious duty of the English and Canadian proprietors, is to support the Palmerston policy of non-intervention; to frown down all the aid and sympathy so unnecessarily and unfairly given the rebel cause by editors and ship builders; to discountenance the continued mischievous and irritating articles in the *London Times, Herald* and *Post;* and in short to advocate the golden rule, as applicable as well to politics, as to private conduct. Otherwise all these efforts to build up the Canadian lines will be money thrown away.

STATEMENT.

Working expenses.....	35,989	30,571	*5,418
	£11,095	£5,645	

*Decrease.

The Company has been put to some necessary expenses in dredging at Black Rock where its bridge crosses the canal, on the part of the line known as the Buffalo extension, and over which the Goderich train, locomotive and all, after being ferried across the river in a splendid steamer, runs into a depot at Buffalo without the least inconvenience to freight and passengers. So also expenses were incurred in repairs to the elevator at Goderich, and the dock at Lake Erie, by the destruction of freight at Brantford, and tolls paid the N. Y. Central. Negotiations are still in progress for a friendly connection between the Buffalo and Huron, and the Great Western, and Grand Trunk; and it is to be expected that the proprietors, being men of large and liberal views, will cordially agree on some basis of fusion, and some plan for working their lines in concert.

We have examined the Buffalo and Huron line, having passed over it in September last, and pronounce it an admirable railway in construction, well conducted as far as we were able to discover, of immense importance to the beautiful country it passes through, and a great saving in time and travel to the public by its cutting off the necessity of traversing Lake Erie. It should be the great route of pleasure travel to the Upper Lakes, and can be made such, if the agents in Buffalo and New York will advertise it in time, the next season. The trip up Lake Erie is without interest, and hackneyed, while Lake Huron, Georgian Bay, the Straits, Lakes Superior and Michigan, present magnificent scenery to the eye of the delighted traveller.

The distance between Goderich and Buffalo by water is 461 miles, by rails 161. It would seem that this difference should influence a large amount of business from Chicago and the Michigan and Wisconsin ports.

Baltimore and Ohio Railroad.

At the annual meeting of the stockholders of the Baltimore and Ohio Railroad Company held at Baltimore on the 17th ult., Hon. John P. Kennedy was called to the chair, and J. I. Atkinson, Esq., appointed Secretary. The President submitted the following statement:

The stockholders of the Baltimore and Ohio Railroad Company will remember that the President and Directors of the Company were unable to make the usual statement of its affairs and condition at the annual meeting, held on the 18th day of December, 1861.

Again, unhappily, the continuance of the war, involving great and repeated destruction of the works and property of the Company, and frequent and present hostile occupation of important sections of the line, has precluded the President and Directors from obtaining the information which, if in their power, it would be their duty to furnish to all interested in the road.

Much effort has been made to close the business of 1861. A large aggregate of services for the Government for that period still remains unsettled. Arrangements have recently been made under which it is hoped these settlements will not be much further delayed.

As soon as the revenue accounts can be adjusted, it is designated to submit a full report for that year.

The attention of all the departments of the service of the Company will continue to be directed to the procurement of requisite data as to the extent of the damages, condition of the works, machinery, etc., so that as early as practicable the report for the fiscal year terminating 30th September, 1862, shall be presented.

During its protracted embarrassments and losses, the Company has energetically maintained a most careful and economical system of management, which, in combination with its strong financial position at the commencement of its difficulties, has enabled it to meet promptly all its engagements, and to maintain its credit and the character of its securities at the highest standard.

Whenever protection has been afforded, the Company has with marked rapidity re-opened its route. The entire road was restored and worked from April 1st to May 29th, and from June 9th to 5th of September last.

As indicating the vast uses and necessity to the country of this leading avenue of commerce from the valley of the Ohio to the seaboard, it is interesting to state that, upon the re-opening of the road, the company announced a large reduction of the rates of transportation from western to eastern cities, and notwithstanding these lessened rates as compared with those charged by the other Atlantic lines during the blockade of the Baltimore and Ohio Road, the revenue of the Company for the months of July and August is estimated to have exceeded $1,200,000, being the largest sum earned by the Company, for the same length of time since the construction of the road to the Ohio River.

In consequence of its ability to thus work for a portion of the year, over its entire line, the Company was enabled to pay its usual semi annual dividends. And it is further satisfactory to state, on behalf of the Board, that it has also fully maintained the sinking funds established for the extinguishment of its funded debt. The success of that system continues to be demonstrated—the sinking funds having been increased from $1,356,371 35 on the 30th September, 1860, to $1,847,554 71 on the 30th September, 1862, exhibiting the gain for two years of $491,183 36.

These results have been realized without any payment by the Government for the losses and immense and repeated destruction of the property of the Company.

The Board having determined to replace the numerous wood and iron and wooden bridges which have been destroyed in the progress of the war with iron structures of the most substantial and improved description, the material was promptly secured; and a considerable portion of the work has been successfully accomplished in the shops of the Company.

For the purpose of furnishing employment to the large number of faithful workmen of the Company during a period of depression, as well as to maintain its capacity for extensive and effective action when the road should be restored to its normal condition, the full forces have been retained, and have been engaged in repairing and constructing locomotives, cars and requisite machinery.

Arrangements have been made, and no efforts will be spared again to re-open the line, whenever the opportunity is afforded, and with the repaired and newly constructed machinery, it is believed a very large business can, as heretofore, be successfully transacted.

JOHN W. GARRETT, President.

The following gentlemen, comprising (with the exception of Mr. Kirby) the old board, were elected directors for the ensuing year: Johns Hopkins, Samuel W. Smith, Francis Burns, William A. Hack, John Spear Nicholas, John Gregg, C. Oliver O'Donnell, James Harvey, William Heald, Galloway Cheston, Wm. W. Taylor, Samuel Kirby.

New Michigan State Loan.

We give below the result of the offers made for the New Michigan State Loan, a substitute or rather a renewal for one about maturing, and provided for in this way. The proposal of the State Treasurer, John Owen, Esq., was for $240,000 of 7 per cent 5 year bonds, $223,000 of 6 per cent 10 year bonds, $186,000 of 6 per cent 15 year bonds, making a total of $873,000.

The reason for asking for bids for different classes of bonds arises from the fact that this is a renewal of some portion of the State debt. The entire debt of the State on the 1st of July last was as follows, viz:

Adjusted bonds, 6 per cents, due in 1863	$1,744,185 00
Full paid five million loan, 6 per cents, due in 1863	177,000 00
Part paid five million loan, when funded (due in 1863), will be	83,314 00
Renewal loan, 6 per cents, due 1878.	216,000 00
Temporary loan, 7 per cents, due in 1878	50,000 00
Internal improvement warrant bonds, on demand	50 00
Sault Canal bonds, 7 per cents, due in 1879	100,000 00
War loan bonds, 7 per cent, due in 1886	605,500 00
Internal improvement warrants, due on demand	8,592 82
Total	$2,979,641 82

Since that time, the State has commenced redeeming the war debt, which is redeemable at the pleasure of the State. About $40,000 of this has

already been paid. At the last regular session of the Legislature, the treasurer was authorized to issue new bonds for the old to such persons as desired to exchange, and, if not exchanged, to sell the new bonds and redeem the old ones. Under this law, all but $873,000 have already been exchanged, and the present proposals are for the sale of the balance. Hence the fact that some are 7 per cent, and some 6 per cent bonds. Some run for five, some ten, some fifteen, and some twenty years.

The Michigan state loan has been awarded at an average of 102½ for the seven per cents, and 100½ for the six per cents. The bidding was for more than three times the amount of the seven per cents required, and also in excess of the six per cents.

The award of the Michigan loan is as follows; $240,000 of seven per cent. five year bonds at 102¼a103¾; $223,000 of six per cent. ten year bonds, $186,000 of six per cent. fifteen year bonds, $214,000 of six per cent. twenty year bonds, at an average of 100½.

We need not reassure those, says the Detroit *Free Press*, having money to invest that we consider the bonds of the State of Michigan the very best security possible. If any one doubted this it would only be necessary to refer to the following table of the revenues of this state:

Year.	*Rate of Taxation.*	*Total.*
1842	2 mills per dollar	$62,148.63
1852	3 55-100 mills per dollar	195,854.71
1862	2 7-10 mills per dollar	660,166.50

There is no probability of the state debt being increased. On the contrary, it is now certain that with this revenue the whole of the war loan will be paid in the next two years, leaving our actual debt to the public at a fraction over $2,000,000. This is nothing for a state which had in 1860 over 750,000 inhabitants, and whose real estate was valued at $262,785,750. The bonds now offered ought to bring a large premium in the market, and we have no doubt they will, if those who have money to invest will examine into the security. The finances of the state have been managed with very great ability by the present state treasurer, and as long as he controls this department of the state government there need be no fear that its credit will ever be suffered to depreciate.

Endorsements made by Bank Cashiers.

CASHIERS HAVE NO POWER TO MAKE CONTRACTS OF ENDORSEMENT FOR THEIR BANKS, UNLESS ESPECIALLY AUTHORIZED BY THE CORPORATION.

The following case was recently determined by the New York General Term of the Supreme Court of the State of New York. The action was brought by the bank of the State of New York claiming to be the holder of a bill of exchange, against the Farmers Branch of the State Bank of Ohio, as endorser. The answer denied that the defendant made any contract of endorsement upon the bill, but admitted that the defendant's cashier, P. S. Campbell, for the sole purpose of facilitating its collection, wrote on the back thereof as follows: "Pay E. Ludlow, Cas., or order; P. S. Campbell, Cas., and transmitted the same to the defendant's agent, the Ohio Life Insurance and Trust Company at the city of New York, for collection only, and remittance of the proceeds thereof to the defendants; the said Trust Company not being authorized by the defendant to sell, pledge, or in any manner dispose of or use the said bill, except in collecting the sum secured thereby for the use of, and for remittance to the defendant."

On the trial the complaint was dismissed, and the plaintiff appealed. The following is the decision of the appellate tribunal.

CLERKE, J.—Assuming that the plaintiffs are *bona fide* holders of the bill in question are they entitled to recover? The solution of this question depends upon the effect of the endorsement made by the defendant's cashier. The name of the defendant's corporation does not appear anywhere on the paper. The bill was endorsed "Pay E. Ludlow, Cas., or order," signed "P. S. Campbell, Cas." It is not disputed that Campbell was the cashier of the defendant, and that he was authorized to endorse, for the purpose of transmitting to other banks for collection, bills and notes deposited with the defendant or discounted by it. But it no where appears that the cashier was authorized to affix his name, or that of the bank, for the purpose of making the bank liable on a contract of endorsement. The general rule, undoubtedly, is that in order to bind the principal the agent must contract in the name of the principal, and not his own. As Judge Denis says, in the Bank of Genesee *vs.* the Patchin Bank, in most of the cases varying from this principle, if not in all, though the engagement purported to be that of the person signing as agent, the name of the principal appeared in some part of the instrument; and that circumstance is particularly mentioned as essential. In the Bank of Genesee *vs.* the Patchin Bank, that feature was wanting as in the case before us. But the judge was of opinion that the Patchin Bank should be held liable as endorser upon a different ground—that of allowing the endorsement to be filled up according to the intention of the parties; and he cites several cases in which the right to do this was recognized. The whole amount of that decision, on the point in question is, that where the cashier of a banking corporation is authorized to endorse paper on its behalf, and with the intention of binding the corporation he writes his name. "A. B., cash" on the paper, the holder is authorized to write the name of the corporation over the signature of the cashier, with proper words to make the endorsement in form a contract in the name and behalf of the corporation. In the case before us nothing of the kind is shown; but, on the contrary, it is distinctly averred in the answer, that the cashier put his name on the bill for the sole purpose of facilitating collection; and that he transmitted the same to the bank's agent in the city of New York, for collection only. The plaintiff claims to recover solely on the ground that the name of the cashier appears on the bill, without proceeding to show that the endorsement was made in behalf of the defendant, with the intention of binding it.

This conclusion does not in the slightest degree conflict with the decision in the Farmers and Mechanics' Bank *vs.* the Butchers and Drovers' Bank. In that case the teller was authorized to certify checks; and it was held that, as he was authorized to make this representation of a fact, the bank was bound by his representations, even when he made a mistake. This was placed on the doctrine of *estoppel*; but it surely does not recognise the right of even the duly authorized officer of the bank to make a contract for it in his name, without showing that it authorized him to do so on its behalf, and with the intention that the bank should be bound. The judgment should be affirmed with costs.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Nov. 21, 1862, was as follows:

Passengers	$20,891 16
Freight and live stock	41,961 72
Mails and sundries	2,293 05
	$65,145 93
Corresponding week of last year	46,106 06
Increase	$19,039 87

The receipts of the Grand Trunk Railway of Canada for the week ending November 15, 1862, were:

Passengers	$21,155 92
Mails and sundries	4,112 40
Freight and live stock	75,594 30
Total	$100,862 62
Corresponding week of last year	93,704 16
Increase	$7,158 56

The Galena and Chicago Railroad earned the

3d week in November, 1862	$36,683 43
Do., 1861	34,919 57
Increase	$1,763 86

The Michigan Central Railroad earned in the

3d week of November, 1862	$72,534 00
Do., 1861	52,593 00
Increase	$19,941 00

The Michigan Southern Railroad earned for the

3d week of November, 1862	$64,540 00
Do., 1861	50,888 00
Increase	$13,652 00

The Chicago and Rock Island Railroad earned

the 3d week in November, 1862	$34,681 00
Do., 1861	32,938 00
Increase	$1,433 00

The Toledo and Wabash Railroad earned the

3d week of November, 1862	$34,578 55
Do., 1861	32,493 99
Increase	$2,079 56

The earnings of the Milwaukee and Prairie du Chien Railroad for the 3d week in November,

1862, were	$28,714 03
Do., 1861	31,263 45
Decrease	$2,549 42

The Cleveland and Toledo Railroad earned the

3d week of November, 1862	$29,091 00
Do., 1861	20,454 00
Increase	$8,637 00

The earnings of the Illinois Central Railroad

for the 3d week in Nov., 1862, were	$76,848 30
Do., 1861	54,189 55
Increase	$22,658 75

The earnings of the Chicago and Alton Railroad for the 3d week in November, 1862,

were	$23,041 92
Do., 1861	22,106 19
Increase	$935 73

American Railroad Journal.

Saturday, December 6, 1862.

Stock and Money Market.

At the time of our going to press we have not received the report of the Secretary of the Treasury. It is believed his views will be found unchanged on the general policy of finance which he has hitherto adopted. If the President's message foreshadows anything in relation to Mr. Chase's movements, we may believe that it will be recommended to Congress to change the whole character of our banking currency, by a substitution of U. S. demand notes in place of their own. We are not prepared to accept this proposition, as it undoubtedly interferes with the principle of free trade in money, and would place the banks of the States and all their stockholders in the possible position of being some day ruined by any maladministration of the Treasury department and the Government. Instead of providing gold to meet their own notes, as they are legally bound to do, they would use Government notes even if they were below par, and thus have no inducement to return to a sound condition. Now, it is their interest to make their currency equal to gold, except when suspended by the force of circumstances or the sanction of law, and this is an anomalous and only temporary difficulty.

The clamor set up in favor of the Government's relying for funds solely on long loans has nearly died away, its impracticability being very apparent. Suppose the policy was adopted, what would the Government get as the proceeds of

these loans? Most certainly whatever currency the banks or capitalists chose to give for them. This would be local in its character, uncertain in real value, subject to discount, of great variety of form and appearance, easily counterfeited and difficult of detection. They would only pass readily where they were well-known.

And how long could even this sort of currency last, with the present limited amount of banking capital? Suppose the war is to cost before its conclusion one thousand millions of dollars, could the present banks supply that amount in paper? We imagine not. Nor could a constant current of circulation be counted on, from the banks to the Government, from the Government to the people, and the people to the banks. Experience teaches that a very large amount of good circulation is hoarded and laid up. Every body does not owe a bank, nor keep an account with a bank. If the public could not lay up gold, they would the best kind of bank notes, and the event is not without the range of possibility, that the best part of the circulation would disappear. In this view of the subject, it is evident enough that the Government instead of leaning on the means and credit of the banks had much better lean upon its own. These are what we understand. Every man can refer to the fiscal condition of the country whenever he pleases. There are no secrets about this. We are officially informed of the expenses of the Government, and of its revenues from commerce and direct taxation, and we have the power by legislation of controlling them. But who really knows the solvency of a bank? The blow up of a banking institution is always sudden and unexpected. But the Government has inherent and available resources which are public and within reach. Its currency has, therefore, infinitely greater strength and stability than any other which can be devised; and as long as we are a nation, the people must confide in its resources, for these are but another term for their own.

The complaint that excessive issues of paper cause a rise in the value of commodities is true, but even this has palliatives. Some of the greatest writers on finance say, that this rise in prices is but an equalization of interests all round. The standard is larger, and that is all. "Nobody is hurt." It is only the tendency to speculation arising from an excess of paper which is dangerous, and even this remedies itself.

Nor is this rise in prices uncommon even when gold is as plenty as paper. We have seen almost every leading article of the country at times nearly doubled in price, by accident or design, and then when money was scarce, the rise pressed hardly on labor. The rise indeed is mitigated in its effects, when three dollars per day are now paid for labor, which three years ago obtained but one dollar, or one dollar fifty cents. Here is a hundred per cent advance in favor of the laborer, who if he wishes to get gold has to pay but 30 per cent for it.

If we would but look coolly and patriotically at the condition of the country, and its exigencies, consider what there is at stake, and the immense consequences which are to flow from the present issue, we should ascend to a higher stand point for our observations, use a little philosophy in our speculations, and a good deal of patriotism.

We repeat what we have said often before, that at this moment, there are but two pressing demands for gold and silver. One to pay any balance of foreign indebtedness that arises from excessive importations, and the other for interest on Government loans. And the consumers of imported articles by a wholesome economy can lessen this balance of trade very materially. If they choose to be extravagant they must pay for their extravagance. But a vast number of sensible and even wealthy people economize in their personal expenses, and give liberally to the war. We apprehend then no serious difficulty from the financial system which our Government is in truth compelled to adopt. It gets all the money it wants almost without interest. If any person holds so much of it as to feel uncomfortable, he can fund it in bonds of which the interest is payable in gold—the best possible security he can have, and the only kind, with a very few exceptions of a peculiar character, where the interest is now payable in gold.

The national currency is the most popular we ever had, the most convenient, and eventually the most secure. Let our readers refer in another column to the report of the Agricultural Bureau from the pen of Isaac Newton, Esq., the United States Commissioner, and he will there see in that most able document what this country really is. There is not another on the face of the globe which has such inexhaustible resources or as much energy.

Finance should retire its theories to its vaults for a while, until this war is over. This is the great subject for consideration at present: How shall this country be saved? not what Messrs. Bills, Brokers & Co., think about the premium on gold. Let us restore the Union, become once more a united people, peaceably if we can, but forcibly if we must. Let us use all the weapons which God and nature have put into our hands, to effect this object; and these are numerous enough, and of diverse forms enough to ensure success, without any violation of humanity or justice. He who contemplates the separation of these States under any pretence, or for any purpose, is a traitor to the interests of heaven and man. The most keen sagacity has not yet fully foreseen the utter ruin of the people of this country, if they break up into small confederacies, or even two of them. What kind of a currency should we have, what of commerce, what guarantees for peace or personal security, or industrial success, when each State should live only for itself, distrustful of and inimical to all others? No. Now's the day and now's the hour. The war must be carried to its rightful issue, and the Government must be armed with all the money and the men it needs, without taking lessons from dealers in bullion, or discounters of notes.

We have referred on a former occasion to a proposition made the Government, to substitute the new and beautiful metal aluminium, for the silver used in the coinage of three cent pieces. This metal is hard, lustrous, untarnishable, ductile and very light. It costs about half the price of silver, and yet can be used for any purpose for which silver is valuable. Twenty-three grains of it, the weight of a three cent piece, would produce, owing to its lightness, five three cent pieces, and thus the mint would be a larger gainer than it is by its nickel cents, which afford a profit to the Government of nearly sixty per cent, and yet no one objects to taking them, but on the contrary the cry is for more. Now these aluminium coins would be a great boon and blessing at this moment, they would be convenient, portable and peculiar. They would pass readily, and be convertible as silver is into all objects of art or luxury. Yet no impression can be made on those persons whose business it is to look into these things. Politicians and officials can be heard, even when the enemy is thundering at the gates of Washington, but who can be heard that thinks only of his country.

The truth is our greatest men are not in their right positions. There are plenty of these in retirement, who are trained and practised statesmen, but their voice is not heard. There are those whose counsel would give a different aspect to our affairs at home and abroad, but they are elbowed out of the way by the shallowest pretenders. This is the fearful penalty we pay for ignoring all other qualifications for office but devotion to party; and no party is free from censure that conforms or has conformed to this rule.

To return to our main subject, we have to say in conclusion, that for every position we have taken with regard to finance, we have the authority of our most eminent statesmen.

In this market, money is said to be easy on call at 6 per cent, though we think a borrower on call can never be easy about it himself. Gold has risen and fallen according to the wants of the speculators, and for no other reason. Exchange marches in advance, and keeps its measured distance with great precision. We read a great deal about the rate of exchange, many letters of advice from foreign bankers, and see much concern on their part about the course of the Bank of England, and the solvency of our own Banks. We fall back on a well known truth, that in most cases the advice of capitalists is the worst a Government can take, for these men never think for any classes, or any objects but their own.

The Duke of Wellington was nearly ruined in his peninsular war, by the conduct of this very class of operators.

In addition to our former tables of Stock and Bonds, we have recently added one embracing the monthly earnings of the principal railways in the Country, as far as they are published, such as are regularly quoted at the New York Stock Exchange. We should be glad to receive at this office the monthly returns, directly from the offices of these companies, that we may carefully revise them and publish them correctly. We beg to call their attention to this subject.

We are preparing, and shall soon have ready for publication, (perhaps next week) an addition to the Bond List—giving the *time when* and the *place where* the coupons are payable.

The following reported sales are in addition to the daily quotations given elsewhere in our columns:

New York.—Rome and Watertown, 82; Cumberland Coal pref., 12¼ and 13¾; Norwich and Worcester, 72 and 73; Stonington, 104; Illinois Central cancelled bond scrip, 60; do., full paid stock, 74½; Jersey City Water Loan, 109; N. Y. City 6s, 1870 and 1878, 110; Illinois coupon bonds, 1862, 101½; Sixth Avenue R. R. 124; Nic. Transit Co., 5½.

Boston.—Concord and Portsmouth, pref., 120; Connecticut and Passumpsic River, 15; New Bed-

ford and Taunton, 76¾; Concord, 60; Ogdensburg 1st mort., 90; Rutland 1st mort., 42¾; Vermont Central 1st mort., 24⅛; do., 2d mort., 1½; Great Falls and South Berwick 6s, 1864, 82½; Great Falls and Conway 6s, 1874, 90¼; South Shore R. R., 6s, 96; Rhode Island 6s, 1882, 111; Bath, Me., 6s, 1870, 103¼; Boston City 5s, 1865, 109; Malden and Melrose, 7; Copper Falls Mining Co., 6¾; Acton, 6⅞; Pontiac, 4⅞; Toltec, 3⅜; Huron, 9½; Superior, 4¼; Hancock, 6¾; Petherick, 2⅝.

Philadelphia.—Philadelphia and Erie shares, 18; City 5s, 1866 and 1867, 95¾; Schuylkill Nav., 4¾; do., pref., 13¼; do., 6s, 1876, 55; do., 6s, 1882, 68½; Ridge Avenue 6s, 90; do., 7s, 97; Green and Coates 7s, 103; 17th and 19th streets, 10⅜; Huntington and Broad Top 1st mort., 93; Chesapeake and Delaware 6s, 93½; West Branch bonds, 101⅞; Schuylkill Canal 6s, 86½; Wyoming Canal bonds, 66.

Baltimore.—Western Maryland bonds, 77¼; do., guaranteed, 103; City bonds, 1860, 104; Central Ohio 1st mort., 97½.

Two new Railroads out of Washington City.

We have read with great interest the recent proposition made by the Aldermen and Common Council of the City of Washington, to construct within four months' time, two short railways between the Capital and Annapolis, and the Point of Rocks. It is a proposition ably supported in the memorial signed by the Mayor, Richard Wallach Esq., and one in which the whole country is deeply interested.

There is but one Railway which actually enters that city, and travellers who come from the West by Harpers Ferry over the Baltimore and Ohio Road, have to pass round four sides of an irregular area to reach it, while a direct road to the Point of Rocks would be but fifty four miles in length.

From Washington to Annapolis, which is about half the distance between the former place and Baltimore, there is no Railway communication except by the Annapolis Branch, thus compelling the traveller to journey around two sides of a railway triangle, when the hypothenuse would be a much shorter way.

The present war shows the importance of both Annapolis and the Point of Rocks, to the prompt execution of the military power of the Government. When Washington was in its first danger, the troops of the North had most of them to go round by Annapolis, to prevent their being cut off at Baltimore, or at least hindered from passing through that city. And had there been a direct road to the Point of Rocks, neither the affairs at Bull run, or Bull's bluff, nor the retreat of Banks would have been so disastrous, or might not have occurred.

It is stated in the memorial alluded to, that by the construction of the proposed railway to the Point of Rocks, the amount of transportation to be saved on the present freight daily going round by Baltimore, would be $3,855,000 per annum. The road can be built for $20,000 per mile or about one million of dollars, thus demonstrating the great advantage and saving to be gained by the project.

So too with regard to the road to Annapolis. The Potomac was for months closed by the enemy's batteries, and Washington was cut off from the sea. Had there been a railway to Annapolis, a vast expense of transportation and great delay could have been avoided. If the fortune of war should ever again bring the confederates to the Potomac, we might again witness a similar disgraceful state of things.

But the National Capital should be the terminus of many railways, for the accomodation of the people at large and for its own security. A vast amount of public business is necessarily transacted there, and it is the resort of great numbers of citizens for that reason from all parts of the Union. It should be accessible to them in time of peace as well as war.

We understand the President and Secretary of War believe they have no power to act in the premises. If not, then an effort should be made to pass a bill through Congress for the construction of these works without delay. Why is it, that there are so many obstacles heaped up to prevent the execution of such important measures? When will our rulers and legislators rise to a sense of theirduties. How long must paltry doubts obscure their vision.

War is now dependant for its successes on railways and Telegraphs. The rebels well know their utility if we do not.

We trust the subject will not be allowed to slumber, but that Mr. Wallach and his associates will give no rest to their eyes, nor slumber to their eyelids until they have succeeded in their truly national and patriotic enterprise.

The Nature of Promissory Notes.

PROMISSORY NOTES—WHEN PAYABLE IN EITHER MONEY OR GOODS, AT THE OPTION OF THE PAYEE THEY ARE VALID. A NOTE MUST BE PAYABLE UNCONDITIONALLY IN MONEY.

An action was brought in the N. Y. Supreme Court, upon four notes; the following being a copy of one of them.

WILLIAMSBURGH, Dec. 20, 1859.

Four months after date I promise to pay to the order of M. W. Wilson, fifty-five dollars, at my store, No. 134 4th street, (or in goods on demand), value received.

(Signed) M. W. WILSON.

The complaint alleged that neither the plaintiff nor any other holder of said notes, or any of them ever elected to take payment in goods.

The defendant demurred to the complaint, on the ground that it appeared on the face thereof that it did not state facts sufficient to constitute a cause of action. After argument, at a Special Term of the Court, the demurrer was overruled, the Court holding the notes to be negotiable promissory notes. The defendant then appealed to the New York General Term of the Court, which Court now sustains the judgment of the Special Term. The following opinion was rendered at the decision of the case.

INGRAHAM, J.—The notes declared on in this action were promises to pay the amounts therein mentioned as dollars, or *in goods on demand.* The complaint merely gives copies of the notes, with an averment that no holder of the notes had ever elected to take payment in goods. The defendant demurred to the complaint, on the ground that there was no cause of action stated therein. The demurrer was overruled. The decision of the questions arising on the demurrer depends upon the question whether the instrument is a promissory note. If it is, then the complaint is sufficient.

The essential requisite of a promissory note is, that it must be payable in money absolutely and without any contingency. Such payment must be precise and certain. So a written promise to pay the bearer a certain sum of money in goods is not a valid promissory note. If there appears upon the face of the note any contingency which would make it payable in anything other than money, then it does not possess the negotiable qualities of promissory notes, and becomes a mere contract. It is an alternative agreement to pay a sum of money or do some other act. In the present case the debtor promises to pay in money. He has no election to do anything else. If the holder chooses, he may surrender the note and receive goods; but that rests entirely with himself, and no choice was left to the debtor.

Upon the argument my impressions were adverse to the sufficiency of the complaint; but a late case in the Court of Appeals has, I think, established a contrary doctrine. In Hodges *vs.* Shuler it was held that a note of a corporation, for a specific sum, with a fixed time for payment, and containing the condition that the holder might within a given time surrender the note, and receive stock in lieu thereof, was a promissory note. This was no other than a note for money, or in case the holder elected within the time specified to be paid in stock. Wright J. says: "The instrument is a promissory note. It is for the unconditional payment of money, at a specified time, to the payee's order. It was not optional with the makers to pay in money or stock, and thus fulfil their promise in either of two specified ways; in such case the promise would have been in the alternative." And again, "although an election was given to the promisees upon a surrender of the instrument to exchange it for stock, this did not alter its character, or make the promise in the alternative, in the sense in which that word is used respecting promises to pay."

Whatever views I might otherwise entertain of this question, I think the decision last cited covers this case and controls us in the disposition of this question. It was said that the averment that no demand had been made for the goods, sustained the grounds taken by the defendant. Upon that point I have no difficulty. The answer to it is, that the averment is unnecessary. The matter was only available as a defense, if the demand had been made and complied with. Even if the demand for goods had been made, the debtor would not have been relieved from his obligation to pay in cash, except by delivering the goods demanded. In case of omitting to do so, the obligation to pay remained. If he had paid, the note would have been surrendered. The judgment of the Special Term should be affirmed.

Interest and Dividends.

The bonds and coupons of St. Louis county, due 1st December, 1862, will be paid, on presentation at the Bank of Commerce.

The interest coupons of the first mortgage bonds of the Buffalo, New York and Erie Railroad Company, due December 1, 1862, will be paid at the Bank of Commerce.

The Delaware and Hudson Canal Company have declared a semi-annual dividend of 3½ per cent, payable on and after the 19th inst. The transfer books will be closed until the 14th inst.

The coupons on the first mortgage 10 per cent. Bonds of the Chicago, Iowa and Nebraska Railroad, which matured Dec. 1, will be paid at the Park Bank New York.

The bonds of the Brooklyn Central and Jamaica Railroad Company payable on the 15th inst., and also those payable one year thereafter, will be paid par and interest, on presentation at the office of A. G. Jerome & Co., No. 20 Exchange-place.

The Chemung Railroad Company have declared a quarterly dividend of two per cent. clear of Government tax, payable on demand, at the Park Fire Insurance Office, No. 237 Broadway.

Coupons due December 1st on the Milwaukee City readjustment bonds will be paid on and after that date on presentation at the office of W. Schall & Co. 58 and 60 Exchange-place.

The interest upon Iowa State Stocks, due January 1st, 1863, in New York, will be paid at the Banking House of Gilman, Son & Co., 47 Exchange-place.

☞ The Boston and White Mountain section of the American telegraph line was opened for business on Monday as far as Plymouth, N. H., including Manchester, Concord, and other intermediate stations.

Valuation of the State of New York.

The comparative value of the real and personal estate in the principal counties in the State of New York, as fixed by the board for the equalization of the taxes for 1862, is as follows:

Albany	$39,354,490
Cayuga	22,292,079
Columbia	21,714,722
Dutchess	33,857,806
Erie	46,538,000
Kings	93,231,884
Munroe	29,607,242
New York	549,624,306
Oneida	24,739,962
Onondaga	26,301,687
Orange	25,856,071
Queens	21,177,286
Rensselaer	31,153,490
Richmond	5,819,040
Saratoga	12,345,237
St. Lawrence	15,060,640
Ulster	14,826,791
Westchester	43,525,997

The principal cities and towns in the State are in these counties.

The poorest county in the State is Hamilton, rated at only $606,573.

The value in the whole sixty counties is about $1,350,000,000.

Department of Agriculture.

Circular concerning the Agricultural, Mineral, and Manufacturing Condition, and Resources of the United States.

DEPARTMENT OF AGRICULTURE,
WASHINGTON, 1862.

SIR: The Congress of the United States, on the 17th of May last, passed an act containing, in part, the following provisions:

"There is hereby established at the seat of government a Department of Agriculture, the general design and duties of which shall be to acquire and diffuse among the people of the United States useful information on subjects of agriculture, in the most general and comprehensive sense of that word, and to procure, and propagate, and distribute among the people, new and valuable seeds and plants.

"That there shall be appointed by the President, by and with the advice and consent of the Senate, a 'Commissioner of Agriculture,' who shall be the chief executive officer of the Department of Agriculture.

"That it shall be the duty of the Commissioner of Agriculture to acquire and preserve in his department, all information concerning agriculture which he can obtain by means of books and correspondence, and by practical and scientific experiments, (accurate records of which experiments shall be kept in his office,) by the collection of statistics and by other appropriate means within his power; to collect, as he may be able, new and valuable seeds and plants, to test by cultivation the value of such of them as may require such tests; to propagate such as may be worthy of propagation, and to distribute them among agriculturists."

In pursuance of this act the Bureau of Agriculture, heretofore conducted under the direction of the Commissioner of Patents, has been abolished, and all matters pertaining thereto transferred to the Department of Agriculture established by said act, and the undersigned duly appointed commissioner of the new department.

With the view of carrying into effect the beneficient and important ends contemplated by its organization, I solicit the co-operation of the farmers and friends of agriculture as well as of agricultural societies in every part of the country. Their experience in farming will render their correspondence with this department exceedingly desirable, and will greatly assist in promoting the ends proposed by Congress in establishing the same.

I am also desirous of securing the comity and friendly co-operation of foreign nations, and their scientific, agricultural and economical societies, on the basis of a reciprocal exchange of seeds, plants and animals, as well as of documents, reports, and transactions relating to agriculture and its kindred pursuits.

Without entering, on the present occasion, into any details in respect to the multifarious known products of the flora and fauna of foreign countries, which it is desirable to introduce and naturalize in this country, information and contributions are respectfully solicited on *grape culture* and the manufacture of wines; *silk culture* generally, and the Chinese varieties of the silk-worm that feed upon the leaves of the ailanthus, palma christi, oak leaf, and ash; new varieties of cereals and grasses; fibrous yielding and textile plants: improved breed of animals, valuable for their fleece, flesh, and other qualities; *fish culture* and valuable varieties of European fish, that do not naturally inhabit our rivers and lakes; *birds* useful for their eggs, feathers and flesh; best mode of *protection against predatory birds and insects* injurious to our crops of cereals, fruit, or timber; new fertilizers, irrigation, draining, &c., &c.

It is believed that no region of earth so extended enjoys a climate and soil so well adapted to so large a variety of valuable products as that part of the United States lying east of the Rocky Mountains. Indian corn, so generally cultivated in every state and territory of the Union, and many tropical fruits and vegetables, ripen in great perfection, and all agricultural and horticultural crops, from the grains, grapes, vegetables, and fruits of the North, to the sugar-cane, cotton, tobacco, rice, figs, oranges, &c., of the South, are produced in such perfection, side by side, as they do not attain elsewhere. The Rocky Mountain ranges, with their intermediate plains and Pacific valleys, present, among much that is barren, many spots that will compare favorably with some of the most fertile soils of the earth.

We consider agriculture the chief basis of our national wealth, power, and aggrandizement. About two-thirds of our population, in times of peace, are employed either directly or indirectly in farming and the pursuits connected therewith. Our farmers constitute the most influential and patriotic class of the country, among whom are to be found many of our eminent statesmen and most distinguished citizens. As a body they are generally men of good education and intelligence, owning the farms they occupy and cultivate. There is a spirit of emulation among them to keep pace with all new improvements and processes in husbandry, and the cultivation of any new and valuable plant, fruit or flower. This spirit is fostered and promoted by the national as well as state and county agricultural societies, farmers' clubs, and annual exhibitions; and by extensive circulation of agricultural journals throughout the rural districts.

We annex, for your information, a comprehensive tabular statement of the population, agricultural and mineral products, fiscal resources, &c., of the United States in 1860, as derived from official sources, from which it appears that the ratio of increase of our principal agricultural and mineral products, &c., has more than kept pace with the increase of population. New plants and improved breeds of animals have been successfully introduced in the last ten years. The sorghum, transplanted from China, yielded over *seven millions two hundred and fifty-five thousand* gallons of molasses in the year 1860, and the estimated yield for 1862 is about *twelve million gallons*.

To exhibit the vast variety and extent of our national resources would require more space than this circular will admit.

In the last census report it is asserted, with confidence, that our new inventions and improvements in labor-saving machinery and mechanical appliances have been more rapid than those of any other agricultural people; mechanical power has wrought a revolution in nearly every department of our rural industry.

Our government has recommended the practicability of preparing flax and hemp as a substitute for cotton. Results of the most important character to the manufacturing interests of the United States are promised by the perfection of this valuable invention for making from unrotted flax a substance resembling cotton.

The unequaled wealth and rapid development of the coal fields of the United States, as a dynamic element in our industrial progress, afford one of the most striking evidences of our recent advance.

With regard to our mineral products, it may be remarked that in most of the states they are inexhaustible, though but partially developed in either.

Pennsylvania may safely be rated as the richest in coal, iron, nickel, and zinc. In pig iron she makes sixty two per cent. of the *quantity* and fifty-eight per cent. of the value of the whole productions of the United States. In bar and rolled iron the production of Pennsylvania in 1860 exceeded *two hundred and fifty-nine thousand tons*. The production of the recently discovered petroleum or coal oil is estimated at *six thousand barrels per diem*, and the wells appear to be inexhaustible.

Virginia abounds in mineral wealth—iron, coal, salt, copper, and gold—in fact, her resources may be set down as inexhaustible, though in a great measure undeveloped. With a soil and climate adapted to every branch of industry, and with her superior water power, she is capable (under the direction of capital and enterprise) of becoming one of the foremost states in the country.

California so distinguished for the great variety and value of its agricultural productions, is the richest country in gold, silver, and quicksilver perhaps known. In addition to its numerous productive mines and placers, which have yielded over *six hundred million dollars* since 1848, rich and inexhaustible mines of silver have recently been discovered and worked, and also productive mines of quicksilver. Rich copper and coal mines have been struck on a late survey, as well as valuable tin mines. The silver mines of the Territory of Nevada have also yielded large returns. Arizona and New Mexico possess inexhaustible stores of undeveloped mineral wealth. Oregon and Kansas are gold producing states. The returns of gold and silver from Utah are annually on the increase. The Territory of Colorado yields such a large and increasing supply of gold that it is contemplated to establish an assay office or mint at Denver City. The mints and assay offices of the United States have annually received, between 1854 and 1861, considerable amounts of gold from the mines in Virginia, North Carolina, South Carolina, Georgia, Alabama, and Tennessee.

Possessing such abounding and inexhaustible resources, our national government, which enjoys the confidence of twenty-two millions of the population of our free states, has been enabled to raise, equip, and maintain an army of a million of free men; create a formidable navy of iron-clad steamers for the suppression of the existing rebellion in the cotton states, and to uphold and perpetuate the integrity and supremacy of the FEDERAL UNION. Our capitalists and citizens in the free states have loaned the United States treasury ample funds to carry on the war, which, there is every reason to believe, will soon be brought to a successful termination without the necessity of resorting to foreign loans. A new tariff for raising revenue, with a well devised system of internal duties and taxes, has been provided by Congress for the punctual payment of the interest and the early redemption of the national debt.

In despite of the rebellion every branch of national industry, enterprise, internal trade and traffic is flourishing in our free states, while our foreign commerce, participating in the general prosperity, is receiving an extraordinary impulse from the superabundant crops of cereals, provisions, &c., now coming forward for shipment to Europe.

An act of Congress of the 20th of May, 1862, entitled "An act to secure homesteads to actual settlers on the public domain," among other things provides that any emigrant or foreigner, the head of a family, who has attained the age of 21 years, on making a declaration of his intention to become a citizen of the United States, is authorized to enter a quarter of a section (160 acres) of land, or less, subject to pre-emption, at $1.25 per acre; or for 80 acres, or less, at $2.25 per acre, from and after 1st January, 1863. Emigrants and foreigners who have not been naturalized are exempt from military duty and not allowed to be enlisted in our military service. *One hundred and thirty-four million two hundred and eighty-thousand three hundred and thirty* acres of public lands have been surveyed and are ready for sale.

The President of the United States and heads of departments are prohibited by law from receiving presents from foreign governments. It is therefore respectfully suggested that in future all tokens of amity from foreign states, intended for any of the high functionaries of our government, consist of some valuable plants, shrub, flower, tree, animal, or other interesting object of agricultural utility, to be addressed to the Department of Agriculture, by which such present will be promptly and thankfully acknowledged. It is not from this source alone, however, that I hope this department will be enriched with tokens of amity from foreign countries. I earnestly solicit from all agricultural societies, and from individuals engaged in farming, the transmission of seeds and plants, and of facts and information generally relating to scientific and practical farming, assuring them that their endeavors to promote the common ends which we have in view will be highly appreciated.

The commissioner is authorized to receive, through the mails, free of charge, all communications and other matters pertaining to the business of the department, not exceeding in weight *thirty-two ounces*. They should be addressed to the "Commissioner of the Department of Agriculture, Washington, D. C.," either direct or in care of any United States minister or consul resident abroad, or officer of the United States navy at any foreign port or station, or through any agent of the Smithsonian Institute in Europe.

Seeds in large quantities should be carefully put up in sacks and placed in boxes or barrels, open to ventilation, to prevent fermentation. Slips or cuttings, and tubers, must be packed in air-tight boxes. In all cases it is recommended to write by mail in advance, stating the manner in which the parcels are sent and to whom they are consigned.

Assured that the proposed international exchange is calculated to increase the intercourse and strengthen the friendly relations now so happily subsisting between our respective governments, and give a new impulse to the great agricultural, productive, and material interests of all nations, invoking your cordial and effective co-operation herein, I have the honor to be, very respectfully, your obedient servant,

ISAAC NEWTON, Commissioner.

A tabular statement of the Population, value of Real and Personal Property. Aggregate Agricultural and Mineral Products, and Fiscal Resources of the United States, chiefly condensed from the Preliminary report of the eighth United States census, latest Treasury and Patent Office reports, and other official sources.

POPULATION, AREA, AND AGRICULTURAL PRODUCTIONS, &c.

Population, white	26,975,575
Population, free colored	487,996
Population, slaves	3,953,760
Total including Indians	31,749,281
Area of the United States, sq. miles.	3,250,000
Aggregate of real and personal property, dollars	16,159,616,068
Value of productions of industry do.	1,900,000,000
Cash value of farms, do	6,650,872,507
Cash value of farming implements and machinery, do	247,027,496
Value of live stock, do	1,107,490,216
Value of lands improved, do	163,261,389
Value of lands unimproved, do	246,508,244
Wheat crop, bushel	171,183,381
Rye crop, do	20,976,286
Indian corn, do	830,451,707
Oat crop, do	172,554,688
Rice, pounds	187,140,173
Tobacco, do	429,390,771
Ginned cotton, bales, 400 lbs	5,198,077
Wool, pounds	60,511,343
Peas and beans, bushels	15,188,013
Irish potatoes, do	110,571,201
Sweet potatoes, do	41,606,302
Barley, do	15,635,119
Buckwheat, do	17,664,914
Value of orchard products, dols.	19,759,361
Wine, gallons	1,800,008
Productions of market gardens, dols.	15,541,027
Butter, pounds	400,509,854

For the construction of a railroad, with branches, from the Mississippi river to the Pacific ocean, about, miles	1,800
In aid of this colossal enterprise Congress has made a very liberal donation, by grants of public lands lying on the route, and a loan of thirty years six per cent. United States bonds, to the amount of about, dollars	60,000,000

EDUCATIONAL.

The number of principal colleges and professional schools in the United States, including theological law, and medical, in 1860, was 238. By an act of Congress of July 2, 1862, about 10,000,000 acres of public lands were appropriated for the support of colleges and schools for the benefit of agriculture and the mechanic arts in the several states and territories of the Union. Five millions of persons received instruction in the educational institutions of the United States in the year ending June, 1860. The system of common school education has been adopted in nearly all the free states.

New York Canals.

The quantity of flour, wheat, corn, and barley left at tide water from the commencement of navigation to the 30th November inclusive, during the years 1861 and 1862, was as follows:

	Flour, bbls.	Wheat, bush.	Corn, bush.	Barley, bush.
1861..	1,414,831	28,749,060	22,157,221	2,036,110
1862..	1,628,727	31,126,496	21,531,470	1,969,610
Inc....	213,893	2,377,436	*625,751	66,466

*Decrease.

By reducing the wheat to flour, the quantity of the latter left at tide water this year, compared with the corresponding period last year, shows an increase of 689,380 bbls. flour.

The following comparative table shows the quantity of some of the principal articles of produce left at tide water from the commencement of navigation to and including the 30th of November in the years indicated:

	1860.	1861.	1862.
Canals opened.	April 25.	May 1.	May 1.
Flour, bbls.....	1,133,898	1,414,834	1,622,727
Wheat, bush. ..	17,002,883	28,748,060	31,126,496
Corn.....	14,079,679	22,157,221	21,531,470
Barley	2,900,958	2,036,115	1,969,649
Oats	6,414,250	5,332,025	5,233,166
Rye.....	320,515	740,028	742,477
Beef, bbls	11,295	19,442	51,230
Pork.	7,487	9,417	163,810
Bacon, lbs.....	458,464	626,200	5,925,196
Butter.....	2,309,529	3,582,658	5,305,021
Lard.....	1,005,985	1,013,593	9,214,093
Cheese	11,921,221	9,496,260	8,220,881
Wool.....	2,035,679	1,720,183	1,796,658

We have no returns from the Waterford office for the fourth week in November. The receipts of barley at that point for the week are estimated at 40,000 bushels.

Railways in Italy.

The Railway system of Italy under the present enlightened Government is assuming grand proportions. Count Bastogi is the contractor to whom an extensive network of lines has been conceded.

"1. A grand line, starting from Ancona, skirting the Adriatic, and serving Pescara, Termoli, Foggia, Barietta, Bari, Brindisi, and Lucca, with a branch from Bari to Taranto on the Ionian Sea, which together will form an extent of 750 kilometres, or 468 English miles. 2. A branch line from Foggia, passing by Ascoli, Cauza, and Eboli, as far as Salerno, where it joins the line already constructed to Naples. Length about 181 kilometres, or 113 miles. 3. A branch line starting from Ceprano (where it meets the line already constructed from Rome to Naples,) by Sora, Celano, Sulmona, and Popoli to Pescara, about 231 kilometres, or 145 miles. 4. A branch of 28 kilometres, or 17½ miles, from Voghera to Pavia; and, 5. Another branch of 167 kilometres, or 104 miles, from Pavia to Brescia, passing by Cremona. As to this branch, however, the Lombard and the Central of Italy Company claim a right of preference by reason of a previous concession. The extent of the lines to be constructed is 1,357 kilometres, or about 848 miles."

Letters from Turin state that the first call of 150f. (6l.) per share on the whole amount of the shares of the Neapolitan Railways has been paid, and that the proceeds (1,200,000l.) have been deposited by Count Bastogi in the Royal Treasury in Turin at call, at the rate of 4½ per cent. per annum. The statutes of the company have been confirmed by the Government, and a general meeting of the shareholders is to be held shortly to name the board of directors. Mr. Grattoni, the engineer, who is carrying out the tunnel of the Mont Cenis, has been appointed engineer in chief of the company. A portion of the line, about 350 kilometres, is already in course of construction, and it is added that the section between Ancona and Peschiera is expected to be opened for traffic in February next.

G. A. LILLIENDAHL,
3m41 **62 John street, New York.**

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,
HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in ums of
$50, $100, $500 and $1,000.
The Registered Bonds in sums of
$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

☞ U. S. SECURITIES of all classes BOUGHT and SOLD. RELIABLE INVESTMENTS MADE FOR ESTATES.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000, and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVE**[N] of any in the market; BAKES PERFECTLY, never [b]urning to brown at the bottom; BOILS, ROASTS and and BR[OI]LS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL,** which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1859, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.

J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

FOR CARS, TRUCKS, and TENDERS.
CHILLED
Driving Wheels and Tires
FOR LOCOMOTIVES.
ROLLED AND HAMMERED AXLES
WHEELS and AXLES,
FITTED COMPLETE.

G. G. LOBDELL. H. S. McCOMBS. D. P. BUSH
BUSH & LOBDELL,
WILMINGTON, DELAWARE,
MANUFACTURERS OF
CHILLED WHEELS
AND
TIRES,
FOR RAILROAD CARS
AND
Locomotive Engines,
ARE PREPARED TO EXECUTE PROMPTLY
ORDERS TO ANY EXTENT FOR THEIR
CELEBRATED WHEELS,
EITHER SINGLE OR DOUBLE PLATE,
WITH OR WITHOUT AXLES.
WHEELS FITTED
To HAMMERED or ROLLED AXLES,
IN THE BEST MANNER, AT THE SHORTEST NOTICE,
AND ON THE MOST REASONABLE TERMS.

RAILROAD IRON.

THE UNDERSIGNED are prepared to contract for the sale of
RAILROAD IRON
on advantageous terms, delivered at ports of England, Wales, or the United States.

MEAD & BELL,
13 Cliff Street, N. Y.

RAILROAD IRON.

ENGLISH and AMERICAN Railroad Iron for delivery in New York and other markets in the United States and England. Contracts negotiated by

E. A. & S. W. HOPKINS,
70 Beaver st., New York.

RAILROAD IRON.

THE
RENSSELAER IRON COMPANY,
TROY, N. Y.,

OFFER RAILS of their own manufacture deliverable as may be desired by purchasers.

OLD RAILS
received in exchange for new, or for re-manufacturing.

JOHN A. GRISWOLD, Agent,
TROY, N. Y.

New York Agency:
BUSSING, CROCKER & CO.,
32 Cliff st.

RAILROAD IRON.

THE undersigned, agents for the manufacturers, are prepared to make **CONTRACTS FOR RAILS** delivered free on board at ports in England, or exship at ports in the United States

M. K. JESUP & COMP'Y,
44 Exchange Place.
New York, 1st June, 1859.

RAILROAD IRON.

3,400 TONS BEST QUALITY WE SH RAILS—T pattern—53 lbs. per lineal y ard, for sale by

CHAS. L. PERKINS, or
E. LIVINGSTON,
3m15 **54 Exchange Place.**

MORRIS, WHEELER & CO.,
SUCCESSORS TO
MORRIS & JONES & CO.,
IRON MERCHANTS,
MARKET AND SIXTEENTH STREETS,
PHILADELPHIA.
IRON AND STEEL
IN ALL THEIR VARIETIES.
BOILER PLATE; CAR AXLES,
BOILER RIVETS, RAILROAD IRON,
CUT NAILS and SPIKES, PIG IRON, etc.

Having the selling agency of a number of the Rolling Mills, Furnaces and Forges in this State, **orders for any description of IRON** can be executed.

☞ We have been obliged to leave out a number of interesting articles in order to make room for the lengthy Report of MR. CHASE. We shall make amends for the omission in our next.

British Railways, in Contrast with our own.

Whenever there springs up an idea which reduced to practice, advances the public interests and rewards its promoters, there are sure to be a rapid development and large results. When railways were first projected in England, the opposition was formidable, but their friends persisted and were successful. Even the *Quarterly Review* as late as 1825 declared that "the gross exaggerations of the powers of the locomotive steam engine, or to speak in plain English, the steam carriage, might delude for a time but must end in the mortification of all concerned." Yet the idea, followed by a most brilliant success carried all before it and changed the face of the world.

There are now about nine thousand miles of railways in operation in the United Kingdom, but in the United States more than thirty thousand. So that with a larger territory to traverse, our enterprise has been fully equal to the field open to it. Nothing is too great for American apprehension. We have, however, had many advantages in the competition of progress over our English friends. One of the greatest difficulties in their way is the enormous expense of obtaining acts of Parliament authorizing the construction of railways. The process is tedious. The bills, after they are introduced, are subjected to a long and tedious examination before committees, often running through whole sessions, and legal assistance paid for at enormous rates is necessary every step of the way. Mr. Stephenson, the eminent engineer, said that it cost almost as much to obtain permission to make a road, as it did to construct it. Thus for example it cost the Great Northern, three millions eight hundred and fifteen thousand dollars to obtain the sanction of Parliament to construct a line only two hundred and forty-five miles long. In this country we escape all such expenses, and all such legal formalities and delays producing them. There, often one-fourth of the whole capital is sunk before a sod is turned. We may then claim for our own system of railway legislation simplicity, directness and economy. It is not necessary to expend any large amount for law or legal assistance, before a bill is in a shape to become a law.

The expense of construction in Great Britain has also been enormous in comparison with that in our own country. The average cost of construction in the former up to 1848 was $175,000 per mile, and since that time $40,000, while here it has been but about $30,000. There was, however, one remarkable exception in the case of the Peebles Railway, a single line of twenty-one miles in length, an auxiliary of the North British Railway at Estbank in Scotland, worthy of being noted, and it may serve as a hint to our engineers. The actual works themselves, the road, plant, etc., did not cost more than $18,000 per mile. In this country the right of way costs but little, and the owners of the ground over which a railway passes are in general wise enough to accept any fair remuneration. If not, we have a simple process of ascertaining the value in dispute. English land holders have it in their power to make their own terms, through their ability to obstruct the necessary proceedings in Parliament. One English nobleman Lord Petrie obtained one hundred and twenty thousand pounds from the Eastern Counties Railway before it could pass through his property, though the land taken was actually worth but four thousand pounds, and the residue became greatly enhanced in value by its construction.

So too the legislation in Great Britain is so complex and multitudinous on the subject of railways, that the whole system is embarrassed by the conflict of legal provisions. The London and North Western is said to be regulated by no less than one hundred and eighty-six different acts of Parliament.

As to the management of these companies, there has been as much to complain of abroad as there is with us, and precisely for the same reason. The *Westminster Review* for October says "We are perfectly aware that the management of our railways is a public scandal," and the shareholders who are the principal sufferers "are principally to blame for this." It even says "that a bad director" is generally a popular man! The secret of railway success is in the diminution of expenses, and to ensure this absolutely, it maintains the officials who have the immediate management of a line should have a direct interest in the prosperity of the company, and a proportion of the net profits after the payment of dividend. We have heard this principle approved by one of the best railway managers we have in this country, and it has been tried successfully on the Paris and Orleans Railroad. In 1859, four hundred and eighteen thousand dollars beyond the regular salaries were paid rateably to the officers and servants of that Company, after the stockholders' dividend of 20 per cent. had been received. Whether this plan will ever be adopted in this country, is uncertain, but it is worthy of profound consideration.

In the meantime, nothing but careful management will do for our railway system, the very first talent should be placed in control, and the most liberal salaries paid where such talent produces the required results. We may see how much has been done for the Erie since

its working fell into competent hands, and there are other instances among the Western roads equally as brilliant. We have several times alluded to the Harlem as another example. In the formal details of train management we are perhaps behind the English. Every thing there is like clock work. The servants of the company as they are called, wear an official dress, are always in their places, and are ready at every call. Here we cannot tell a brakeman or conductor or a baggageman from a passenger. It is difficult to find any one to whom an important question may be addressed, perhaps involving the loss of luggage, or separation from comrades, or taking the wrong rail. In our system of checking for luggage and its delivery at destination we are far ahead of the English. One may check his trunk at New York for Chicago, and give himself no thought for it until he reaches that paradise of travelers, the Sherman House. The unhappy man who lands at any London station, after a long ride, has more difficulty in repossessing himself of his luggage than an American traveler can well conceive.

In respect to the structure of our cars we are decidedly in advance. The English little lock-up coaches on four wheels, resemble in their interior, it is true, the luxurious coach of the old highways, but are not as convenient, or safe, or as comfortable as our roomy and well ventilated cars. The English have not as yet adopted the American plan of sleeping cars, though strange to say an adventurous countryman of ours, has succeeded in introducing them upon at least one of the great East Indian Railways. This apparent anomaly, however, may be explained, when we reflect that in the Indies, most of the long journeys of the Europeans are taken at night, and they sleep in the vehicles which carry them forward from one station to another, whether borne by men or drawn by beasts.

Our plan of running cars safely around short curves by means of the moveable truck has not yet been generally adopted abroad, and will not be till the short coaches go out of fashion.

In the street railway system the great cities of Europe are far behind ours. No local improvement can be compared to this, in its effects on the prosperity of large towns. It has been sturdily resisted in London, with a pertinacity quite astonishing, and yet perhaps not so unexpectedly after all, when we remember how the first English railways and the first locomotives were assailed.

A question has now arisen there whether the wheels of cars should not be made to revolve independently of the axis instead of being rigidly fastened to it as at present; and whether springs may not be applied to the seats so as to reduce the amount of vibration and jolting. So too an immense variety of locomotives is under examination, in the expectation of reaching at once the limits of human skill. A double cylinder, or rather a four cylinder engine, working in couples, by an Austrian inventor has attracted great attention, and the traction engines of Mesrs. Boydell & Bray are reported as coming into use, for common earth roads. One of them recently sent to Brazil actually ascended the mountain on which the city of Petropolis stands, three thousand feet above the level of the sea, and by an ordinary carriage road. These engines can freight ordinary goods on ordinary roads in England at 8 cents per ton per mile. The principle of the Boydell engine is that it carries and lays down its own rail; that of Bray's is that it has moveable points or blades which can be made to push into the ground and hold the wheel firmly to it while it is revolving.

These are spoken of very highly and are much used about the Government arsenals. If it be true that it cost Taylor & Son forty dollars to remove each single paving stone 700 feet from the dock to their new brewery in this city, we imagine a traction engine might make money along our wharves, in this heavy kind of work. So also in our large fortifications for the removal of heavy cannon.

Those who desire to read an interesting article on the cost and profits of English railways will do well to get the October number of the *Westminster Review*, published by L. Scott & Co., the well known publishers of the American reprints of the four great British Quarterlies. We are indebted to them for the article which has suggested the foregoing remarks.

The New York Central Railroad Company has declared a semi-annual dividend of 3½ per cent., payable on the 20th of February.

A Novel Case; Destruction of Fruit Trees by a Locomotive.

REAL ESTATE; WHAT THIS TERM INCLUDES. THE VALUE OF FRUIT TREES MAY BE ESTIMATED, BY COMPETENT WITNESSES, SEPARATELY FROM THE GROUND ON WHICH THEY STAND.

A novel case was recently argued before the Monroe General Term of the N. Y. Supreme Court, in which one Whitbeck was plaintiff, and the New York Central Railroad Co., was defendant. The action was brought to recover compensation for injuries sustained by the plaintiff, by reason of the burning of his clover field and apple trees situated thereon, in the town of Pittsford. The fire originated at the track of the defendant's railroad in Pittsford, and was caused by the dropping of coals from the locomotive, upon the dry grass on the track.

The question in the case was as to the measure of damages which should be applied in order to estimate the plaintiff's loss. The term Real Estate is defined in law to mean, not only the ground or soil, but the things which grow thereon as trees, shrubbery, &c., and also buildings, as houses, barns, or any kind of edifice that may be erected upon land. The defendant therefore contended that the true rule for estimating the damages, was, the difference in the value of *the land*, before and after the fire. But the plaintiff maintained that the *frnit trees on the land* had a value separate from the ground on which they stood, and this value could be readily computed by competent witness; and for the purpose of fixing the amount of the injury done, this was the true rule.

Upon the trial at the Circuit, a witness for the plaintiff in answer to the question, what in his opinion, "these trees were worth upon that land?" said, "It depends upon the kind; I should think $20 per tree; the way I estimate property, generally is, what per centage it will pay over and above expenses; and trees of the age described, with six years heads upon them, would pay from year to year the interest of more than twenty dollars a year; the fruit would be worth about 75 cents per barrel." This question was objected to by the defendant's counsel, on the ground that the trees were a part of the real estate, and the true measure of damages, so far as the destruction of the trees were concerned, was the difference in value of the lot, as a whole, in which the trees grew, before and after the fire; and also because the witness had no knowledge in regard to these particular trees. The Court overruled the objection. The judge charged the jury, that in arriving at the value of the damage, they were to use their own judgment upon all the evidence, and assess the value of the property destroyed. That if the plaintiff was entitled to recover for the trees, he was entitled to their value on that land, at the time they were destroyed, together with interest on such value from the time they were destroyed. To this the defendant's counsel excepted.

The jury rendered a verdict in favor of the plaintiff for $650, and the defendant appealed to the General Term, which now held, that the true rule of damages in such cases, is, that if the thing destroyed, although it is a part of the reality, has a value which can be accurately measured and ascertained, without reference to the value of the soil on which it stands, or out of which it grows, the recovery must be for the value of the thing thus destroyed, and not for the difference in the value of the land before, and after such destruction. The following opinion was rendered at the decision of the case.

Johnson, J.—The only question in this case of any importance, is in respect to the damages which the plaintiff was entitled to recover for the fruit trees destroyed by the fire. I am of the opinion that the judge at the Circuit was clearly right in instructing the jury that the plaintiff was entitled to recover the value of the trees, as they stood upon his land, at the time of the fire, if he was entitled to recover at all. The object of an action of this kind is to obtain compensation for an actual loss; and this end is perfectly attained when the value of the thing destroyed is recovered by the owner. The defendant's counsel requested the judge to instruct the jury, that the plaintiff could only recover the diminished value of the orchard lot, by reason of the destruction of the trees. This the judge refused, and I think rightly. It is true that the trees in question were real estate, and in one sense, part and parcel of the land itself. But so are buildings and fences, and grass, and trees of all kinds while growing upon the land. The true rule I conceive to be this; that if the thing destroyed, although it is part of the realty, has a value which can be accurately measured and ascertained, without reference to the value of the soil in which it stands, or out of which it grows, the recovery must be for the

value of the thing thus destroyed, and not for the difference in the value of the land before and after such destruction. And it can make no difference in this respect, whether the action is brought to recover for the destruction of a single tree, or all the trees in an orchard. There is no intrinsic difficulty as I conceive, in estimating the value of a fruit tree growing upon land, although it has strictly no commercial value, as a tree, independent of the land which sustains it. In this respect, however, it does not differ materially from buildings and other fixtures. But it does differ from trees which are usually converted into timber, or fire wood, and which are frequently sold as they stand, for that purpose, or nursery trees which are grown for market. The difference is this: In the one case the value consists chiefly in the thing itself, as a convertible and marketable commodity, while in the other, the value consists chiefly in the quality and quantity of its average annual products, and it is capable of being leased, as much as a field or a dwelling. The calculation by which the value would be determined in the two cases would be somewhat different, but for aught, I can see, it could be determined by the opinion of competent witnesses in the one case as well as in the other.

The objection to proving the value of the trees in question by the opinion of the witness, Cook, was not I think, well taken, if the witness was competent to give an opinion upon the subject. It was objected by the defendant's counsel, that the witness had no knowledge of these particular trees, and was therefore incompetent, even if opinion was competent evidence by which to establish value.

The witness was shown I think, to be qualified to express an opinion on the subject. He lived in the same town, was a nurseryman, and well acquainted with the fruit business, and had heard the plaintiff testify in relation to the kind, quality and product of the trees, but had no particular recollection of the orchard, although he thought he had seen it.

It was not necessary that he should actually have seen, or been familiarly acquainted with the trees in question. It was enough that he was acquainted with the fruit business in that neighborhood, and the value of similar property there. He was, I think, as competent to express an opinion in respect to the value of trees, after learning from other witnesses what kind of trees they were, and the quality and amount of fruit yielded by them, generally, as he would have been to express an opinion as to the value of the fruit per barrel, after ascertaining its condition and quality. The opinion, perhaps, would not be as satisfactory in the one case as the other, but if it was competent as evidence, that is enough.

I am of the opinion that there was no error either in the charge, or in the refusal to charge, as requested, or in the rulings upon the trial, and that the judgment should be affirmed.

Judgment affirmed.

Grain Elevators.

The Harbor Commissioners of Quebec have been instituting careful inquiries on the subject of Grain elevators, and the result of a report made by their consulting Engineer, G. L. Reid Esq., is that they cannot be used successfully anywhere except in basins of still water. Any violence of the waves moving a barge or other vessel at right angles to the elevating trunk, breaks it at the head and renders it perfectly unmanageable.

Report of the Secretary of the Treasury.

This is an able and frank exposition of the condition of the finances, and resources of the country. We give below copious extracts from the document, which embrace every material point, omitting none in fact of importance.

After accounting in his introduction for the difference between his previous estimates and the results, occasioned by unforseen exigencies, he says it is not possible for him to anticipate all the necessities of war or of legislation, and the estimates must again prove inadequate.

The increase of the army, however, did not greatly affect disbursements between the date of the December report and the close of the then current fiscal year. The increase of debt, therefore, did not exceed the December estimate. On the contrary, while the estimate anticipated a public debt on the 30th of June, 1862, of $517,372,802 93, its actual amount on that day was $514,211,371 92. This amount, of course, does not include unascertained claims, but only that debt the evidences of which exist in the Treasury, upon its books, or in the form of requisitions in favor of creditors or of disbursing officers. It is not probable, however, that at the date named these claims much, if at all, exceeded the balance in the Treasury, namely, $13,043,546 81.

But while the public debt on the 1st of July, 1862, did not reach the amount anticipated by the estimates, there is no room for the pleasing hope that the results of the current fiscal year or the next will exhibit a similar proportion. On the contrary, the estimate of the public debt on the 1st of July, 1863, heretofore submitted, must now be advanced, in view of the unexpected increase of expenditures, authorized and incurred or likely to be incurred, to $1,122,297,408 24; and on the supposition that the war may be continued with undiminished disbursements until the 1st of July, 1864, the debt likely to have been then incurred must be estimated at $1,744,685,586 80.

It has been the care of the Secretary to reduce the cost of the debt, in the form of interest, to the lowest possible amount, and it is a source of real satisfaction to him that he has been able, thus far, to confine it within very moderate limits. The first loans, being of a magnitude hitherto undreamed of in our market, were necessarily made at an interest which he regarded as high, though lenders strenuously insisted on higher; but large amounts are now obtained at five and four per cent.. while the circulation of United States notes constitutes practically a loan from the people to their government without interest. The average rate on the whole loan is thus reduced to four and three-fifths per cent. Whether a similar result may attend future loans must be determined partly by the legislation of Congress, partly by the conduct of the war and partly by the condition of the markets for money.

The aggregate receipts for the fiscal year 1862, from all sources, including the balance of $2,267,065 80 in the Treasury from the preceding year, were $583,885,247 06; and the aggregate expenditures $570,841,700 25; leaving a balance in the Treasury on the 1st day of July, 1862, of $13,043,546 81. From the receipts and expenditures should be deducted the amounts both received and disbursed within the year on account of permanent and temporary debt, amounting to $96,096,922 09; leaving the total of receipts not applied in payment of debt $487,788,324 97, and the total of current disbursements $474,744,778 16. As the amount of debt, so also the amount of the expenditures for the last year falls short of the estimates.

The actual receipts for the first quarter of the fiscal year, 1863, commencing July 1, 1862, appear from the books of the Treasury; the receipts for the three remaining quarters can only be estimated on the basis of appropriations made and asked for by the several departments. They have been and are estimated as follows:

For the 1st quarter the actual receipts from customs, internal duties, direct tax, lands, and all other sources, excluding the balance from last year of $13,043,546 81, were	$37,208,529 02
For the 2d, 3d and 4th quarters the estimated receipts from all sources are	143,286,816 58
Making the total of actual and estimated receipts, from ordinary sources and from the direct tax, during the year 1863	180,495,345 60
To this sum must be added sums already realized from loans in all forms, which amounted during the 1st quarter to	$114,458,821 02
And during the months of October and November, estimating for some of the last days of November, to	85,670,895 99
Making an amount already obtained from loans to the 1st of December, and applied in payment of current expenditure and principal and interest of public debt, of	200,129,717 01
And there must be added, also, the amount which will probably be hereafter realized from loans in all forms, under existing laws, namely	131,021,197 85
Making the total of receipts, actual and anticipated, under existing laws	511,646,259 96
On the other hand—	
For the 1st quarter of the fiscal year 1863, the actual expenditures were	111,084,447 40
For the 2d, 3d and 4th quarters the actual and estimated expenditures, under existing appropriations, including interest on public debt, are	672,843,841 78
And additional appropriations are asked for by the several departments, to meet deficiencies, to the amount of	109,418,032 80
Making the whole amount actually expended or estimated	893,346,321 48
To which must be added the estimate for payment of principal of public debt during the year, of	95,212,456 14
Making an aggregate, for all purposes, of	988,558,777 62

It is necessary to observe, however, that in the present state of the law the estimates of the departments always largely exceed expenditures. The law forbids the transfer of any part of an appropiation for one object or class of objects to another. Hence there is always a large balance of unexpended appropriations at the end of every fiscal year, which, after two years from the making of them, are carried to the credit of what is called the surplus fund.

It may be safely estimated, therefore, that, of the appropriations made and asked for, there will remain unexpended on the 30th of June, 1863, and should of course be deducted from the apparent aggregate of expenditure not less

than.....	$200,000,000 00
The deduction of this sum will leave us the true aggregate of the expenditure for the year...	788,558,777 62
But of this sum as already stated, there has been received and may be expected from customs, internal duties, and other ordinary sources...$180,495,345 60	
And from loans in all forms.....	331,150,914 36
Making an aggregate of realized and anticipated resources, to be deducted from the sum of actual and anticipated expenditures for all purposes, of.....	511,646,259 96
And leaving yet to be provided for the current year by the action of Congress.....	276,912,517 66

The estimates for the fiscal year, 1864, commencing on the 1st day of July next, and ending on the 30th day of June, 1864, must, in the present circumstances of the country, be, in great part, conjectural. The estimates of expenditures have been framed by the several departments on the supposition of the continuance of the war—supposition which, though very properly assumed as a basis of estimates intended to cover all contingencies, is not, it may be confidently hoped, destined to be realized. The estimates of receipts are based upon the operations of recently enacted laws, the working of which cannot be accurately foreseen.

The estimates of expenditures are as follows:

For the civil list, including foreign intercourse and miscellaneous expenses, other than on account of the public debt...	$25,081,510 08
For the Interior Department, Indians and pensions	10,346,577 01
For the War Department.....	738,829,146 80
For the Navy Department.....	68,257,255 01
For interest on public debt.....	33,513,890 50
For principal of public debt....	19,384,804 16
	895,413,183 56
To which sum should be added the expenditures for which appropriations made are estimated as remaining undrawn on the 1st of July, 1863	200,000,000 00
Making the aggregate of expenditures to the 1st of July, 1864, for which appropriations are made or asked.	1,095,413,183 56
From which should be deducted the probable amount of appropriations which will remain undrawn on the 1st of July, 1864.	250,000,000 00
Making the true amount of probable expenditures during the fiscal year, 1864.....	$845,413,183 56

The estimates of receipts are as follows:

From customs.....$70,000,000	
From internal duties.150,000,000	
From lands..... 25,000	
From miscellaneous sources 3,000,000	
Making the aggregate of receipts for the fiscal year, 1864, to be deducted from the aggregate of expenditures.....	223,025,000 00
And leaving the amount of expenditures of the fiscal year, 1864, to be provided for.....	622,388,183 56

The whole amount to be provided by Congress, beyond resources available under existing laws, may, therefore, upon the supposition of the continuance of the war, be stated as follows:

For the fiscal year 1863.....	276,912,517 66
For the fiscal year 1864.....	622,388,183 56
Making an aggregate of.....	$899,300,701 22

A tabular statement is submitted with this report, and as part of it, exhibiting clearly the details of the receipts and expenditures of the financial years 1862, 1863 and 1864.

With a view to the necessary provision for the expenditures then anticipated, the Secretary proposed to Congress, at its last session, such measures as seemed to him best adapted to the attainment of that object. These were (1st) an increase of duties on various imports; (2d) an increase of the direct tax; (3d) the levying of internal duties; (4th) a limited emission of United States notes, convertible into coin; (5th) the negotiation of loans, facilitated by the organization of banking associations, whose circulation should consist only of notes uniform in character, furnished by the government, and secured, as to convertibility into coin, by United States bonds deposited in the Treasury.

The banks of New York suspended on the 30th of December, 1861. Their example was followed by most of the banks throughout the country, and the government yielded to the same necessity in respect to the United States notes then in circulation.

These changed circumstances required a change of measures. The expenditures had already reached an average of nearly a million and a quarter of dollars each secular day; while the revenue from all sources hardly exceeded one tenth of that sum. It was necessary, therefore, to raise by loans in some form about thirty millions a month or sixty millions every sixty days.

Careful inquiries satisfied the Secretary that the first $60,000,000 could not be had, in coin, at better rates than a dollar in bonds for eighty cents in money; and that each succeeding loan would involve submission to increasingly disadvantageous terms. To obtain the first $60,000,000 would require, therefore, an issue of bonds to the amount of $75,000,000, and, of course, an increase of the public debt by the same sum; the next $60,000,000 would require, perhaps, $90,000,000 in bonds and debt; and the next $60,000,000, if obtainable at all, would require, perhaps, $120,000,000. It was easy to see that on this road utter discredit and paralysis would soon be reached. The adoption of a plan of finance involving such consequences was not compatible with the Secretary's ideas of public duty.

There remained but one other possible way of raising money by the negotiation of bonds in the usual mode. That way was, to receive in payment of loans the notes or credits of the banks in suspension.

To ascertain what would have been the consequences of a resort to this expedient, it is necessary to remember that the bank circulation of the loyal States amounted, on the 1st day of January, 1861, to $150,000,000; that it had been reduced to $130,000,000 on the 1st day of January, 1862; and that this circulation was diffused throughout the country in all the channels of business. In these circumstances the collection by loans of sufficient amounts to meet the demands upon the Treasury in season for prompt payments would be extremely difficult. The negotiations of such loans, to the extent required by the public exigencies, would create a demand for the notes which would involve the necessity, at first, of sacrifices not greatly inferior to those attendant on coin loans. If subsequent negotiations should become practicable at seemingly better rates, it would be because the government demand had stimulated the making and issuing of bank notes to an extent far beyond the ordinary needs of business. The increase of circulation thus stimulated would be unlimited, except by the possibility of obtaining interest on loans of it; or, in other words, by the possibility of obtaining credit for it with the community and the government. This limit, certain to be finally reached by all banks improvidently managed, would not, however, be reached immediately, or at the same time by all institutions, or by the same rate of progress in all parts of the country. But an excessive circulation would surely be thrust upon the community, forming a currency, everywhere, but irregularly depreciated, destined in part to become worthless, and certain to tax and derange, beyond measure, the business of the people, and to embarrass, if not arrest, the operations of the government. Loans negotiated in this circulation would be simply exchanges of the debts of the nation, bearing interest and certain to be paid, for the debts of a multitude of corporations, bearing no interest and certain, in part, never to be paid.

This is but a partial representation of the consequences apprehended from the receipt of bank notes for loans to the government. Their character made it impossible for the Secretary to recommend such negotiations, and wholly improbable that Congress would authorize them if recommended.

No other mode of providing, with any tolerable degree of promptitude, for the wants of the army ann navy, and the necessities of other branches of the public service, seemed likely to affect the object with so little public inconvenience and so considerable public advantage as the issue of Unted States notes adapted to circulation as money, and available, therefore, immediately in government payments.

An emission of $50,000,000 had been authorized by Congress at the July session, 1861, not with the design of furnishing a general currency, but for the purpose of making good many differences between the amounts obtained by loans and the sums required by the public service. Of these notes $33,460,000 were in circulation at the time of the suspension. Up to that date every note presented for payment had been promptly redeemed in coin. After the suspension an additional emission of $10,000,000 was authorized, on the 12th of last February. Both these issues, amounting together to $60,000,000, were made receivable for all public dues, including customs.

It now became the duty of Congress, not merely to provide the means of meeting the vast demands on the Treasury, but to create a currency with which, until the close of the war at least, loans and taxes might be paid to the government, debts to individuals discharged, and the business of the country transacted. Nothing less would satisfy the need of the time.

This duty Congress partially performed by authorizing an emission of $90,000,000 in United States notes, in addition to the $60,000,000 previously authorized, making $150,000,000 in all. The $90,000,000 last issued were made receivable for all national loans and dues, except customs, payment of which was required in specie or notes of the two first issues.

At a later period of the session, in view of the withdrawal of the sixty millions receivable for duties from circulation, and of the expediency of providing a permanent resource for meeting all demands upon temporary deposits in the Treasury, Congress authorized a further issue of $150,000,000, of which, however, $50,000,000 were to be reserved from issue until actually required for payment of deposits.

At a still later date Congress, upon the recommendation of the Secretary, authorized the use of postage and revenue stamps as a fractional currency, preferring this expedient to metallic tokens or coins reduced in value below existing standards.

These various acts, taken together, authorized the emission of two hundred and fifty millions of dollars in United States notes, and a further emission of fifty millions, if needed, for the payment of deposits. Of these emissions, the sixty millions receivable for customs were not available as circulation, but might be replaced, as paid in, by notes of the new issues which were thus available, so that, in the end, a total circulation of two hundred and fifty millions might be reached, and, in an improbable contingency, increased by fifty millions more. An emission of fractional currency, as just stated, was also authorized.

In aid of these provisions for public payments,

the Secretary recommended, and Congress, by different enactments, authorized, the receipt on temporary deposits, at an interest not exceeding five per cent., of such sums as might be offered, not exceeding, in the whole, one hundred millions of dollars, and the payment, to such creditors as might choose to receive them, of certificates of indebtedness, payable in one year and bearing six per cent. interest. Congress authorized the issue of national bonds to the amount of five hundred millions of dollars, into which the United States notes issued might be converted at the will of the holder. It was provided that these bonds should carry an interest of six per cent. in specie, and be redeemable after five and payable in twenty years. They have received the name of five-twenties or five twenty-sixes.

These measures have worked well. Their results have more than fulfilled the anticipations of the Secretary.

A short statement will exhibit the practical workings of the laws actually enacted.

To the 1st day of July, 1862, $57,926,116 57 had been received and were remaining on deposit. United States notes to the amount of $158,591,230 had been issued and were in circulation; $49,681,979 73 had been paid in certificates in indebtedness; and $208,345,291 86 had been paid in cash. Not a single requisition from any department upon the Treasury remained unanswered. Every audited and settled claim on the government, and every quartermaster's check for supplies furnished, which had reached the Treasury, had been met. And there remained in the Treasury a balance of $13,043,546 81.

The reverses of June, July and August, affected, of course injuriously this financial condition. The vast expenditures required by the large increase of the army, authorized by Congress and directed by the President, made exhausting demands on all available resources. The measures of Congress, however, enabled the Secretary to provide, if not fully, yet almost fully, for the constantly increasing disbusements. The actual payments other than for principal of public debt, during the quarter ending on the 30th of September, were, $111,084,446 75; during the month of October they were $19,243,846 04; and during the month of November, $59,847,077 34; while the accumulation of requisition beyond resources amounted to less than the fourth of the aggregate of these sums, namely, to $18,354,701 22.

It remains to consider what further resources for satisfying the debt now existing in the form of requisitions, and meeting other present and prospective demands upon the Treasury may be provided under existing legislation; additional measures may be beneficially adopted, for the improvement of the revenue and for the sure establishment of the public credit, by the discharge, with the greatest possible promptitude and punctuality, of all public obligations.

The whole power to borrow money under the act of July, 1861, to authorize a national loan, is now exhausted. The only important laws under which means for meeting demands on the Treasury can be had are those enacted or modified by Congress at its last session.

These are of two general classes, namely, those which provide revenue from duties and taxes, and those which authorize the obtaining of money by loans in various forms.

The laws of the first class are, (1st,) the several acts imposing duties on imports, and (2d.) the act to provide internal revenue.

The laws of the second class are, (1st,) the act authorizing the issue of United States notes, and of six per cent bonds of the United States, redeemable after five and payable in twenty years, to the amount of five hundred millions of dollars; (2d,) the two acts authorising the issue of certificates of indebtedness and the purchase of coin; (3d,) the act authorizing an additional issue of United States notes; and (4th,) the act authorizing payments in stamps.

The actual and estimated receipts under these laws for the current fiscal year, as already stated, will amount under the tariff act to $68,041,736 59, and under the internal revenue law to $85,456,803 73. The receipts for all other sources, exclusive of loans, as estimated, will reach $13,953,758 47, making a general aggregate, including $13,043,546 81, balance from last year, of $180,495,345 60, and leaving to be provided from loans, in some form, $608,063,432 02.

The laws of the second class limit the issue of United States notes, exclusive of the contingent reserve for deposits, to $250,000,000, and limit the amount receivable on temporary deposit to $100,000,000, and limit the issue of five-twenty sixes to $500,000,000. The issue of certificates of indebtedness and of fractional currency is unlimited by legislation.

The amount of United States notes, including notes receivable for customs, already issued and in circulation, or in the Treasury to the credit of disbursing officers or of the Treasurer, was, on the 1st instant, $222,932,111. There yet remains, therefore, under the law an authority to issue the further sum of $27,067,889. The amount received on deposit, including coin and estimating for the last day of November, is $79,798,650. The further sum of $20,201,350 may therefore yet be received. The issue of fractional currency has reached the sum of $3,881,800. The best lights lead to the estimate that before specie payments can be resumed not less than $40,000,000 will be required by the wants of the community. The sum of $36,115,200, not yet issued, may therefore be counted on as an additional resource. It is not easy to determine what further payments can be made in certificates of indebtedness, but it seems probable that payments in that form may be safely carried to the amount of $100,000.000. These payments have already reached $87,863,241 65, and the additional sum of $12,636,758 35 may therefore be paid in that way. What can be justly expected from conversions under the act authorizing the issue of five-twenty sixes, that is to say, from exchanges by holders of United States notes for these bonds, at par, cannot be stated with much certainty. The amount received from this source from the date of the act to the 1st, instant, estimating for part of the last week in November, is $23,750,000. It may reasonably be expected that thirty-five millions will be received, if the act remains unmodified, during the remainder of the fiscal year. The aggregate of all these sums, namely, $131,021,197 35, constitutes the total of resources available for the current year under existing laws, except through sales, regarded as impracticable under the act authorizing their issue, of the five-twenties at their market value.

These credit resources with the actual receipts from like sources, added to revenue in all forms may supply the Treasury with $511,646,259 96. There remains a balance of disbursements of $276,912,517 66 to be provided for.

How?

The easiest mode doubtless would be an issue of the required amount in United States notes; but such an issue, especially in the absence of proper restrictions on corporate circulation, would, in the judgement of the Secretary, be as injurious as it would be easy. The addition of so vast a volume to the existing circulation would convert a currency, of which the benefits have thus far greatly outweighed the inconveniences, into a positive calamity. Its consequences would be vast diminuti n of exports, inflation of prices, increase of expenditures, augmentation of debt, and, ultimately disastrous defeat of the very purposes sought to be attained by it.

To a certain extent, however, and under certain circumstances, a limited additional issue of United States notes may perhaps be safely and advantageously made.

The Secretary does not concur in the opinion entertained by some, whose ability and experience command deserved respect, that the aggregate currency of the country, composed of United States notes and notes of corporations, is at this moment greatly in excess of legitimate demands for its employment. Much less does he concur in another opinion, not unfrequently expressed but expressed in his judgement without due consideration, that any excess is due to the issues of United States notes already in circulation.

It is true that gold commands a premium in notes; in other words, that to purchase a given amount of gold a greater amount in notes is required. But it is also true that, on the suspension of specie payments and the substitution o. coin of United States notes convertible into six per cent. specie bonds as the legal standard of value, gold became an article of merchandise, subject to the ordinary fluctuations of mere speculation.

That this remarkable rise is not due wholly, or even in greatest part to the increase of the currency, is established beyond reasonable doubt by considerations now to be stated.

First—The whole quantity of circulation did not, at the time, greatly, if at all, exceed the legitimate demands of payments. On the 1st day of November, 1861, the circulation of United States notes, including credits to disbursing officers and to the Treasurer of the United States, was $15,140,000. On the 1st day of November, 1862, it was, with like inclusions, $210,104,000. Of corporate notes, on the 1st of November, 1861, the circulation in the loyal states was according to the best estimates $130,000,000; on the 1st of November, 1862, it was $167,000.000. The coin in circulation, including the coin in banks, was probably not less, on the 1st of November, 1861, than $210,000,000. On the 1st of November, 1862, the coin had been practically demonetized and withdrawn from use as currency or as a basis for currency, and is therefore not estimated. The aggregate circulation of the loyal states, therefore, was, at the first date, $355,140,000; and at the second only $377,104,000.

Secondly: The whole or nearly the whole, increase in the volume of the currency which has taken place was, it is believed, legitimately demanded by the changed condition of the country in the year between the two dates. The activity in business which, at the close of that year, had taken the place of the general stagnation which marked its beginning, and the military and naval preparations and movements which had vastly augmented the number and amounts of payments to be made in money, have, it is believed, legitimately demanded nearly or quite the whole of it.

That such is the case may be reasonably inferred from the fact that the prices of many of the most important articles of consumption have declined or not materially advanced during the year. Wheat, quoted at $1 38 to $1 45 per bu hel on the 1st of November, 1861, was quoted at $1 45 to $1 50 on the 1st of November, 1862. Prime mess pork, on the 1st of November, 1861, was quoted at $15 to $15, 50 per barrel, and on the 1st of November, 1862, at $12 50 to $13. Corn sold on the 1st of November, 1861, at 62 to 63 cents per bushel, and on the 1st of November, 1862, at 71 to 73 cents. A comparison between the prices of hay, beef and some other staples of domestic products at the two dates, exhibits similar conditions of actual depression in price or moderate rise.

Thirdly: It is, perhaps, still more conclusive against the theory of great redundancy that, on the 15th day of October, when the aggregate actual circulation, national and corporate, was about $360,000,000, the premium on gold was 37⅝; whereas, on the 29th day of November, when the circulation had increased by more than twenty millions, the premium on gold was 29 to 30 per cent.

But if the fact of considerable redundancy in circulation be conceded, it by no means follows that it is the circulation of United States notes which is redundant.

It must be remembered that the law confines national payments and receipts to coin and notes of the United States. Officers of the Treasury, officers of the army and navy, all officers of all departments, must observe and enforce this law. For all payments to be made in behalf of the United States, in case of inability to obtain coin, United States notes *must* be issued. It is, indeed, the duty of the legislature to see that the purchasing power of these notes is kept as nearly as

(Continued on p. 980.)

American Railroad Journal.

Saturday, December 13, 1862.

Stock and Money Market.

Since our last, we have received the report of the Secretary of the Treasury, and in this number the readers of the JOURNAL will find copious extracts embracing its most important features. It is an able document, and has the merit of looking the financial difficulties of the country boldly in the face. They are fully discussed, the involved questions are treated with impartiality and frankness, and it is now left to Congress to determine what measures are to be adopted. The first movement from that quarter is the following proposition from Mr. Stevens of Pennsylvania, in the shape of an introduced bill from the Committee of Ways and Means. It is asserted in some of the daily newspapers, that this bill is only the individual act of the Chairman. It reads as follows:

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the Secretary of the Treasury shall, as far as possible, redeem and call in the five-twenty bonds and all seven-thirty bonds which have been issued since the 4th of March, 1862, and cancel the same.

SEC. 2.—*And be it further enacted*, That the Secretary of the Treasury shall redeem all United States tender notes which shall be held as a loan bearing interest, and the law authorizing such loan or deposit is hereby repealed.

SEC. 3. *And be it further enacted*, That the law authorizing and requiring the payment of interest on United States bonds in gold, and which authorized the issuing of the five-twenty bonds, is hereby repealed.

SEC. 4. *And be it further enacted*, That, in

order to enable the Secretary of the Treasury to carry into effect the foregoing provisions, he is hereby authorized to issue $1,000,000,000, if so much be needed, of bonds of the United States similar in amount and form to those authorized by the act entitled "An act to authorize the issue of United States notes and for the redeeming or funding thereof, and for funding the floating debt of the United States," approved February 25, 1862, with interest payable semi-annually in the lawful money of the United States, and the principal payable in twenty years in gold or silver coin of the United States; also to issue legal tender notes of the United States, the amount not to exceed, with those already authorized, five hundred millions.

SEC. 5. *And be it further enacted*, That, instead of the bonds hereby authorized to be redeemed, the Secretary of the Treasury be authorized to exchange the bonds authorized by this act upon such terms as he may deem advantageous to the government, or pay them in legal tender notes.

SEC. 6. *And be it further enacted*, That, all banks, savings institutions or persons who have authority to issue notes as a currency shall pay a tax, to be assessed as other taxes, of fifty per centum on all their circulation which shall exceed one half of their capital paid in; provided that this section shall not go into operation until ninety days after the passage of this act.

SEC. 7. *And be it further enacted*, That whenever the government requires more money than is hereby provided, the Secretary of the Treasury may sell any portion of the billion of bonds hereby authorized at such price as he may be able to obtain for the same.

We do not propose at this time to enter into any discussion of the details of the Secretary's report, or of Mr. Stevens' bill. They require consideration, examination and reflection. What might be considered objectionable *per se*, may be found unavoidable as a part of an entire system. Nothing is complete in this world. Human wisdom has never yet devised any scheme that was complete. Perfection was never yet discovered on the continents of the East, and when we as a people had made the nearest approaches to it, a sad and unprovoked rebellion has dissipated our happy dreams, and we find ourselves actually struggling for national existence.

Therefore all other financial questions hinge on this one point. Shall the war be carried on, and will the people contribute directly and indirectly to furnish the means. If so in what way shall the funds be obtained. First by taxation. We all agree to this, and cheerfully. Next by borrowing what is deficient in the amount needed. Shall the Government borrow from the Banks? We have shown over and over again that they have not the means either in coin or circulation for this. They were put to the greatest difficulties only a short time since when called on by their creditors to pay them thirteen millions of dollars. And if they could by enabling acts be permitted to issue three times the amount of their present circulation, they would still be unable to supply bills enough for the expenses of the war. But even if this were allowed, what kind of a currency should we have. Bills of all sorts and descriptions, issued everywhere, payable everywhere, or rather nowhere, used with reluctance, passed at a discount, and furnishing to a particular class of money dealers the greatest possible opportunity for inordinate speculation.

Is it not then absolutely true, that we need a currency every where receivable at par on its face, and that is to be redeemed finally from the resources of this great nation, which possesses an aggregate wealth according to the late census of fixed real and personal property, with the annual value of agricultural products of more than thirty thousand millions of dollars. To this must be added, not being included in the foregoing statement, the value of our mineral products, gold, silver, nickel, lead, coal and of salt, one hundred and ten millions, and our railways twelve hundred millions more. We may go still further and add to these enormous sums, the value of our public lands, whatever conceivable amount we may estimate them at.

Now then shall we have money which is based on this capital or on that of the Banks, which have in this state, a fractional part of this wealth only, behind their circulation, or of banks in other states which have none at all, beyond the personal responsibility of the share holders? In this view of the subject can any sane man doubt as to the answer which should be given. Let the Government carry on the war with the national resources, and let it use the credit of the nation for a national purpose; in short for the preservation of the property, laws, rights and stability of the nation. Lose these and we lose every thing. Save these and we save every thing.

There is still another view of this subject. While the Government calls on the people for large supplies, and large credits, it gives back to them in its war expenditures every dollar it receives. This money does not go out of the country, it remains here and affords the means of meeting the demands made on our loyalty and patriotism. It is but a system of circulation on a large scale, from the Government to the people and the people to the Government, except that the latter uses large sums at once, and the people pay it back in small sums, and through a period of years. In this operation the people have a decided advantage. They get two millions a day, and are taxed to pay the principal at remote periods, and about 5 per cent per annum to pay the interest. In their hands therefore this vast amount of Government money remains, as so much capital in the interim, and this is the same advantage which British financiers have represented as the basis of British prosperity. The true danger to be apprehended here, as it has been felt there, is a tendency to speculation, which is produced by a plethora of currency. But as our foreign trade, with the heavy price of exchange against it, will not draw many ventures in that direction, we are not likely to get much in debt to any foreign nation. If our money is lost in speculation, it will be lost at home and leave its mark in new railways, steam navigation, new towns, villages and cities. We have that consolation before us at least. Here then we find the doctrine of equivalents, existing in the commercial as well as the moral world, and we should make the best of it.

Now if the Government trusts to loans such as it may with difficulty negotiate, it will have to sink at least from 25 to 40 per cent of the capital borrowed, and receive the proceeds in local currency in bank promises to pay, which never can be as diffusible, as trustworthy or as popular as Treasury notes, and cannot be used as capital, or a basis for extensive mercantile, manufacturing, agricultural operations. On the contrary it will produce general distrust and embarrassment.

In October, 1815, says a well informed cotemporary, Mr. Jefferson wrote to Mr. Gallatin his belief that this country could be carried through the longest war, against her most powerful enemy, without ever knowing the want of a dollar, without dependence on the traitorous class of her citizens, without bearing hard on the resources of the people, or loading the public with an *indefinite* burden of debt. This he said could be done "by the total prohibition of all private paper," "by reasonable taxes in war," and "by the necessary emissions of public paper, of circulating size, bottomed on special taxes."

In 1843 he wrote to Mr. Eppes a series of financial letters, from which we quote the following language:

"Bank paper must be suppressed, and the circulating medium must be restored to the nation to whom it belongs. It is the only fund on which they can rely for loans; it is the only resource which can never fail them, and it is an abundant one for every necessary purpose. Let banks continue if they please, but let them discount for cash alone, or for Treasury notes."

But we have his views still further on the quantitative character of the national currency in 1814. In a letter to the President in that year, he fixed the amount in his own mind at three hundred millions of dollars. If that large sum was required in 1814, what should be the amount now? It is easily answered by saying, that the issue contemplated by Mr. Stevens' bill is really far within the amount, which by the simple rule of three could be demonstrated as required, and necessary at the present time.

To conclude. We are for letting the banks alone, instead of making them issue Government notes instead of their own. It would take away all the inducements they now have to maintain a specie reserve, which is distributed in their numerous vaults ready to be used on the first return to specie payments. This is a great advantage, and should not be overlooked. It was by the establishment of a national bank and its ability to pay specie, that brought about a general restoration of the currency to that basis. The local banks will yet have that office to perform.

Let us therefore persevere in borrowing of the people, by asking them to receive the national currency and use it in their own behalf. Whatever inconvenience there arises from the enhancement of prices, not all chargeable to paper money, for some articles of necessity are cheaper than ever, is compensated in the advance of the wages of labor, and the demand for industrial products.

We reserve our opinions on the details of Mr. Chase's report, and Mr. Stevens' bill for another day. We desire to allay the senseless alarm of those persons, who believe, that because exchange to purchase foreign goods is high, that the country is going to ruin. Not so. It is emerging from temporary gloom and shadow, into a stable and undying splendor.

We quote sales of railroad and other securities as follows:

New York.—Sixth Avenue R. R. 125; Little Miami ex. div., 130; Norwich and Worcester, 71½ to 74; Rome and Watertown, 80 to 84; Canandaigua and Niagara Falls, 2; New York State 6s, 1871, 120; do., 1873 and 1874, 119; Illinois coupon bonds, 1862, 102¼; do., 1877, 105; do., 1879, 110; Illinois Central full stock, 78; Wabash and Erie Canal, 60; Illinois Canal reg. bonds, 100; Cumberland Coal pref., 14¾; Nic. Transit, 5½; Brooklyn City Water Loan, 118.

Boston.—Connecticut and Passumpsic Rivers, R. R. 6s, 101; Vermont Central 1st mort., 24¾; Rutland and Burlington 2d mort., 2; Chicago City 6s, 102½; Bath, Me., 6s, 106; Vermont 6s, 110; New Bedford and Taunton shares, 77; Cheshire, 18; Concord, 60; Copper Falls Mining Co., 7; Huron, 9½; North Cliff, 1½; Pontiac, 5¾; Acton, 5⅞; Bohemian, 6; Toltec, 3⅝; Hancock, 6¾; Petherick, 3; South Side, 1½; Columbian 2¼.

Baltimore.—Baltimore City 6s, 1860, 105; do., coupon, 105½; Central Ohio 2d mort., 75; do., income bonds, 17.

American silver is at a discount in Canada of 3 per cent.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Nov. 28, 1862, was as follows:

Passengers	$19,498 25
Freight and live stock	46,095 87
Mails and sundries	1,329 61
	$67,723 73
Corresponding week of last year	48,466 34
Increase	$19,257 39

The receipts of the Grand Trunk Railway of Canada for the week ending November 22, 1862, were:

Passengers	$20,633 10
Mails and sundries	5,012 50
Freight and live stock	67,649 37
Total	$93,294 97
Corresponding week of last year	91,945 72
Increase	$1,349 25

The Galena and Chicago Railroad earned the 4th week in November, 1862 $32,716 28
Do., 1861 40,000 30
Decrease $7,284 07

The earnings of the St. Louis, Alton and Terre Haute Railroad for the 3d week of Nov., 1862 were $29,638 64
Do., 1861 17,970 56
Increase $11,668 08

The earnings of the Chicago and Alton Railroad for the 4th week in November, 1862, were $24,581 47
Do., 1861 16,692 61
Increase $7,888 86

The Chicago and Northwestern Railroad earned in the 4th week of November, 1862 $27,917 85
Corresponding period, 1861 20,484 38
Increase $7,433 47

For the first three weeks in November the earnings were $79,816 91, against $60,675 15, in 1861—an increase of $19,141 76.

Illinois Central Railroad.

The November statement of the Illinois Central Railroad is as follows:

Land Department.

Acres Construction Lands sold	5,798.53	for	$52,651 32
Acres Interest Fund L'ds sold	720.00	"	6,260 73
Acres Free Lands sold	1,963.49	"	20,823 99
Total sales during the month	8,482.02	for	$79,736 04
To which add Town Lot sales			800 00
Total of all			$80,536 04
Acres land sold since Jan'y 1, 1862	73,879.46	for	$884,093 04
Acres sold prev'sly (net sales)	1,260,273.46	for	16,147,983 91
Total	1,334,152.92	for	16,982,076 95
Construction bonds canceled previous to October 30			$2,233,500 00
Cash collected in November			52,994 58
Net collections to Oct. 31, 1862			4,530,277 21

Traffic Department.

Receipts from passengers	$150,413 95
" freight	204,395 90
" mails	6,358 33
" rent of road	3,550 00
" other sources	5,000 00
Total receipts for November, 1862	$369,718 18
Do. do. 1861	243,248 68
Increase	$126,469 50

Railroad Earnings--Monthly.

The earnings of the Rome, Watertown and Ogdensburg R. R. in Nov., 1862, were $56,169 42
Do., 1861 47,873 99
Increase $8,295 43

The following are the earnings of the Terre Haute and Alton Railroad for October and November as compared with last year:

	1861.	1862.
October	$74,139 62	$118,887 26
November	80,392 46	126,222 36
Total	$154,532 08	$245,109 62

The Suez Canal.

"It is no longer possible," says the *Moniteur*, "to dispute the practicability of this canal now that the part between Port-Said and Timseh has been executed. That part is the only one that has never before been constructed; it is the only one, therefore, about which there could have been a doubt, and regarding which difficulties and unfavorable anticipations might have been suggested. As we have often remarked before, the canal from Timseh to Suez has been digged and in actual use in former times, at four different periods. We may therefore, without any hesitation, assert that the problem has been substantially and satisfactorily solved, as maritime communication is now open as far as Timseh. Beyond that point there is nothing to be done which the ancients have not already achieved, with resources greatly inferior to those of modern science. Thus the operations of 1861-62 will end with the important fact of a commencement being made at El-Guisr; and those of 1862-63, which as we hope, will unite the two seas, have begun even before the 1st of November, the period marked out for them. Our letters inform us that in the latter part of October twelve thousand workmen were to have been engaged on different parts of the canal in the direction of Suez, from where it branches off at Nefeche to the Serapeum. We trust that with so large a number of workmen we shall soon be in a position to inform our readers of the completion of what—simultaneously with the maritime portion—will be carried on as far as the quarries of Gebel-Geneffe, which are so necessary for the construction of Port Said, and afterwards to Suez."

Incrustation of Steam Boilers.

We take the following from the *Philadelphia Inquirer*, where the material has been tried. We give it place in our columns, as we think it deeply interests all using steam:

A Valuable Invention.—Since the days of Watt and Fulton, nothing has proved of more annoyance and expense to the owners of steam boilers than the deposit of lime and other salts, known as incrustation; and one of the greatest and most important questions of the day has been to find a safe and reliable means of preventing it. To one of our neighboring citizens, Mr. H. N. Winans, of New York, belongs the credit of having discovered, after years of careful research and experiment, a chemical combination which accomplishes the object, without detriment to the boiler, and at trifling cost. Not only do our own experiments warrant us in bringing it to the notice of those using steam, but its use, for a long time, by such parties as W. B. Thomas & Co., Reading Railroad, North Pennsylvania Railroad, Bement & Dougherty, Morris, Tasker & Co., and others in our city, (and throughout the country for six years past), stamps it as a reliable and needed remedy, and we bespeak for Mr. Winans the success due to his energy and perseverance in discovering such a useful article.

The loss of fuel in heating, through this non-conducting stone lining (10 to 50 per cent.), the loss of time in cleaning, the injury to the iron by the extra heat necessary to penetrate the scale, are all too well-known to need comment here; we merely mention the fact of a remedy to prevent incrustation in boilers, and those interested will do well to address the inventor on the subject.

The Storage of American Petroleum.

From the following, taken from a late Liverpool Journal, it may be seen that the question of the character of petroleum is undergoing the same discussion abroad that it is here, and very much in the same way.

The very large quantities of petroleum poured into the British and other European markets from the oil-wells of the United States and of Canada continue to excite much attention, and the question whether that material can be profitably used as a substitute for coal in the manufacture of gas is again brought under consideration. In the circular of a Liverpool oil-broker now before us, it is estimated that the exports of rock-oils from America during the first eight months of the present year amounted to 6,000,000 gallons, and among the uses to which it has been successfully applied in this country is mentioned the making of gas for lighting some nobleman's mansion. No particulars are given respecting the mode of manufacture nor the cost; but, from the result of this experimental trial, it is sanguinely anticipated that the demand for petroleum will be increased ten or twentyfold as a material for gas-making. To facilitate the transit of the oil from the wells of Pennsylvania, the Atlantic and Great Western Railway Company have constructed a branch line, at a cost of £150,000, to the district of the oil-wells, which line was expected to be opened at the beginning of this month, and, in the words of the Liverpool oil-broker, "the returns for the future will show extraordinary vitality." The prices quoted in the Liverpool market for the crude oil of the States are worth £16 to £16 10s. per ton, and for Canadian oil, £11 10s. to £12, which prices are equivalent to about 1s. 3d. per gallon for the former, and 11d. per gallon for the latter. We noticed the probable feasibility of employing petroleum for manufacturing gas in the "Circular" of the 6th of May last, on which occasion we remarked—"The question has been raised whether it is not more convenient and cheaper to use the rock oil from Canada, than the coal from Newcastle or Scotland, in the manufacture of gas. It appears

that a larger quantity of gas can be produced by the destructive distillation of 50 gallons of the petroleum oil, weighing 8 lb. 6 oz. per gallon than is yielded by one ton of Newcastle coal, and the illuminating power of the gas is stated to be three times greater than that of ordinary coal-gas in Canada. Assuming the statements in the journal we have quoted (*Journal of the Board of Arts and Manufactures for Upper Canada*) to be correct, nearly 50,000 cubic feet of gas, equal in illuminating power to 150,000 feet of ordinary coal-gas, might be produced from one ton of petroleum oil. It seems, therefore, that 50 gallons of the oil, weighing about 428 lb., which, it is said, might be sold in England at 1s. per gallon, would produce as much gas of at least an equal illuminating power as one ton of boghead that costs in London 60s."

In the foregoing observations the price at which the best quality of rock-oil can be purchased in this country is underrated; for it appears that it realises in Liverpool 1s. 3d. in first hands, and would probably be charged 1s. 6d. to consumers. Before it can enter into competition with Newcastle coal, at 16s. per ton, rock-oil must be sold at 6d. per gallon. It is not probable that even the oil from Canada can be supplied in England at so low a price; especially as the obstruction thrown on the trade by the Act for the Safe-keeping of Petroleum must increase the charges for warehousing. In some remote localities in this country, and in many parts of the continent, it may be cheaper to use rock oil, at its present price, for making gas than coal; but in nearly all the towns of this kingdom it will be found the more costly material. It is, however, in the country that yields the oil that it could be most advantageously employed for the production of gas as a substitute for the coal now obtained from Newcastle. It would be a curious anomaly in commercial transactions were England and America to interchange, for the manufacture of the same article, the native products of their respective lands, which each one could so much more profitably employ at home. Should the rock-oil be extensively used, either on the continent or in America, for making gas, such a new demand for the article would necessarily enhance the price, even should the oil-wells continue to flow as freely as they have hitherto done.

The Metropolitan Board of Works have been occupied in further considering the applications for licenses for the storing of petroleum; and the decision they have come to on the case of Messrs. Timothy & Co., of Mellish's Wharf, Millwall, will probably have the effect of preventing large quantities of petroleum from being stored on any premises in the metropolis within the prescribed distance of 50 yards allowed by the act of Parliament. The streets committee, to whom the matter had been referred, after having personally viewed the premises, and heard the explanations of the means adopted for security from the applicants, and the remonstrances of the neighbors against the danger to which they are exposed from the contiguity of such a quantity of inflammable material, from which danger they have no protection, as the fire-offices refuse to insure their premises, the committee were of opinion that the arrangements made to guard against the spread of fire were not sufficient to justify the board in granting the license. In this opinion the board, with one exception, were unanimous, and the license was accordingly refused. The ground on which the refusal was founded was not specifically stated, but it appears, from the observations made during the discussion of the subject, that nothing less than the separation of the place in which the petroleum is stored from the neighboring buildings, by a space of 50 yards, was considered adequate protection. We fully agree with the board, that regard for public safety rendered it necessary that they should refuse the license for the storage of the large quantity of such highly inflammable material as was deposited at Mellish's Wharf; for, were the suggestion of their superintending architect to be adopted, and all the petroleum were stored in a tank from which it could not escape, even in that case the raging flames from so large a quantity of the volatile and highly inflammable fluid might seriously endanger premises within a distance of 50 yards. It is very questionable, indeed, whether the diminution of the distance from 100 yards, originally named in the bill, was made with due consideration for public safety, when such enormous quantities as 3000 barrels of petroleum are piled upon one another in one wharf.

The next application considered was from the Asphaltum Company, to store and "work" petroleum on their premises in West Ferry-road, Millwall, in which case also the license was refused; not, however, on the ground that the crude petroleum was not safely stored, but on account of the increased danger in consequence of the article undergoing distillation within a short distance from the store.

A license applied for by Sir Charles Price & Co., for working Rangoon earth oil on their premises at Millwall, was granted after some discussion, on the condition that the Rangoon earth oil be the only petroleum stored and worked on the premises, and that the south boundary wall be raised. It is difficult to understand, from the report of the proceedings, why Sir Charles Price & Co. should have applied for the authority of the board to store and work Rangoon earth oil, which there was the evidence of several chemists to show does not come within the designation of petroleum as defined by the act, for it does not emit inflammable vapor at a temperature considerably above 100° Fahrenheit; and that substance is considered so little dangerous by the fire offices, that they insure not only the neighboring premises, but those on which the oil is stored and manufactured, at the lowest rates. Though Sir Charles Price & Co. have been so careful not to infringe the Act for the Safe-keeping of Petroleum as to apply for a license to store an article that does not appear to come within its provisions, the idea is entertained in other quarters that by changing the name of petroleum or its products to "Rangoon oil," "earth oil," "mineral turpentine," and the like, the operations of the act may be evaded. The products included within its provisions are sufficiently defined by the act to prevent such an evasion. The words are, "Petroleum, for the purposes of this act, shall include any product thereof that gives off an inflammable vapor at a temperature of less than 100° Fahrenheit." Petroleum comprises all mineral oils which exude from the earth, whatever may be their names; and the only products of that kind which are exempted from the operation of the act are those which do not give off inflammable vapor at the temperature specified. Oil produced by distillation is exempted—such as Young's paraffin oil, distilled from boghead coal—even if it give off an inflammable vapor at 100°, which that does not.

In addition to the danger of crude petroleum, the low-priced article imported from Canada emits an offensive vapor, of which fact the members of the Liverpool town council had recently personal experience, when discussing the question whether it was a nuisance or not, by the breaking of a large jar containing the oil in front of the town hall. It is this offensive odor of the Canadian rock oil that has given rise to the complaints of the neighbors of Messrs. Humfreys, Yool & Co., of Suffolk Grove, Southwark; and it was principally in consequence of those complaints that the license applied for by that firm was refused until the nuisance is removed.

The Court of Aldermen have also been engaged in considering the conditions they shall require to be complied with before granting licenses to store petroleum in the city of London. The recorder and common sergeant have recommended the court not to grant licenses for a longer term than six months, and only on condition that no candle or other artificial light be admitted into any part of the premises in which petroleum is kept. We conceive that not even on those nor on any other conditions short of a separation of 50 yards from other premises will the Court of Aldermen grant a license for the storage of any large quantity of such an inflammable article within the city.—*The Journal of Gas Lighting.*

Report of the Secretary of the Treasury.

(Continued from p. 969.)

possible equal to the purchasing power which gold would have had if specie payments had been maintained; but the issue and use of the notes is unavoidable, and the government can resort to borrowing only when the issue has become sufficiently large to warrant a just expectation that loans of the notes can be had from those who hold or can obtain them at rates not less advantageous than those of coin loans before suspension. The difficulty which the takers of the recent loan of $13,613,450 found in obtaining United States notes with which to meet their engagements to the Treasury is very instructive on this head. It points, indeed, directly to the conclusion that loans of the United States notes, in sufficient amounts to meet the disbursements of the government, could not now be obtained at rates which a due regard to the interests of the tax payers would permit the Secretary to accept. Whatever may be said of the aggregate circulation, it cannot, then, be successfully maintained that the circulation of United States notes is excessive. When extended to the limits authorized by existing laws, it will be no larger than the wants of the people and the government imperatively demand.

If there be a considerable redundancy then; if there be a considerable real depreciation of the circulation—which is by no means admitted—what has caused the redundancy and the depreciation?

The cause of all that exists is easily found in the statements of the banking corporations. The circulation of corporate notes increased during the year ending on the 1st of November, 1862, from $130,000,000 to $167,000,000. During the same time the volume of deposits, which answer very many of the purposes of circulation, had swelled from $264,000,000 to $344,000,000. The greater portion of this increase took place within the last seven months.

The augmentation of deposits always accompanies increase of circulation. Together they stimulate loans, and are, in turn, stimulated by the desire of the interest derived from loans. As might have been anticipated, loans increased, though not equally, with the circulation and deposits. From $607,000,000 on the 1st day of November, 1861, they had grown to $677,000,000 on the 1st day of November, 1862.

Here is an obvious and sufficient explanation of whatever undue expansion may have taken place. The Secretary has already expressed the opinion that circulation is not greatly redundant, and that no considerable depreciation of currency has actually occurred. He thinks it sufficiently proved however, that whatever there may be of either is fairly attributable not to the increase of United States notes, but to the increase of circulation and deposits.

Under these circumstances, *the path of wisdom and duty seems very clear. It leads to the support of a United States note circulation, and to the reduction of the bank note circulation.* A comparatively small reduction of the latter will allow ample room for the whole increase of the former authorized by existing laws; and as the reduction proceeds the increase may be extended, never, however, passing the point which admits the negotiation of loans at reasonable rates. The Secretary has heretofore advised *the imposing of a moderate tax on corporate circulation, and now renews the recommendation as the best means of reduction and gradual substitution.* Such a tax involves no hardships. Notes circulating as money cost nothing beyond the expense of production and supervision, and yet form a highly accumulative species of property. The necessities of the war have caused the taxation of almost all forms of value. Can there be a sound reason for exempting that which costs the proprietor least and brings him most?

It may be properly added that this desirable substitute of a circulation, uniform in description and value, for a circulation varying widely in both, may, perhaps be more easily and beneficially effected now than at any other time. The circula-

tion of United States notes may greatly facilitate the payments to the banks through which their own notes must be withdrawn; and thus, not only protect the community from the inconveniences, but the banks from the losses which might otherwise attend reduction.

A circulation composed exclusively of notes issued directly by the government, or of such notes and coin, is recommended mainly by two considerations—the first, derived from the facility with which it may be provided in emergencies, and the second, from its cheapness.

The principal objections to such a circulation as a permanent system, are, 1st, the facility of excessive expansion when expenditure exceeds revenue; 2d, the danger of lavish and corrupt expenditure, stimulated by facility of expansion; 3d, the danger of fraud in management and supervision; 4th, the impossibility of providing it in sufficient amounts for the wants of the people whenever expenditures are reduced to equality with revenue or below it.

Those objections are all serious. The last requires some elucidation. It will be easily understood, however, if it be considered that a government issuing a credit circulation cannot supply, in any given period, an amount of currency greater than the excess of its disbursements over its receipts. To that amount, it may create a debt in small notes, and these notes may be used as currency. This is precisely the way in which the existing currency of United States notes is supplied. That portion of expenditure not met by revenue or loans has been met by the issue of these notes. Debt in this form has been substituted for various debts in other forms. Whenever, therefore, the country shall be restored to a healthy normal condition, and receipts exceed expenditures, the supply of United States notes will be arrested, and must progressively diminish. Whatever demand may be made for their redemption in coin must hasten this diminution; and there can be no reissue; for reissue, under the conditions, necessarily implies disbursement, and the revenue, upon the supposition, supplies more than is needed for that purpose. There is, then, no mode in which a currency in United States notes can be permanently maintained, except by loans of them, when not required for disbursements, on deposits of coin, or pledge of securities, or in some or other way. This would convert the Treasury into a government bank, with all its hazards and mischiefs.

If these reasonings be sound, little room can remain for doubt that the evils certain to arise from such a scheme of currency, if adopted as a permanent system, greatly overbalanced the temporary though not inconsiderable advantages offered by it.

It remains to be considered what results may be reasonably expected from an act authorizing the organization of banking associations, such as the Secretary proposed in his last report.

The central idea of the proposed measure is the establishment of one sound, uniform circulation of equal value throughout the country, upon the foundation of national credit combined with private capital.

Such a currency, it is believed, can be secured through banking associations organized under national legislation.

It is proposed that these associations be entirely voluntary. Any persons desirous of employing real capital in sufficient amounts, can, if the plan be adopted, unite together under proper articles, and, having contributed the requisite capital, can invest such part of it, not less than a fixed minimum, in United States bonds, and, having deposited these bonds with the proper officer of the United States, can receive United States notes in such denominations as may be desired, and employ them as money in discounts and exchanges. The stockholders of any existing banks can, in like manner, organize under the act, and transfer, by such degrees as may be found convenient, the capital of the old to the use of the new associations. The notes thus put into circulation will be payable, until resumption, in United States notes, and, after resumption, in specie, by the association which issues them on demand; and if not so paid will be redeemable at the Treasury of the United States from the proceeds of the bonds pledged in security. In the practical working of the plan, if sanctioned by Congress, redemption at one or more of the great commercial centres will probably be provided for by all the associations which circulate the notes, and, in case any association shall fail in such redemption, the treasurer of the United States will probably, under discretionary authority, pay the notes, and cancel the public debt held as security.

The organization proposed, if sanctioned by Congress would require within a very few years for deposit as security for circulation bonds of the United States to an amount not less than $250,000,000. It may well be expected, indeed, since the circulation, by uniformity in credit and value, and capacity of quiet and cheap transportation, better than any hitherto issued, that the demand for bonds will largely overpass this limit. Should Congress see fit to restrict the privilege to deposit to the bonds known as five-twenties, authorized by the act of last session, the demand would promptly absorb all of that description already issued, and make large room for more. A steady market for the bonds would thus be established and the negotiation of them greatly facilitated.

The Secretary does not propose to interfere with the independent Treasury. It may be advantageously retained, with the assistant treasurers already established in the most important cities, where the customs may be collected as now, in coin or Treasury notes issued directly by the government, but not furnished to banking associations.

But whatever the advantages of such arrangements in the commercial cities in relation to customs, it seems clear that the secured national circulation furnished to the banking associations should be received everywhere for all other dues than customs, and that these associations will constitute the best and safest depositaries of the revenue derived from such receipts.

Another and very important advantage of the proposed plan has already been adverted to. It will reconcile, as far as practicable, the interests of existing institutions with those of the whole people.

All changes however imprortant should be introduced with caution, and proceeded in with careful regard to every affected interest.

The proposed plan is recommended, finally, by the firm anchorage it will supply to the Union of the states. Every banking association whose bonds are deposited in the Treasury of the Union; every individual who holds a dollar of the circulation secured by such deposit; every merchant, every manufacturer, every farmer, every mechanic, interested in transactions dependent for success on the credit of that circulation, will feel as an injury every attempt to rend the national unity, with the permanence and stability of which all their interests are so closely and vitally connected. Had the system been possible and had it actually existed two years ago, can it be doubted that the national interests and sentiments enlisted by it for the Union would have so strengthened the motives of adhesion derived from other sources that the wild treason of secession would have been impossible?

The Secretary does not yield to the phantasy that taxation is a blessing and debt a benefit; but it is the duty of public men to extract good from evil whenever it is possible. The burdens of taxation may be lightened and even made productive of incidental benefits by wise, and aggravated and made intolerable by unwise legislation. In like manner debt, by no means desirable in itself, may, when circumstances compel nations to incur its obligations, be made by discreet use less burdensome, and even instrumental in the promotion of public and private security and welfare.

The rebellion has brought a great debt upon us. It is proposed to use a part of it in such a way that the sense of its burden may be lost in the experience of incidental advantages. The issue of United States notes is such a use; but if exclusive, is hazardous and temporary. The security by national bonds of similar notes furnished to banking associations is such a use, and is comparatively safe and permanent; and with this use may be connected, for the present, and occasionally, as circumstances may require hereafter, the use of the ordinary United States notes in limited amounts.

No very early day will probably witness the reduction of the public debt to the amount required as a basis for secured circulation. Should no future wars arrest reduction and again demand expenditures beyond revenue, that day will, however, at length come. When it shall arrive, the debt may be retained on low interest at that amount, or some other security for circulation may be devised, or, possibly, the vast supplies of our rich mines may render all circulation unadvisable except gold and the absolute representative and equivalents, dollar for dollar, of gold in the Treasury or on safe deposit elsewhere. But these considerations may be for another generation.

The recommendations now submitted, of the limited issue of United States notes as a wise expedient for the present time, and as an occasional expedient in future times, and of the organization of banking associations to supply circulation secured by national bonds and convertible always into United States notes, and after resumption of specie payments, into coin, are prompted by no favor to excessive issues of any description of credit money.

On the contrary, it is the Secretary's firm belief that by no other path can the resumption of specie payments be so surely reached and so certainly maintained.

United States notes receivable for bonds bearing a secure specie interest are next best to notes convertible into coin. The circulation of banking associations organized under a general act of Congress, secured by such bonds, can be most surely and safely maintained at the point of certain convertibility into coin. If, temporarily, these associations redeem their issues with United States notes, resumption of specie payments will not thereby be delayed or endangered, but hastened and secured; for, just as soon as victory shall restore peace, the ample revenue already secured by wise legislation will enable the government, through advantageous purchases of specie, to replace at once large amounts, and, at no distant day, the whole of this circulation by coin, without detriment to any interest, but, on the contrary, with great and manifest benefit to all interests.

The Secretary recommends, therefore, no mere paper money scheme, but, on the contrary, *a series of measures looking to a safe and gradual return to gold and silver as the only permanent basis standard, and measure of values recognized by the constitution—between which and an irremediable paper currency, as he believes, the choice is now to be made.*

No country possesses the true elements of a higher credit—no country in ordinary times can maintain a higher standard of currency and payment than the United States.

The government is less costly than that of most other great powers. The expenditures of the current fiscal year, excluding those of the War and Navy Departments, can hardly equal those of the last year, which amounted to $24,511,476 66. Estimating those of these departments at double the expenditures of the last year before the rebellion, they would for the current year, had the war ended before last midsummer as was anticipated at the date of the last report, amount to the sum of $55,845,834 48. The interest on the public debt is for the current year estimated at $25,041,532 07, and will not probably go over that sum. The whole expenditures of the government for the current year, on the supposition of peace, would, therefore, not exceed $105,371,843 21. This aggregate must be increased hereafter by the addition of interest on the loans of the current and future years and by pensions, the precise amount of which cannot be foreseen. Estimate

the former at fifty, and the latter at ten millions a year, and the total annual expenditures in peace will reach, omitting fractions to $165,000,000. The expenditures of Great Britain during the year ending March 31, 1862, were $364,486,682; those of France for 1862, according to French official estimates, will reach $421,823,900, and the annual expenses of Russia, according to the best accessible information, do not fall far short of $280,000,000.

To meet our annual expenditures, and to assure beyond contingency the punctual discharge of the interest of the public debt, and the creation of a sinking fund for its reduction, Congress has provided a revenue from customs even now reaching nearly seventy millions a year, and a revenue from internal duties which will not probably fall short of one hundred and fifty millions a year.

Without reckoning any other resources than those already provided, the revenue, therefore, will annually exceed the expenditures by fifty-five millions, which sum may be used for the reduction of the public debt. If, then, the war shall be continued, contrary to hope and expectation, to midsummer of 1864, and the public debt shall reach the utmost limit now anticipated of seventeen hundred and fifty millions of dollars, the excess of revenue will reduce that debt, during the first year of peace, more than three per cent.

But the American republic possesses immense, resources which have not yet been called into contribution. The gold-bearing region of the United States stretches through near eighteen degrees of latitude, from British Columbia on the North to Mexico on the south, and through more than twenty degrees of longitude, from the eastern declivities of the Rocky Mountains to the Pacific Ocean.. It includes two States, California and Oregon; four entire territories, Utah, Nevada, New Mexico and Washington, and parts of three other territories, Colorado, Nebraska and Dacota. It forms an area of more than a million of square miles, the whole of which, with comparatively insignificant exceptions, is the property of the nation. It is rich, not only in gold, but in silver, copper, iron, lead and many other valuable minerals. Its product of gold and silver during the current year will not much, if at all, probably fall very short of $100,000,000; and it must long continue gradually, yet rapidly, to increase. If this product be subjected to a reasonable seignorage, as suggested by some, or if, as suggested by others, the mineral lands be subdivided and sold in convenient parcels, with proper reservations in favor of the miners now in occupation of particular localities, a very considerable revenue may, doubtless, be obtained from this region without hardship to the actual settlers and occupiers.

And there are other mines than those of gold or silver, or copper or iron, in the wide territory which includes the public lands of the United States. Every acre of the fertile soil is a mine which only waits for the contact of labor to yield its treasures; and every acre is opened to that fruitful contact by the Homestead Act. When the opportunities thus offered to industry shall be understood by the working millions of Europe, it cannot be doubted that great numbers will seek American homes, in order to avail themselves of the great advantages tendered to their acceptance by American law. Every working man who comes betters the condition of the nation as well as his own.

With such resources at the disposal of the republic, no one need be alarmed lest the United States may become unable to pay the interest on its debt, or to reduce the principal to whatever point the public interest may indicate. The republic is passing through the pangs of a new birth to a nobler and higher life. Twice already she has paid off a national debt contracted for the defence of her rights; the obligations of that which she now incurs for the preservation of her existence will be not sacredly fulfilled.

It has been already stated that the amount to be provided, beyond resources available under existing laws, is, for the current year $276,912,517 66, and for the ensuing year, $627,888,188 56.

To provide those amounts loans in some form must be negotiated.

The Secretary has already expressed the opinion with great deference to the superior wisdom of Congress, that it will be unwise, unless conditions greatly change, to authorize the increase of United States notes beyond the limit now fixed by law. Should any vacuum be created by the withdrawal of bank note circulation, that vacuum should, doubtless, be filled by United States notes. Should Congress adopt the measures proposed by the Secretary, it is not improbable that an additional issue of fifty millions may be required for that purpose within the year, and an equal additional issue during the following year. And it may well be hoped that military successes, re-establishing the authority of the United States in large districts of the insurgent region, will call for further issues to supply the place of the worthless currency which the rebellion has forced upon the people. Should it be deemed expedient to invest the Secretary with any discretionary power, in view of these contingencies, it should be so limited as to allow no increase of aggregate circulation beyond the clear demands of real business.

A considerable additional sum may probably be obtained by removing the limit on temporary deposits. The amount of these deposits has steadily increased, notwithstanding large repayments to depositors. The treasury of the government has been made the savings bank of the people. Should the restriction be removed, there is reason to believe that twenty-five millions may be received beyond the maximum now fixed, during the year.

But the chief reliance, and the safest, must be upon loans. Without any issues of United States notes beyond the amount now authorized, it seems certain that loans for the whole amount required for the current year can be readily obtained at fair rates, and it may be confidently hoped that before its close the resources of the country will be so well understood, and the restoration of its territorial integrity so well assured, that capitalists will not hesitate to supply whatever may be needed for the subsequent year.

But in order to the advantageous negotiation of loans, the action of Congress is necessary.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000, and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

FISK & HATCH,
BANKERS,
AND DEALERS IN
ALL ISSUES OF GOVERNMENT
AND OTHER
FIRST CLASS SECURITIES,
38 Wall st., N. Y.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK,

HAVE on hand for immediate delivery, the **NEW TWENTY-YEAR SIX PER CENT. BONDS** of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

Burden, Hubbard & Co.,
MACHINISTS,

MANUFACTURERS of Horizontal, Portable and Hoisting Steam Engines, Sugar Mill-, Saw and Grist Mills, Boilers, Hydraulic Presses, Pumps and Gearing for working mines, etc., etc. No. 102 Front st., BROOKLYN, N. Y.

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

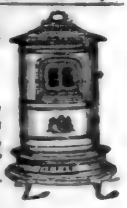
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

HUDSON RIVER RAILROAD OFFICE, N. Y.

This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.



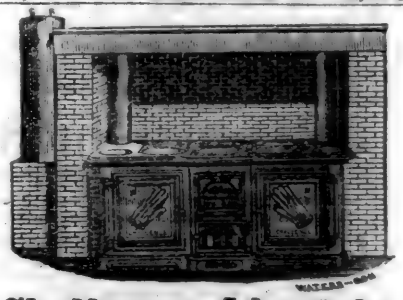
J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.

The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.

MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,



Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.

Fire may be kept all winter with an astonishingly small supply of coal.

Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.

This range, already very popular, has the **LARGEST OVE**[illegible] of any in the market; BAKES PERFECTLY, never f[illegible]g to brown at the bottom; BOILS, ROASTS and and BR[illegible]S with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.

Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest price stove in the market.

Three sizes, adapted to coal, or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

American Railroad Journal.

New York, Saturday, December 20, 1862.

Illinois Central Railroad.

We are again obliged to Mr. S. J. Hayes, Superintendent of Machinery on the Illinois Central Railway, for an interesting report of its locomotive department for the month ending Oct. 31st ult. It is a table on a broad sheet showing among other things the divisions of the routes, the engines and their numbers, their drivers, the number of miles run by each engine, the consumption of fuel, wages, repairs, &c., with the average per mile of the various expenditures incurred in working the lines. From these facts, there might be large opportunity for calculating how, when and where, the expenses of management are susceptible of control, what is chargeable to badly constructed, or uneconomical machines, what to fuel, what to freight, and what to passenger trains. Just as soon as expenses can be reduced to a safe minimum, Railway stockholders will be able to know what their dividends should continue to be. This is the great secret. In this instance, if there is anything wrong in the management of the Illinois, the public are not kept in the dark. The statement before us is a fine illustration of scientific and practical supervision. This is essentially necessary, for the number of miles traversed by the locomotives on this road for the month was 264,527!!

New York Central Railroad.

The annual statement of the operations of this company for the fiscal year ending September 30, 1862, was submitted at the meeting of the stockholders held on the 10th inst. The following is an abstract:

EARNINGS AND RECEIPTS.

From through passengers		$633,074 74
" way "		1,699,084 38
" through freight		4,873,642 40
" way "		1,728,488 56
" mail transportation		95,777 50
" express		62,765 00
" rents, storage, etc.		263,995 19
Total		$9,356,827 77

PAYMENTS OTHER THAN FOR CONSTRUCTION.

For transportation expenses, viz:		
For passenger business	$1,485,616 63	
For freight "	4,122,133 70	
		$5,607,750 33
For interest, including interest on debt certificates held for the sinking fund	$1,021,193 12	
For sinking funds	113,967 75	
For rent of Niagara Bridge and Canandaigua Railroad	60,000 00	
		1,195,160 87
For dividends, viz:		
No. 17, Feb., 1862, 3 per cent.	$720,000 00	
No. 18, Aug., 1862, 3 per cent.	720,000 00	
		1,440,000 00

The transportation expenses for the year ending September 30, 1862, were 59.93 per cent. of the gross earnings for the same period.

The net earnings for the year ending September 30, 1862, were $2,553,916 57, equal to 10.64 per cent. on the amount of the capital stock of the company.

SUMMARY *of all transportation expenses for the year ending September* 30, 1862, *as shown by the following tables:*

	Amount.	Allotted to Passenger Transp.	Allotted to Freight Transp.
Maintaining roadway and real estate	$1,709,712	$448,489	$1,221,223
Repairs of machinery	1,595,165	334,654	1,261,511
Operating the road	2,302,873	663,473	1,639,400
Total	$5,607,750	$1,485,616	$4,122,134

COST OF OPERATING THE ROAD.

	Amount.	Allotted to Pass. Transp.	Allotted to Fr't Transp.
Office expen., stationery, etc.	$24,291 11	$11,856 80	$12,434 31
Agents and clerks	275,007 92	100,325 69	174,682 22
Labor, loading and unloading freight	306,026 29	.....	306,026 29
Porters, watchmen, etc.	185,061 86	52,874 82	132,187 04
Wood and water station attendance	50,430 05	14,408 58	36,021 47
Conductors, baggagemen and brakemen	166,570 09	73,501 12	93,068 97
Engineers and firemen	219,000 17	70,098 41	148,901 76
Fuel, and preparing for use	722,734 72	206,496 62	516,239 10
Oil and waste	114,387 56	32,682 16	81,705 40
Loss and damage of goods	28,940 01	2,739 18	26,200 83
Damages for injuries of persons	21,379 50	16,034 68	5,344 82
Damages to property, including damages by fire and cattle killed on road	8,632 21	2,466 34	6,165 87
General superintendence	55,307 06	15,819 16	39,547 90
Contingencies	125,046 08	64,170 98	60,874 10
Totals	$2,302,873 63	$663,473 52	$1,639,400 11

MAINTENANCE OF ROAD AND MACHINERY.

	Amount.	Allotted to Pass. Transp.	Allotted to Fr't Transp.
Repairs of road-bed and railway, excepting cost of iron	$708,676 19	$219,621 67	$549,054 52
Cost of iron (including the cost of chairs & spikes) used in repairs	549,746 70	157,070 48	392,676 22
Repairs of buildings	214,217 75	61,205 07	153,012 68
Repairs of fences & gates	18,310 99	5,231 71	13,079 28
Taxes on real estate	156,169 81	44,619 94	111,549 87
Rep'rs Mohawk turnpike	2,590 21	740 06	1,850 15
Totals	$1,709,711 65	$488,488 98	$1,221,222 72
Cost of Repairs of Machinery:			
Rep. of engines & tend'rs.	$489,116 99	$139,747 70	$349,369 29
Do. pass. and bagg. cars	173,566 23	173,566 23	.....
Do. freight cars	861,291 00	.....	861,291 00
Do. machy, etc., in shops	41,294 90	11,708 55	29,496 85
Incidental expenses	29,895 93	8,511 70	21,384 23
Totals	$1,595,165 05	$333,654 18	$1,261,510 87

Comparative statement of the funded debt & capital stock on the 30th September, 1861 and 1862:

	1861.	1862.
Debt certificates, less am't of sinking fund	$7,552,000	$7,350 000
Bonds for convertible loan,	3,000,000	3,000,000
Debts of the former companies outstanding	263,554	257,118
Bonds for fund'g the debts of the former companies	1,553 000	1,498.000

The following is a detailed statement of the funded debt:

Debt Certificates, or Premium Bonds, issued to stockholders in 1853, under the Consolidation Agreement, payable May 1st, 1883, with interest at 6 per cent per annum, payable semi annually, on 1st May and November,		$8,892,600 00
Deduct the amount of these certificates purchased for the Sinking Fund provided for their payment under the Consolidation Agreement, and cancelled		1,542,600 00
		$7,350,000 00
Amount outstanding of the debts of the former Companies, assumed under the Consolidation Agreement		257,118 22
Bonds of the Buffalo and Niagara Falls Railroad Company, assumed under the lease of that road, payable October 1st, 1864, interest at 7 per cent per annum, payable semi annually, on 1st January and July		24,000 00
Bonds for funding the principal of the debts assumed for the former Companies, at consolidation, payable August 1st, 1876, interest at 7 per cent per annum, payable semi-annually, on 1st February and August.	$1,680,000	
Less amount cancelled and held by Sinking Fund	182,000	
		1,498,000 00
Bonds to the Stockholders of the Buffalo and Niagara Falls Railroad Company, under the lease before referred to, payable May 1st, 1883, interest at 6 per cent per annum, payable semi annually, on 1st May and November.	$110,800	
Less amount cancelled and held by Sinking Fund..	31,300	
		$79,500 00
Bonds for railroad stock payable May 1st, 1883, interest at 6 per cent per annum, payable semi-annually, on 1st May and November	$817,000	
Less amount cancelled and held by Sinking Fund...	154,000	
		663,000 00
Bonds for Real Estate purchased, payable May 1st, 1883, interest at 6 per cent per annum, payable semi-annually, on 1st May and November.	$235,000	
Less amount cancelled and held by Sinking Fund...	70,000	
		165,000 00
Bonds and mortgages, for Real Estate purchased, with interest at 7 per cent per annum, excepting $25,502 50, the interest upon which is at 6 per cent per annum.		252,974 15
Bonds of June, 1854, payable June, 1864, interest at 7 per cent per annum, payable semi-annually, on 15th June and December.		3,000,000 00
Bonds of August, 1859, payable August, 1876, interest at 7 per cent per annum, payable semi-annually, on 1st February and Aug. with convertible privilege, at par, for ten years.		990,000 00
Total amount of Funded Debt, September 30th, 1862,		$14,279,593 37

The Company has no Floating Debt.

During the year the Company has occasionally given acceptances, as heretofore; the amount of which, outstanding at the close of the fiscal year, was $38 890 23.

The average rate per annum of interest on Funded Debt, 6 35-100 per cent.

All the interest due by the Company, except on mortgages, is payable in the city of New York.

REMARKS AS TO THE BUSINESS OF THE YEAR.

During the year there has been purchased for the Sinking Funds, and cancelled :

In Debt Certificates	$202,000 00
" 7 per cent Bonds due in 1876	55,000 00
" Bonds for Railroad Stock	17,000 00
" " " Real Estate	1,000 00
" " to Buffalo and Niagara Falls Railroad Company	3,000 00
Increase in Sinking Fund in hands of State Comptroller, for redemption of the State Stock issued to the Tonawanda Railroad Company, which forms a part of the Debts of the former Companies still outstanding.	6,435 63
	$284,435 63

The amount of income used for the Construction and Investment Accounts, as shown by the Report of last year, independently of the item of Fuel and Supplies referred to below, was $1,466 852 15.

The amount so used, was, at the close of the fiscal year just ended, as shown by the following statement $1,719,884 89.

Construction Account		$31,787,397 80
Investment "		782,580 46
		$32,569,978 26
Capital Stock	$21,000,000 00	
Funded Debt, less Debt Certificates and Bonds to Buffalo and Niagara Falls Railroad Co., for premiums allowed at Consolidation	6,850,093 37	
		30,850,093 37
		$1,716,884 89

To the amount shown at the close of each fiscal year, as above, should be added, for the purpose of showing the full result, the value of Fuel and Supplies not included in the assets of the Company, as will appear from the Inventory and Balance Sheet contained in the Report, $1,000,000.

It will be seen from the Report, that the business of the year has been considerably larger than in any previous year; owing, mainly, to well known causes which have also favorably affected the business of most of the main lines of road in the northern States, but which, to a considerable extent, must be looked upon as temporary in their nature.

During the past year, the cost of the following items has been charged to Construction Account.

Land for additional Freight accomodations, principally at Albany and Buffalo	$59,140 31
Amounts paid on account of erections and improvements at West Albany, as referred to in the Annual Report for 1861, including payments made within the present year for work partly completed when that Report was made	204,031 31
	$263,171 65

All the other expenditures made during the year, except such as appear in the increased value of Fuel and Supplies on hand, have been charged to Transportation Expenses, and include besides the ordinary items of general repairs, the following :

The addition to the Equipment of 14 Locomotive Engines and 483 Freight Cars.

The addition of new sidings and turnouts, at various points along the line, amounting in the aggregate to 6.31 miles.

The addition of three miles to the second track, between Bergen and Churchville, on the Buffalo and Rochester division.

The erection of buildings at various points on the line, for Freight and Passenger accomodations.

The substitution of Iron for Wooden Bridges, referred to in the last Report, has been continued. During the year this substitution, reduced to single track, has amounted to 697 feet, making with the amount heretofore reported, an aggregate of 4,670 1-6 feet now upon the line.

The renewal of Iron Rails during the year, amounted to 8,297 tons, equal to 84½ miles of single track.

The number of Ties renewed during the same period, was 259,265.

The equipment of the road consists of 229 locomotives; 196 first class 8 wheel passenger cars; 35 second class and emigrant cars; 63 baggage, mail, and express cars; 3,212 freight cars; and 350 cars for gravel and other service. All the engines are in good condition; 14 locomotives, and 483 freight cars have been added during the year, and charged to repairs of machinery in expense account.

Miles run by passenger trains, 1,753,215; by freight trains, 3,233,565; by other trains, 381,892. Aggregate miles run by passenger cars in passenger trains, 5,389,141; do., by baggage, mail and express cars, do., 2,452,301—aggregate miles run by all cars in passenger trains, 7,811,442.

Number of passengers carried in the cars, 2,276,977. Miles traveled by passengers 119,028,024. Tons of freight carried, 1,387,433. Total movement of freight, or number of tons carried one mile, 296,963,492.

The rate of speed adopted for ordinary passenger trains is 28 miles per hour; by express trains, 35 miles; by freight trains, 15 miles.

Length of main line from Albany to Buffalo 297.75 miles; length of side, or parallel branch lines, 258.13—total length of first track, 555.88; length of second track on main line and branches, 246.53; length of sidings, turnouts and switches, 132.56—total length of equivalent single track, 924.97 miles.

Length of Niagara Bridge and Canandaigua Railroad, (leased) 98.46 miles; Branch line to elevator at Tonawanda, 1.63; sidings, turnouts and switches, 3.42—total length of equivalent single track, 103.51 miles.

Jamestown and Franklin Railroad.

The Crawford *Democrat* states that the "Lake Shore Railroad Company intend to build a railroad from Jamestown to Franklin, intersecting the Pittsburg and Erie Railroad at Jamestown. This has been brought about by the move on the part of the Atlantic and Great Western Railroad, who are extending a branch from Orangeville to Sharon. The contract for this road was let last week."

We know nothing about the above, and have only to say that we hope it is true. We care not who builds the road, so long as it is built. When completed, it will have plenty of business. The line runs through the richest deposits of coal in Western Pennsylvania, and which have hitherto been inaccessible to a market. This of itself is a large item. Then we have the oil, which will form another large item of freight, aside from the traffic of all kinds which such a road would immediately cause to spring up. If the owners of the Lake Shore, or any other corporation able to build the road, have seen the good investment that lays before them, they have acted wisely in securing it.—*Venango Spectator Nov.* 26.

Railway Milk Traffic.

Few persons are aware of the extent of the transportation of milk by means of railways terminating in a large city like New York. They furnish us with innumerable articles of necessity, but none more important to our health and comfort than milk. We have before us tables furnished for the recent report of the Patent Office which are very interesting, and show the traffic in this particular of the Erie, Harlem and Long Island Railways in a most satisfactory manner. And yet, strange to say, large as the quantity conveyed over these roads by steam, one half the milk consumed in the city of New York is still conveyed there in wagons.

Showing the quantity of milk received in the city of New York, at the depots of the Harlem, Erie and Long Island Railroad Companies, for the year ending June 30, 1861.

The maximum daily rate by the month, 188,484 quarts, was delivered in July.

The minimum daily rate by the month, 124,871 quarts, was delivered in January.

Thirty thousand six hundred and ninety-four cows are required to supply the milk transported over these railroads.

The average cost of transportation is $552,484 18 annually. This includes the return of the cans.

The average cost of the milk as it is received for transportation, is $1,104,968 36 annually.

The discrepancy between the total amount in the above statement and that in No. 4 arises from the fact that a few small stations were not reported in the above.

In 1847 this railroad company transported less than 15,000,000 quarts of milk over their road. In 1861 they carried nearly 25,000,000 quarts.

It is found that notwithstanding the milk is brought in some instances as from Chatham by the Harlem road 128 miles, and kept in some instances from 48 to 60 hours, it is perfectly sweet and potable, and the act of transportation does not injure it, while by the process of wagoning any great distance it becomes churned, and is not so fit for use. Very curious results have been ascertained by the staticians with regard to the consumption of milk in various of the States.

Five States, New Hampshire, Vermont, Massachusetts, Connecticut and New York use over 8 per cent of their milk for cheese, and all south of Pennsylvania but one per cent.

Rhode Island, Massachusetts and Maryland, produce the least in proportion to their population.

Vermont, New Hampshire, New York and Wisconsin, produce the most in proportion to their population.

Vermont, Virginia, Wisconsin and New Hampshire consume the most in proportion to their population.

Virginia consumes as food nearly 70 per cent. of the entire milk product of that State, Rhode Island over 60 per cent.

Maryland, Delaware, Massachusetts and Wisconsin over 50 per cent., severally.

New York and Vermont manufacture into butter nearly two-thirds of their entire milk product.

Virginia uses less than one-third of its milk in the manufacture of butter, and in this fact we see the reason why the article brings such fabulous prices in that State during the present rebellion.

Rhode Island uses the largest percentage in the manufacture of cheese, New York the largest percentage in butter, and Virginia the largest percentage as food.

Virginia uses the smallest percentage in butter and cheese, and Vermont the least percentage in food.

Other curious facts are ascertained. The greatest average daily consumption in thirteen Northern and Middle States, including Virginia, excluding Ohio, Kentucky, Tennessee, and all their Southern and Western neighbors, from which there are no returns, is one pint. The greatest daily average is found in Vermont and Virginia, viz: 1.6 pint.

The least is in Massachusetts 0.6 pint. In the City of Washington it is but the 1-10th of a pint, for the milk there is entirely supplied by the people residing within its limits. The transportation by railway is almost unknown for there is no region of supply.

In this city half a pint is the average daily supply for over 600,000 persons.

It is also found that the milk transported over the railroads keeps sweeter for a much longer time than that brought by wagons, and the reason is that, more care is taken of the article; it is cooled down after milking to 40° Fahrenheit, and kept quiet at that temperature till it is carried to the cars.

The other classes of milkmen milk to suit their own convenience, and transport the fluid warm. In some of the largest dairies the greatest system prevails. The cows are milked in the cool of the evening, and in the morning before sunrise, the milk is strained into tin cans, which are placed in tanks of cool spring water. Care is taken not to mix the one milking with the other, and to prevent any stirring of the milk while in the process of cooling, nor any mixture until the temperature is equal, both in the morning and evening product. The cans are then placed in a wagon covered over with wet cloths and carried over to the railroad depot, from whence in the night time only it is transported to the city. Thus the milk arrives cool and in good condition. The cost of transportation averages 1 per cent., the producers sell it at the stations for 2 cents, and when it is ready for delivery in this city, therefore, the whole cost is 3 cents. It is retailed to customers at 6 cents, and thus affords a very handsome profit.

We thus perceive how greatly we are indebted to our three principal railways for our milk, and we may suggest this important fact that the railway milk is from the very necessity of the case preferable in all respects to that from neighboring dairies by wagons. If it was not properly cared for, strained and cooled, it could not be transported any distance with safety. While in the other case, it is brought in a warm state, carelessly handled, and disposed of often while it is undergoing a change.

Those of our readers who wish to study the subject farther, will find it admirably treated in the recent publication of Dr. Loomis on the subject of the consumption of milk.

Russian Railways.

The line from St. Petersburgh has been extended to Warsaw, and that from Moscow to Nidjo-Novogored.

Erie and Pittsburgh Railroad.

We noticed in our last paper that the Buffalo and Erie Railroad Company had projected a railroad from Jamestown to Franklin, and let the contract for building the same. It is of course a branch of the Erie and Pittsburgh Railroad, but is being built under the joint auspices of the two roads mentioned. In addition to this move for the accomplishment of the end sought in the construction of the Erie and Pittsburgh road, they have purchased of the Erie City Railroad Company and had transferred into their own hands, by consent of the city, the water lots in the bay which were donated by the city of Erie to the Erie City Railroad Company some years since; and they now propose to commence the construction of docks and warehouses upon these lots at an early day. The route which has been adopted to reach these lots is down the valley of the cascade, west of the city, and along under the bluff into the corporation. They will also have a fine depth of water and a good site for the location of docks at the mouth of Cascade Run, where the transhipment of coal from the cars to vessels can be most advantageously made. This feature of the road is the one which will benefit the city most, and we are glad to notice the fact that the work will soon be commenced.—*Erie City Dispatch, Nov. 29.*

The National Finances.

Statement of Receipts and Expenditures of the United States for the fiscal year ending June 30, 1862.

Balance on hand July 1, 1861	$2,257,065 80
From customs	49,056,397 62
From lands	152,203 77
From miscellaneous sources	931,787 64
From direct tax	1,795,331 73
From Loans—	
For 3 years' 7.30 bonds	122,037,585 34
For 5.20 years' 6 per cent. bonds	13,990,600 00
For Oregon War bonds	1,000,700 00
For 20 years' bonds, 6 per cent., at par, for $50,000,000 7 per cents.	46,308,127 17
For 2 years' Treasury notes, under act of June 22, 1860, and March 2, 1861	14,019,024 00
For 60 day Treasury notes, under act of March 2, 1861	12,896,350 00
For Treasury notes under acts Feb. 8 and March 2, 1861	3,500 00
Under Loan act, Feb. 8, 1861	55,257 50
For United States notes, acts July 17 and Aug. 5, 1861, and Feb. 12, 1862	60,030,000 00
For United States notes, act Feb. 25, 1862	98,620,000 00
From temporary loan, act Feb. 25, 1862	66,479,324 10
From certificates of indebtedness, acts March 1 and 17, 1862	49,831,979 73
From temporary loan, in anticipation of popular subscription	44,375,000 00
Total receipts	$583,885,247 00

The expenses for the same period were $570,841,700 25, leaving a balance in the Treasury of $13,043,546 06.

The receipts for the fiscal year ending June 30, 1863, from all sources but loans, are estimated as follows:

From customs	$68,041,736 59
Lands	88,724 16
Miscellaneous sources	2,244,316 32
From direct taxes	97,077,021 72
Balance at the commencement of the year	13,043,546 81
Total	$180,495,345 60

The expenses for the year ending June 30, 1863, are estimated at $788,558,777 62.

The receipts from loans have been $200,129,717 01. The receipts from sources already provided, are estimated at $131,021,197 35, leaving the sum of $276,012,517 66 yet to be provided.

The estimates for the fiscal year ending June 1, 1864, are as follows:

RECEIPTS.

From customs	$70,000,000 00
From lands	25,000 00
From miscellaneous sources	3,000,000 00
From internal duties	150,000,000 00
Aggregate	$223,025,000 00

EXPENDITURES.

Balance of former appropriations estimated to be unexpended July 1, 1863	$200,000,000 00
For civil service, foreign intercourse and miscellaneous	25,081,510 08
For Interior Department, Indians and pensions	10,346,577 01
For the War Department	738,829,146 80
For the Navy Department	68,257,255 01
For interest on public debt	33,513,890 50
Principal of public debt	19,384,804 16
Total	$1,095,413,183 56
Of this amount of $1,095,413,183 56, it may be safely estimated that there will remain undrawn on the 30th of June, 1864, the sum of	250,000,000 00
Aggregate for the year	$845,413,183 56
The estimated receipts, as before stated, for that year, are placed at	223,025,000 00
Leaving to be provided for by loans the sum of	$622,388,183 56

ASCERTAINED PUBLIC DEBT.

The liquidated amount of the public debt of the United States on the 1st day of December, 1862, was as follows:

Under what Act.	Rate of Interest.	Amount.
Loan of 1842	6 per cent.	$2,883,364
" 1847	6 "	9,415,250
" 1848	6 "	8,908,342
" 1861, Feb'y	6 "	18,415,000
" 1861, July	6 "	50,000,000
" 1850	5 "	3,461,000
" 1858	5 "	20,000,000
" 1860	5 "	7,022,000
Total funded to Feb. 25, 1862		$120,105,956
Loan of 1862, Feb'y	6 per cent.	23,750,000
" 1862, Oregon	6 "	878,650
Total funded to date		$144,734,606
Treasury Bonds, 1861	7.30 per cent.	150,000,000
" Certific's, 1862	6 "	87,363,000
" Deposits, 1862	4a5 "	79,798,000
Old Treasury Notes	6 "	3,382,162
Total interest bearing		$465,277,768
United States Notes of Circulation		222,932,111
Total debt		$688,209,879

The above amount, of course, does not embrace a large amount of unadjusted debt.

The total debt of the Government on the 30th day of June, 1863, is estimated at $1,122,297,403; on the 30th of June, 1864, in case the war continues, at $1,744,685,586.

Canadian Oil Wells.

British speculators are now beginning to propose incorporated (limited liability) companies to work the Canadian oil wells, allured by the inexhaustible supplies, and the great profit made on the importation of the article. It can be delivered in the Thames at $40 per ton, and sells for from $65 to 70. It is used abroad for lubricating machinery, a solvent for caoutchouc and other gums, benzine, a substitute for turpentine and to make paraffine candles. It is also the basis of many of the most beautiful dyes, as mauve, magenta, rosalin, azarine, &c. The value of the import of petroleum into England was last year twenty millions of dollars. The standard of mere inflammability is fixed at 130° Fahrenheit. This is lower than that designated by American chemists.

City Railroad Cars—Accidents to Pedestrians.

INFANTILE NEGLIGENCE; WHEN CARELESSNESS OF PARENTS MAY BE IMPUTED TO THEIR CHILDREN. DUTY OF PARENTS AND GUARDIANS; THEIR NEGLIGENCE A QUESTION FOR THE JURY.

This action was brought by the guardian of Harvey Mangan against the Brooklyn City Railroad Company, to recover damages for injuries sustained by Mangan, in consequence of being run over by a passenger car upon that company's road. Mangan was three years and seven months old at the time. The defence was that the injury was caused by the negligence of the plaintiff himself, and not by the negligence or fault of the defendants, or their agents or servants.

The accident happened in July, 1858, at the corner of North Tenth and First streets in Williamsburgh. Just previous to the occurrence the child was at home at his father's house in First street, three doors from the corner of North Tenth street, through which latter street the railroad passes. His mother and a step-sister were in the basement hall washing, and the child was playing in the basement, under their observation. The street door was closed and locked, and the child was not left alone during the afternoon, except at about twenty minutes before four, when one or both the women went into the yard to hang up clothes to dry. One of these women testified, that at that time she saw the boy on a balcony in the rear of the house with his brother. When she returned to the room or the hall, he had probably escaped through one of the front basement windows, although she was not aware of it. In a very few minutes, he was brought home, with his leg crushed by the car wheel; another witness who saw the occurrence said that it happened before four o'clock. The defendant's driver who had control of the car, was sitting at the time upon the railing of the platform of his car, his face turned away from the horses or mules, and from the direction in which the car was going. His attention was absorbed by a bird which he had in his hand, while the reins of his animals were twisted about the brake of the car. The car was drawn by mules and was proceeding at a steady though not a rapid pace.

At the close of the plaintiff's evidence on the trial, the Court ordered the complaint to be dismissed, on the ground that the parents of the infant were guilty of negligence in allowing it to go thus unattended to the street, and for this negligence of the parents the child was responsible and could not recover damages from the company; his own negligence concurring with the negligence of the defendant to produce the injury. The plaintiff then appealed to the Kings General Term of the N. Y. Supreme Court, which Court now reversed the decision of the Court below, and ordered a new trial. The following opinion was rendered by the General Term.

EMOTT, J.—It is not using too strong language to say that this was gross negligence on the part of the driver of the car. It was in effect to leave the vehicle moving uncontrolled through the public streets—a vehicle which is in some respects more dangerous to other passengers on foot or in carriages than any ordinary carriage. If the danger of a collison with a railroad car is not greater, the consequence of such a collision when it does occur, are far more serious and less easily prevented than in the case of common vehicles.

The plaintiff was coming down North Tenth street as the car was coming along First street, and in attempting to cross the track in advance of the car, he was struck by some projecting portion the car, thrown down and run over by both wheels. At what distance from the crossing of the two streets the car was when the plaintiff set out to cross First street, does not perhaps very distinctly appear. * * * * No doubt if the car was so near when the plaintiff set out to cross the street that it was rash and hazardous to attempt to do so, then, in an ordinary case, possessing no other features, the negligence of the person injured would deprive him of any redress for his injury, notwithstanding the misconduct of the person entrusted with the car. No matter how gross or evident the negligence of the driver of the vehicle, if another by his own negligence expose himself to injury from the vehicle, he has no remedy. * * * * This, however, is not the point upon which the present case turns. There is a fact in the case which is yet to be mentioned, that renders the questions which have now been referred to, comparatively if not wholly immaterial. The plaintiff was an infant of tender years; at the time of this occurrence he was a child of less than four years of age. He was therefore, necessarily, incapable of exercising forethought or discretion, or of anticipating or protecting himself against the dangers to which he would be exposed in the thoroughfares of a great city. Because he was incapable of discretion, however, he was not therefore, above all law. The plaintiff had parents living, and he was under their charge and protection. The law makes him responsible for their acts and omissions as if they were his own, because this is the only way in which the rule of mutual care and responsibility between persons using the highway can be enforced in such cases. Their negligence must be regarded as his negligence, for the purposes of this action. Although want of care cannot be imputed to a child for not avoiding a passing vehicle, it may be charged upon those who have the charge of the child, if they suffer him to go unprotected, where vehicles are passing, and where care and forethought must be required, beyond what he is capable of exercising. The rule and its reason remain the same, but its application is modified, or directed to another part of the case. I am not, however, prepared to admit the converse of the proposition to which I referred a moment ago. The defendants in such a case as this are not above all law, any more than the plaintiff, because he was of tender years and incapable personally of care and forethought. Their servant was guilty of grevious negligence, and they are liable for the consequences to the plaintiff, unless those for whose conduct the plaintiff is responsible was also guilty of negligence which contributed to the result. To allow a child of such tender years to go at large in a public street, without a protector, would unquestionably be such negligence in his parents or guardians. * * * * * * * But the fact that the child is in the street alone, or in the way of a vehicle, alone, is not conclusive that he is there by the negligence of those for whose care the law holds

him responsible. It is a fact which admits of explanation, and notwithstanding which, the question of negligence is open to inquiry. A child may be in the street in the immediate charge of a competent person, and it may escape from that charge and fall into danger and disaster, or it may be suitably guarded and restrained from going into the street, and yet it may elude its restraints, and be in the way of danger and destruction before its protectors are aware of it. The question then is, whether these protectors exerted due care and diligence to prevent the child from going where it would necessarily be in danger. It is a similar question to that which occurs in the case of an adult, when he must prove that he neglected no precaution and exercised due forethought to avoid such dangers; except that the care and watchfulness are required at an earlier stage of the occurrence, and the inquiry goes further back in the chain of causes which lead to the result.

My learned associate, before whom this cause was tried granted a non-suit, on the ground that the presence of such a child alone in the street, was of itself such an act of negligence, or such evidence of negligence in his parents, that he could not recover for the injury which befell him. I agree that, unexplained it would be so. But the question is, whether this child was in the street, by the consent or through the neglect of his parents, or in spite of their precautions; and whether these precautions were sufficient to answer the demands of prudence and consideration.

* * * * *

It is exceedingly probable that the child after getting out of the window, ran directly down the street, and at once encountered the car at the corner. The sister of the plaintiff states that she never knew the child to go or be out alone in the street. The window through which he got out was open, and was about four feet from the floor. I think we can see, that in the circumstances of such a family as this appears to be, it would be impossible to provide a child of this age with a constant companion—one who should be every instant at hand. The support of a family is no less a duty of the parents than its protection, and for this all who can labor must be constantly occupied with their daily task. The law cannot exact more than nature dictates; nor can I say that the act of leaving a child of three years of age alone for a few minutes in the house while the door was closed, although a window was open, because its mother or sister were called into another part of the premises, in the discharge of their household duties, was of itself an act of negligence. Was it then a want of ordinary care to leave a window four feet from the floor open, through which the child might escape by climbing to it and out of it? The degree of care demanded of the parents of a child, under such circumstances, is the same which is exacted of a person of discretion in the protection of himself. It is ordinary care, the apprehension of, and the provision against ordinary occurrences and risks. The question is, whether the person in charge of the child, leaving it in the room, or upon the balcony in the rear of the house, where it was last seen and whence it must have returned to the room, was bound to foresee that the child might or would clamber out of the window, and therefore to fasten it. To justify this non-suit we must assume that this was so, and that a jury could not even have been permitted to find otherwise, or we must assume that the women were negligent in not pursuing the child into the street, which implies that he was there so long, that they ought to have known it, and that they could have overtaken him, and thus prevented the calamity which ensued. * * * *

The question of their negligence ought, at least, in my opinion to have been left to the jury. It involves various considerations and inferences, and it is not so clear that I am prepared to decide it as a question of law against the plaintiff. I am not to be understood of course as saying, on the other hand, that I consider it the duty of the court to have decided this question expressly in favor of the plaintiff. It is sufficient that there is a question of mingled fact and inference, and not purely of law, and therefore a question for a jury, under proper instructions.

Non-suit set aside, and a new trial ordered.

Pacific Railway--Our Mineral Resources.

The following passages are taken from the Report of Judge Edmonds, Commissioner of the Land office, to the Department of the Interior:

By the act of Congress approved 1st May, 1862, to aid in the construction of a railroad and telegraph from Missouri to the Pacific, a grant of land is made, excluding mineral, of every alternate odd-numbered section, to the amount of five alternate sections per mile, on each side of the route.

In regard to the Missouri or Eastern Division of the road, the agent of the Leavenworth, Pawnee and Western Railroad Company of Kansas filed, in July last, in this office, a map and diagram of the probable route of the road west of the town of Lawrence, in that State, from a point on the left bank of Kansas river opposite said town: West along the left bank of said river to the left bank of the Republican Fork, thence along the left bank of that Fork to the 100th meridian of longitude west from Greenwich, and instructions under date 17th July, 1862, were dispatched accordingly to the proper officers in Kansas and Nebraska, to make the requisite withdrawal of public lands along the route, within fifteen miles thereof, under the requirements of the 7th section of said Act of 1st July, 1862.

In regard to the Pacific portion, the agents of the Central Pacific Railroad Company have likewise filed in this office a map and diagram designating the probable route of said road east from a point at the Sacramento river, near the mouth of the American river, in California: thence in a northeasterly direction to the big bend of the Truckee river, in Neveda Territory. Instructions were therefore addressed, 2d of August last, to the Register and Receiver at Marysville, California, to make the necessary withdrawals.

A question has been raised, in connection with the withdrawals in the Junction City District, as to whether those withdrawals should embrace the *even*-numbered or *non*-granted sections, and whether such even-numbered sections should not be relieved from withdrawal and laid open to pre-emption, sale, and location.

The subject was considered in instructions bearing date 12th September, 1862, for the government of the Register and Receiver, as submitted to the Secretary of the Interior, and approved by him on the 24th September, 1862.

The principles laid down in those instructions protect, in virtue of the act of March 27, 1854, pre-emptors upon either the odd or even-numbered sections, who had actually settled thereon before the receipt at the District Land Office of the order of withdrawal, and in accordance with the act of March 3, 1853, recognize the right of pre-emption settlement upon the even-numbered sections, even subsequent to the reception of said order, where such settlements are made prior to the "final allotment of the ultimate sections to the Railroad," but at the enhanced minimum of $2 50 per acre, as stipulated in said act of 1853.

In view of the 3d and 7th sections of said act of July 1, 1862, it is held, however, that this office has not the power to lay open to ordinary sale or location the even-numbered sections, without the further order of Congress.

In passing from the consideration of the preliminary questions which have arisen in connection with the Pacific route, the importance of which to the prosperity of the country cannot be over-estimated, it will be found that Congress has dealt with the measure in a corresponding spirit of liberality; as the grant, which awards to the work five alternate sections per mile on each side of said road, thus concedes a belt of 6,400 acres for every mile of its length, embracing about 15,500,000 acres.

That measure, with our thirty thousand miles of railway, now spreading from the Atlantic beyond the Mississippi, will form a great continental system reaching from ocean to ocean, eventually intersecting every political subdivision of the United States, thereby giving impetus to domestic trade and intercourse, opening new fields of labor and prosperity within our limits, while our wealth will be increased by the rich Eastern trade, through our mercantile marine on the Pacific, with China and Japan and distant India.

Coal is found in great variety and abundance between the Mississippi and the Pacific. That important element, so essential for domestic, mechanical, and for navigation purposes affecting our vast internal intercourse and trade, and our external commerce, is, of course, a very prominent subject of interest to our people. The extent of the twelve coal bearing States of the Mississippi holds but a small proportion to the immense coal-fields west of that region, as we have information reporting the existence of coal in Dakotah, Kansas, Nebraska, Colorado, Utah, Nevada, California, Oregon, and Washington.

A railroad about six miles long is projected from the San Joaquin, extending south toward the Mount Diablo, for the transportation of coal from the mines there, designated as the Pittsburg, Union and Eureka. Discoveries of coal have been made at Bellingham Bay, Washington Territory. This coal contains a very large amount of oxygen, and but little hydrocarbon: so much so that it gives off comparatively but little combustible luminous gas or smoke, and appears to be almost as difficult of ignition as semi-anthracite.

It is regarded as a fuel superior to any tertiary lignite, approaching the composition of the coal of the Western States, taking a high rank as a fuel in comparison with ordinary lignites.

Then there are the Willamette River and Cape Flattery coals, belonging to the lignite type, and serviceable for the smelting of iron and for ordinary fuel, some of the Cape Flattery coal being reported as pretty good for steamboats.

In Nevada, good coal has been discovered in the neighborhood of Dayton, formerly China

Town, and superior specimens have reached here from Colorado, showing the wealth of that Territory in this great industrial agent.

The great auriferous region of the United States on the western portion of the continent stretches from the 40° north latitude and Puget Sound to 31° 30′ parallel, and from the 102° of longitude west of Greenwich to the Pacific Ocean, embracing portions of Dakotah, Colorado, all of New Mexico, with Arizona, Utah, Nevada, California, and Washington Territory. It may be designated as comprising 17 degrees of latitude or a breadth of 1,000 miles from north to south, and of nearly equal longitudinal extension, making an area of more than a million of square miles.

This vast region is traversed from north to south, first, on the Pacific side by the Sierra Nevada and the Cascade Mountains, then by the Blue and Humboldt; on the east by the double ranges of the Rocky Mountains, embracing the Wasatch, the Wind River chain, and the Sierra Madre—stretching longitudinally and in lateral spurs—crossed and linked together by intervening ridges, connecting the whole system by five principal ranges, dividing the country into an equal number of basins, each being nearly surrounded by mountains, and watered by mountain streams and snows—thereby interspersing this immense Territory with bodies of agricultural lands equal to the support not only of miners, but of a dense population.

These mountains are literally stocked with mineral, gold and silver being interspersed in profusion over this immense surface, and daily brought to light by new discoveries. The precious metals are found imbedded in mountains of quartz, rich washings marking the pathway of rivers and floods.

Besides their wealth in gold, no part of the world is so rich in silver mines as Nevada and New Mexico; yet these may be estimated as only in proportion to the gold fields, which are in process of development with amazing results. The recent discoveries in the Colorado, or southern portion of California, and in the region stretching thence away up to, and north of, the Salmon River in Washington Territory, are every day stimulating the mining enterprise of our people.

Prior to the gold discoveries in 1848 at Sutler's Race, in California, the gold product of the world was only an annual average of $18,000,000.

In 1853 the yield of California was $70,000,000, about four times the aggregate gold product of the world prior to 1848, and that sum may be set down as the present average from that State alone. If we compare the known gold fields elsewhere in our public domain with the yield of California we would have, if an equal ratio of labor was applied, an annual value of between $300,000,000, and $400,000,000.

Even in the distant Territory of Washingington, the extreme mosaic block of the Union, the product of the Salmon River Mines has been estimated at $20,000,000 the present year—the developments there, too, having been made under every disadvantage; first, in a season of unusual severity, with deep snow; next, in restricted facilities of travel into the Interior, and with inadequate labor, and in times of domestic turmoil.

An immense revenue may be readily obtained by subjecting the public mines either to lease, under quarterly payments or quarterly tax, as seignorage, upon the actual product, under a well-regulated and efficient system, which would stimulate the energies of miners and capitalists, by securing to such classes an undisputed interest in localities for specified, and, when the conditions as to payment for the usufruct are complied with, for unlimited periods, and, while effecting this, with benneficial results to them, would relieve the necessities of the Republic.

Assuming the national debt, on the 1st of July, 1863, to be $778,000,000, the Commissioner says that a tax of some 8 per cent on the whole yield of the mines would, upon the maturity of a proper mining system, and when the same shall eventually go into full operation, pay off this interest, enable the Government to reduce, by at least two-thirds, the existing direct tax, and from the residue and imposts, have an annual income sufficient to support the Government, and provide a fund for the gradual extinction of the public debt and restore the currency to a metallic basis.

The usual size of a mining claim in the quartz region is 100 feet on the line of the lode or vein, and 100 feet on each side, equal to an area of 20,000 square feet; or say 1,200 claims to the square mile. Allow that only one-hundreth part of the mountain surface is occupied by paying leads or veins, there will be space for 3,600,000 claims. But Governor Evans of Colorado estimates the already discovered gold-bearing region of that Territory as affording ample room for 800,000 claims, and states that new discoveries are daily increasing this area.

A glance at the map is sufficient to show that the mineral region of Colorado occupies less than one-sixth of the whole extent under consideration; but assume it to be one-sixth, there will be ample extent on this basis for 4,800,000 claims which, if worked, would give employment to 20,000,000 of men. Quartz that yields $12 per ton will pay in favorable localities, but there are many veins now worked that yield from $20 to $500 per ton, and some that yield from $500 to $2,000 per ton, varying in different parts of the same lode. Some of the recent discoveries are estimated as high as $20,000 per ton, but these have not been worked.

In addition to the deposits of gold and silver above specially alluded to, various sections of this whole region are rich in precious stones, marble, gypsum, salt, tin, quicksilver, asphaltum, coal, iron, copper and lead; mineral and medicinal, thermal and coal springs and streams.

None of these mines have been worked for a great length of time, except the placers of California, and much the largest portion of them are comparatively recent discoveries; yet it has been fully demonstrated that the deeper the mine is worked the richer is the ore or rock. Mines that barely paid at the surface, are yielding enormous profits at a depth of 150 to 200 feet. And when the geological formation of this region is carefully considered it will be conceded that even the precious metals must be found in masses and in position, if a sufficient depth shall be reached.

The above estimate of the extent of the mines may seem extravagant, but it is believed experience will demonstrate that the estimate is too low. Not now, nor for many years to come, because the population is not there, but as fast as the population does reach that region the correctness of these conclusions, it is believed, will be vindicated.

Within the last eighteen months more has been done to establish the position assumed than all the discoveries previously made. The coming year and a half will do still more.

The yield of the precious metals alone of this region will not fall below $100,000,000 the present year, and it will augment with the increase of population for centuries to come.

The value of these mines to the country is absolutely incalculable—to the Government they may be made to yield in revenue just in proportion to the number of men employed in working them. This year they should yield $10,000,000, and would do so under the operations of a well matured system. The experience of miners in those districts which have been sufficiently worked, has demonstrated the propriety, and, I may add, the necessity of dividing the mineral lands into small parcels or claims.

This office cannot recommend any measure for the sale of the mineral lands, but would advise the retention of the fee in the United States, and that they be held open to the free occupation of all our people, subject only to a nominal annual license, and such monthly, quarterly, or annual moderate percentage upon the product as shall be prescribed by law. A limitation as to the quantity which may be held by any person is also advised, with the guaranty that such quantity may be retained so long as the location shall be occupied, worked, and payments duly made to the Government.

Metropolitan (Horse) Railroad.

The annual meeting of this company was held in Boston on the 10th inst., at which the report of the directors for the year ending Dec. 1, 1862, was presented.

The gross revenue was		$300,806 52
Ordinary expenses	$224,057 40	
U. S. Taxes	1,161 07	
Paving streets	10,695 68	
		235,914 05
Net earnings		$64,992 47
Dividend June 30, 1862 5 per cent	$30,000 00	
Am't applied to aid the div. Jan. 1, 1861	1,767 90	
		31,767 90
Balance Dec. 1, 1862		$33 114 57
Tickets sold and not cancelled		6,381 66
Estimated net income of Dec.		6,000 00
Applicable to div. Jan. 1, 1863		$45 456 13

The increase of income in 1862 over 1861, has been $14,536 37; reduction of ordinary expenses, $26,586 54. A night car has been put on between Boston and Roxbury, and additional trips made at business hours. Small granite blocks in place of trap stone are recommended for pavement, as less expensive than the latter, and giving a better foothold to horses. They are now on trial on Washington street. The stock of horses on hand is 515 an increase of 16. The average price paid for horses has been $100 15. During the past two years, 28 cars have been rebuilt, and 22 thoroughly repaired; and large sleighs have been built, and runners provided for seven of the lightest cars. The West Roxburg railroad has been purchased to avoid a rent of 10 per cent, and new stock issued at the rate of one share for four, to pay for the purchase and new structures, and pay off the floating debt.

The following gentlemen were chosen directors for the ensuing year: E. H. Derby, President; Oliver Brewster, W. J. Reynolds, W. H. Hill, Dr. John Fliot, Samuel Shaw, D. H. Bayley, J. R. Blake and Wm. Brown.

Cars will run over the track of the Suffolk road to East Boston and Chelsea ferries, and connecting with Cambridge road, as soon as the weather is such as to allow tracks to be laid.

American Railroad Journal.

Saturday, December 20, 1862.

Stock and Money Market.

The gloom of the past week was prophetic. Our army after a desperate struggle against the enemy, in his strong lines beyond Fredericksburgh, with heavy losses, has been obliged to seek safety in the position from which it made its advance. It is due to the American commander to credit the current report, that the crossing of the Rappahanock, was the result of imperious orders from Washington, and against the opinions in council of all his principal general officers. It is not our purpose to enter into any discussion of military affairs, though we might perhaps find a good excuse for doing so, since from the class of railroad engineers and superintendents, some of our most distinguished officers have been taken. Railways and Telegraphs have indeed become the greatest agencies in war operations, and the strategy of the old school has disappeared before that of the new. But it is our vocation to note the changes which occur from week to week at the Stock Exchange and in the Money Market, under such influences and disasters as too frequently occur.

It must, however, be remembered that this is the season of the year at which the market assumes a lethargic appearance, for almost all business men close up as many floating transactions as possible, so as to begin the new year afresh; bills are collected, accounts sent in, differences adjusted; and a thousand other arrangements invariably precede the holidays. Capital-

ists and bankers have accordingly called in their loans as far as practicable, especially from weak borrowers, whose name is legion; money is, it is true, in excess of the demand by strong borrowers, but the rate has gradually tightened from 4 per cent of last summer, to 6 and 7 per cent today. But few private loans are now running at 5 per cent. Gold, our new barometer and index of the national pressure, has fluctuated with every gale of rumor, rising and falling in the scale of the 30's.

Sterling exchange has kept ahead as usual by the difference of the legal rate of the pound, the freight, charges, and insurance. The range according to variety has been between 143 and 146. Custom house demand notes bring readily about 127a128. When these are exhausted, importers may expect to meet a further advance in specie.

Government securities stand well but are rather dull of sale, and certificates of indebtedness which are always slow of payment are about 8⅛ per cent below par. Some relief is expected in the Money Market, strange to say, from the expedition of Gen. Banks. So much expectation as to his mission has prevailed, it was so in accordance with the wishes and judgment of the people, that he should co-operate in the attack on Richmond, they could not believe our armies were to be dispersed again for distant operations. We will therefore, state on authority which in all other cases we should take without hesitation, that the expedition is a cotton expedition. It may, says our informant stop in at Mobile to take that city, dominate the Alabama river and cooperate with our forces from the Mississippi, but Texas is the real point. There will be obtained enormous quantities of cotton. The population, particularly the foreign portion of it, is friendly to the Union which first sheltered them, being anxious for direct trade with the north, and the holders and bailees of the cotton crop equally so at its present prices. The name of Judge Peabody is connected with the rumor we give our readers, as the person who is to be the legal authority of the Government, and Mr. Stevens the Secretary of the Chamber of Commerce who went with the expedition, and is a thorough accountant and commercial man, may on the same hypothesis be set down as Mr. Chase's financial agent to conduct the operations connected with the regulations of the Treasury.

At our present writing the rumor appears very plausible. Besides it is said that a large American force, in Texas just now, would give a moral support to the Mexicans in their resistance to the French invaders.

Railway shares take their places sympathetically with the feeling of the hour, and the quotations correspond with the ups and downs of the market, with the prevalent conviction however, that the real value of the principal lines is thoroughly ascertained, and their permanent dividend paying character secured.

No action in Congress of any moment has taken place except in the evidence exhibited there by resolution, of a determination to pay the interest of the Government loans in gold; a most wise conclusion, and one that will prevent any farther depreciation in our stocks held by persons abroad. Strong efforts are being made to give the bankrupt bill a start. It is evidently a necessity for an adventurous commercial people, and must be adopted for the nation, as it has been defectively in all the States. Their system is not uniform and this creates the need of a National law. Nor is it necessary for Congress to wade through the details of a long and questionable enactment; involved, uncertain, ill drawn. All it has to do, is to pass a short bill of three or four sections declaring who may take the benefit of the act, who shall be deemed guilty of fraud, and define what shall constitute the count or commission of bankruptcy, and how many courts or commission there shall be. Then only one section more will be necessary, viz: that the Attorney General of the United States shall forthwith prepare a code of practice under the law, providing for all the technical details, and that then this code shall govern the cases and be a part of the bill itself. We are surprised that this simple method has not suggested itself to some of our intelligent lawyers who are Members of Congress. We understand that the plan will be brought to their attention. It will secure a bill and save a world of time and trouble.

The plan of organization of banks under a National Law is sustained by the friends of Mr. Chase in accordance with his own convictions, that a combination of national credit combined with private capital is radically defective and can not be effected with so much security and profit as through such banks as he proposes. His plan is not to exclude the idea of notes issued directly by the Government for use as money. On the contrary such issues form the most convenient and safe means of transition, and after the transition shall have been accomplished, will from one occasion to another, prove as it is hoped by them of great utility.

We are confident Mr. Chase has never contemplated loans at great discount or at high interest, or unless at very low interest for a long time. The United States notes are a good protection against such loans. When, however, loans can be obtained at such rates as par for the Five-twenties, the fact itself indicates a condition in which it is expedient to borrow. It is natural that gentlemen in this city interested in the secured Banking system, and in Ohio similarly circumstanced, and those too interested in local banks in other parts of the Country, should fear some abridgement in passing from a state to a national system, and should incline to look with disfavor on the proposed plan. But to the friends of the proposition it appears clear, that they exaggerate the inconvenience even to their own interests, and lose sight of the great and permanent advantages to flow from the system, even to the capitals of their own institutions. But were the case as they think it, should not public considerations prevail? We can vouch for the sincerity with which Mr. Chase has proposed his system, and in the light we present it, it seems no great bugbear. Yet the substitution of United States stocks at or nearly par as security for our local currency would if compulsory, necessitate the throwing of a large amount of our State Stocks on the market, to such an extent as to knock down its market price from the liberal price it now brings, to one possibly far below. And as they now stand, they are, by the difference of such premium, rateably a better security than United States stocks at present prices, and certainly better, if United States prices should fall as the consequence of an overstocked market. Of one thing we all may be sure, that if the war should close by a restoration of the Union, United States stocks would again be absorbed by foreign capital with greater confidence than ever.

It has been rumored that the approaching dividends payable to United States bond holders, were to be paid in currency, and that parties in New York have remonstrated with the Treasury Department for such intention. We imagine this is not entirely correct. The remonstrance may have been made, but we have no doubt the interest will be paid in gold as usual. It would certainly be a most unfortunate circumstance if the foreign holders should be compelled to lose 30 to 40 per cent, in the operation of remitting their dividends. It would be a violation of good faith, and a most impolitic act at a critical moment, when there is evidently a reaction abroad in our favor, and such influential men, and such distinguished public characters as Messrs Thompson and Foster, are actively and openly engaged in demonstrating before large audiences, the solid fabric on which rests our policy in the present unhappy struggle. What we should do is to place our financial system, strained as it must be by the enormous and unforeseen expenditures of an unexpected and gigantic struggle, on the best footing possible, remembering that negotiations in time of war are very different things from negotiations in time of peace, and that in all countries, those who hold the purse are particularly cautious how they let others put their hands in it. Patriotism implies self negation in an eminent degree, but capital has its own rules of procedure, and looks first to itself. We can imagine of what its mind is composed, when we see a victory or a repulse effecting even a half per cent. rise or fall in the value of its idol, Gold: how tears and wounds and blood are made a basis of calculation, and a profit in stock jobbing, and the permanency or downfall of our government, the problem, on the solution of which, fortunes are expected to be lost or won.

Such computations would seem almost impossible to a being of some other sphere than our own, but here we see them embodied and full of life; we may thrust our fingers into the holes of its personality. That Mr. Chase fully comprehends the vastness of his responsibility, the extent of its dangers, and the sensitiveness of the holders of property, we perfectly understand. No previous Secretary of the Treasury has ever had such a weight to carry, and it is truly wonderful that he has succeeded in repleting the national coffers, found ways and means to meet our enormous expenditure of money, and keep the bonds and loans of the country at the very high rates at which they are still held, high indeed when compared with the discount at which they formerly sold.

A cotemporary rather insidiously asserts, that the "Bank Presidents and bankers who hold the United States Sixes due at the close of the year, are very *patriotic*, in the offer to receive the amount in gold," and have petitioned the Secretary of the Treasury to that effect, "perhaps not very particular in mentioning in said petition, that large amounts have been bought by them lately, at 105a106, 25 per cent profit in six weeks, and this too in gold, a pretty fair operation."

We see no impropriety in this. Why the Banks

should not make a profit as well as the stock brokers is a strange idea, particularly as these very Institutions have stood by the Government in its greatest difficulties, loyally and courageous'y, and are constantly lending it gold at 4 per cent., which no other class of capitalists can be relied upon to do. Thus far, the Government has been able to get all the gold it needs in this way, and to deprive the Banks of a fairly earned profit, under such circumstances, would be breaking off the branch from which the golden fruit is gathered.

We quote sales of railroad and other securities as follows:

New York.—Brooklyn City Water Loan, 112½; Illinois conpon bonds, 1870, 104; Sixth Avenue R. R. 125¼; Indianapolis and Cincinnati 57; Norwich and Worcester, 72; Detroit, Monroe and Toledo 1st mort., 98; Illinois Central cancelled bond scrip, 60; Rome and Watertown, 80; Cumberland Coal pref., 13¾; Nicaraugua Transit, 5.

Baltimore.—Western Maryland bonds, 75¼; Baltimore and Cuba stock, 87½; N. W. Va., 1st mort., 101½; do., 2d mort., 97; Central Ohio 2d mort., 75; do., income bonds, 17; Springfield Mining Co., 3.30; Gardiner Hill, 115; Guilford, 50.

Pittsburgh and Steubenville Railroad.

In the general revival of projects for internal improvements, Pittsburg has almost fallen behind, but we are glad to observe, among our citizens, a growing disposition to recognize the importance of completing our Western connections, or at least the most practicable of them. There is one which can be finished at an early day, without any additional cost to our citizens, if they will but take sufficient interest in its successful termination. We refer to the Pittsburg and Steubenville Railroad, now in the hands of the Western Transportation Company. Work has recently been resumed with vigor on this end of the line. A large force of workmen is employed on the bridge at Steubenville, along the line of the road on the opposite side of the river, and in building the piers of the bridge over the Monongahela, above this city, upon which the road will come in by way of Try street. The Company desire to complete their connection with the East as soon as possible, and now only wait the permission of the city to enter upon and occupy the streets necessary to the termination of the enterprise. So soon as the authority asked for is obtained, they propose to employ a large additional force and push the work rapidly forward to completion.—*Pittsburgh Post Nov.* 29.

Atlantic and Great Western Railway.

This road was an admirable conception from the start, and it has been carried on thus far with unexampled success. It presents the singular anomaly of having been put in motion by Spanish capital, confidently advanced by intelligent bankers—the first time in the history of our railways that any such material support for our public works has come from Spain. In honor of one of these gentlemen, the point from which the line diverges from the Erie Railroad, is called Salamanca, and in excellent taste, suggestive of much that is famous in Spanish history, and full of memories to those familiar with Spanish literature. The new town which is to arise at this point is 405 miles west of the City of New York, and the proposed route is thence westward, through a country of great resources and power of development, to Dayton, Ohio, 60 miles east of Cincinnati, by which it will connect with St. Louis, forming in the whole a line of 1,200 miles, and thus earning its well adapted name of the "Atlantic and Great Western." The track throughout will be a continuous six feet gauge, and equal to every demand of the great traffic which it is to sustain. The combinations of interest by which the project has been carried on, and will be perfected, are these: first, of the Erie, which gives the right of way to Salamanca; second of lines in Pennsylvania; third of Ohio; and fourth of Missouri. From Salamanca, one hundred miles of the main track are opened to Meadville, Pa.; from Corry a branch traverses the oil region to Titusville; from Meadville another branch will shortly be in operation down the valley of French creek to the Alleghany river at Franklin, Venango Co., also rich in mineral oils. West of Meadville the work is pushed on across the Pennsylvania line to Warren and Akron, in Ohio. At the former a junction has been already effected with the Cleveland and Mahoning line, about 47 miles from Cleveland, thus uniting Cleveland and the city of New York by a direct line. We hear that a locomotive pioneer of the traffic has already arrived at the junction from the former city.

The entire length of the Atlantic and Great Western proper in divisions as follows:

From Salamanca to Ashville.....	48 Miles.
Pennsylvania division thence to Orangeville.	88 "
Ohio division thence to Dayton..... ...	242 "
	378

Of this distance 100 miles are open to Meadville, 100 miles more almost completed and ready for traffic, the line to Titusville and the oil regions in operation, and the branch to Franklin and the coal fields nearly finished. Thus of the 378 miles, 300 may be considered as completed. The capital already raised and applied, amounts to the moderate sum of £393,750, raised on what are called New York 1st mortgage 7 per cent bonds payable, 1880..... ....£225,000
And New York Shares..... 168,750

£393,750

So it would appear at first sight, that the road had so far cost only about £1,300 per mile. But this is explained by the fact that the contractors have accepted a class of second mortgage bonds in place of money, and thus financially the outlay of cash has been very inconsiderable.

The Company has been in a good position to make such an arrangement from the first, without the embarrassment of subsequent arrangements, compelled by unforeseen emergencies to make them at unfavorable moments, as so many other railway companies have been, being authorised to raise on

New York division 2d mortgage bonds..		£180,000
Pennsylvania " " " "		225,000
Ohio " " " "		450,000
		£855,000
And on Pennsylvania shares..	£450,000	
Ohio "	1,125,000	
		1,575,000
Total		£3,892,500

Thus then the company comes into the market with very remarkable advantage, in fact with a large portion of its road completed and in use, and proposes now to raise as contemplated originally £562,500, or about $2,500,000 on its first mortgage bonds secured on the Pennsylvania division. The *London Times* says:

"The bonds now offered are secured by a first registered mortgage, constituting a lien on the income and all corporate rights, privileges, lands, franchises, plant, and property of the Pennsylvania division of the railway, and guaranteed by the New York and Ohio divisions. The bonds, which bear 7 per cent interest, are redeemable at par within fifteen years in New York, or in London at 4s. 6d. per dollar, and are transferable without stamp or endorsement; 4 per cent. of the gross amount will be drawn yearly in January, commencing in 1864, to be paid off at par in London. Interest coupons are attached to the bonds, payable semi-annually, in April and October, at the banking house of Messrs. Heywood & Co., London, at the fixed rate of 4s. to the dollar. The price of issue is 70. By way of special security, it is explained that—

As provision for interest and sinking fund, the directors undertake to pay over to Messrs. Brown, Brothers & Co., bankers of New York, to be remitted to the trustees, in London, the first net receipts of the railway until a sufficient amount is accumulated for each half yearly payment; and for the same purpose of security for both dividend and sinking fund, the directors have also entered into an engagement to pay to Messrs. Brown, Brothers & Co., direct, the subsidy from the Erie Railway on the gross receipts from freight and passengers brought from the Atlantic and Great Western Railway.

The directors state their belief that 'by the creation of these trusts and by engaging to pay the coupons in London, at a fixed rate of 4s. to the dollar (or 14l. per annum on each bond of 1,000 dollars, or 225l.), they have provided for the bondholders a security as perfect as any railway in England or elsewhere can give.' The receipt of the bonus guaranteed by the Erie Company is alone estimated at more than sufficient to pay the interest on all the bonds. Amongst the other advantages are the fixed rate of exchange for redemption of principal, and of the interest warrants, both in London, and the fact that the road is made before these bonds are offered to the public."

It will thus be seen that these bonds are redeemable at par in New York; but there is the other arrangement of a peculiar and valuable

character. Four per cent of the gross amount to be drawn yearly in January is to be paid off at par in London, a new and important feature in American Railway securities.

The official announcement of the issue of these bonds does not state whether these annually drawn bonds are to be paid off at four shillings or four-and-sixpence per dollar; but as the final redemption at the expiration of fifteen years is to be at four-and-sixpence, we may assume that the annually drawn bonds will be paid off at the same rate. The redemption of 4 per cent. of the total amount annually would amount to 60 per cent. during the fifteen years, leaving only 40 per cent, to be redeemed at the expiration of that time; and this, according to our calculation, would reduce the average period for redemption of the whole, £562,500, to ten years and a-half instead of fifteen. In the present condition of the market for American securities these bonds can, of course, be only issued at a considerable discount, and, therefore, the period fixed for their redemption at par is an important element in their value. Supposing, for instance, that the bonds are issued at 75, or 25 per cent. discount, it will make a vast difference to the holder whether he receives his 25 per cent. discount in ten and a half or fifteen years. The receipt of £25 in ten and a-half years is at the rate of £2. 7s. 7d. per annum, while it is only £1. 13s. 4d. per annum when spread over fifteen years, a difference of nearly ¾ per cent. per annum.

Thus far, says the London *Times*, the Spanish capitalists and others interested profess themselves entirely satisfied with the spirit and manner in which every part of the undertaking has been carried out; and, in order to insure regularity of provision for the interest and sinking fund on the bonds issued in the London market, it is stipulated that the first earnings of each half-year, as well as the whole of the Erie bonus, are to be paid, until they reach the requisite amount, to Messrs. Brown, Brothers, and Co., of New York, to the credit of Messrs. Samuel Gurney, J. P. Kennard, and Charles Mozley, as trustees in England. The interest, which is to be at the rate of 14*l.* for each bond of 225*l.* is to be paid in sterling in London, and the sinking fund is to be of an amount that will cancel 4 per cent. of the bonds in London annually at par. The issuing price is to be 70, and the legal contracts in connexion with the arrangements have been superintended by Messrs. Freshfields.

We may now perceive that the financial management has been admirable, and the present effort for the negotiation is almost certain to succeed. If the opinion of the AMERICAN RAILROAD JOURNAL is of any value, it is given fully, freely and confidently in favor of this great work, and we are glad to see that our English cotemporaries, such as the *Money Market Review* and *Herepath*, have so thoroughly a comprehension of its character and prospective advantages.

Thus the greatest part if not the whole of the mineral oil of Pennsylvania will be transported over this road, hitherto carted generally for several miles, at an enormous expense to the canal five miles from Meadville. The trade of Cleveland is also to be diverted largely by the junction of the Cleveland and Mahoning line, about 47 miles of way, so that cars will be able to run the whole distance from Cleveland to New York.

At Akron, in Ohio, 126 miles from the junction of the Atlantic and Great Western with the Erie, will be the centre of a great wheat and cattle region, and the point of transhipment from the Ohio Canal by which 40 miles of round about water communication will be saved. Again at Mansfield, sixty-five miles from Akron, a connexion is secured with the Pittsburgh, Fort Wayne and Chicago Railroad, forming the quickest route with only one change between New York and Chicago, and so at Gallion fourteen miles further west with the Bellefontaine and Indiana, and the Cleveland, Columbus and Cincinnati, both important lines and thus unavoidably becoming feeders of the Atlantic and Great Western. In its continuation at Dayton it joins the Cincinnati Hamilton and Dayton line which is to widen its gauge and unite. Indeed after passing the meridian of Cleveland, it cuts at various angles more than a dozen great lines of railways tending Northwardly and Southwardly, offering them the easiest grades and most direct routes to New York. The Erie Road has something of this character but not to any such extent.

All this country through which it passes is populous and fertile, rich in the products of the fields, the forests, and mines, and there cannot be a doubt that it will be a splendid success to the stockholders, and of vast benefit to our country. The traffic already for a distance of sixty miles between Salamanca and Corry is thus tabulated.

1862.	Passengers, &c.	Freight.	Total.
January	$2,195	$14,630	$16,825
February	1,939	12,472	13,411
March	2,356	13,402	15,758
April	2,544	7,850	10,394
May	2 514	7,725	10,239
June	2,856	8,071	10,927
July	3,327	6,980	10,307
August	5,138	10,171	15,309
September	8,510	21,529	30,039
October	8,778	20,960	29,738
Total	$40,157	$122,790	162,947

Computing the number of weeks to be 38, this traffic receipt would be at the rate of £965 per week, or £16 per mile per week—no great result if it is to be regarded as any indication of future revenue; but our experience of these matters, and of the gradual but sure increase of the traffic of railways, induces us to attach small importance to the undeveloped traffic of the isolated section of any railway a few months in operation. The large increase in the September traffic receipt is the result, it appears, of the partial opening of the Titusville branch to the oil districts, which has since that been completed. This beginning of the oil traffic augurs well for the future.

Some estimate of the future traffic receipts of the Atlantic and Great Western Railway may be formed from the facts that the receipts of the Erie line, into which the Atlantic and Great Western runs at its eastern end, are at the rate of £65 per mile per week; and that those of the Cincinnati, Hamilton, and Dayton, into which it runs, at its western end, are £48 per mile per week. Moreover, the receipts of the Lake Shore Railway, which runs parallel with the Atlantic and Great Western, but some 30 to 40 miles further north, and close to the shore of Lake Erie, are at the rate of £52 per mile per week. Upon these facts it may be fairly assumed that on the completion of this line and the full development of the traffic the mileage receipts per week will not be less than £50. This on the 378 miles would give a gross annual revenue of £982,800.

Estimated gross traffic receipt, at £50 per mile per week, on 378 miles of railway		£982,800
Less 60 per cent. on receipts for working expenses		589,680
Estimated net earnings		£393,120
First mortgage bonds, viz :—		
New York 7 percent., already issued	£225,000	
Pennsylvania 7 per ct., now to be issued	562,500	
Ohio, say 7 per cent., not issued	900,000	
Total	£1,687,500—p. ct.	118,125
Surplus after payment of first mortgage		£274,995
Second mortgage bonds, £855,000, say at 8 per cent		68,400
Surplus for dividend on shares		£206,595

Since writing the above we learn that the price at which these bonds are to be offered to the public is 70 per cent., or 30 per cent. discount, and it follows that, taking the period of redemption at ten and a half years, they will pay the investor about twelve per cent. at that price.

We are glad to place this important record in the columns of the JOURNAL, and shall watch the certain triumph of this noble work, with the greatest interest.

Kitchen Ranges and Gas Consuming Stoves.

The high price of fuel naturally induces attempts at economy in its consumption, and American ingenuity is ever on the alert to meet this requirement. From actual experience, we are inclined to speak *warmly* in favor of at least two kinds of stoves and kitchen ranges, the manufacture of our friends, SANFORD, TRUSLOW & Co., 239 and 241 Water street. The latter is styled the "Challenge," with commendable boldness, since it heats the largest ovens with the smallest fire box, doing its work quickly and evenly, the latter a great desideratum as every housekeeper knows. It has also the advantage, by means of various sized grates, of doing a large or small amount of work as the case may be. A water back is furnished with the necessary pipes, to fill a boiler, and roasting and boiling are effected with certainty and economy. It is air tight, and yet furnished with valves to obtain any amount of draught required, and is a neat and finished article.

The stove (Cosmopolitan) is for parlors or bedrooms, and is so arranged that while the fire is rapidly ignited, the draught can be regulated at pleasure, or cut off entirely, the gas being consumed in the process. A fire may be kept up a whole winter without difficulty by a very moderate use of fuel, and at the same time the accumulation of bad air from the room where it is used, is carried off by a circular valve in the collar. It is an ornamental piece of furniture, and easily taken care of. We recommend it to all those who wish to combine comfort with economy.

Large Capital.

The Great Western Railway, (Eng.) is about amalgamating with two other Companies, when the whole Capital will be $210,000,000, twice as much as is wanted to construct the Pacific Railroad.

Railroads in New Jersey.

We learn that a branch line from the Camden and Atlantic railroad to May's Landing is already graded and will be pushed to completion without delay. The West Jersey line to Cape May is also going steadily forward, and gives promise of completion by midsummer, the time agreed upon. A new line connecting the Erie road with Sussex county, N. J., is in a forward state. Numerous applications for extensions are to be made at the ensuing session of the legislature; one, of the Freehold and Jamesburg road to Tom's River village, in Ocean county.

Atlantic and Great Western Railroad.

Prof. Hammett, of Meadville College, says: The road from Meadville eastwardly is now in running order. Large quantites of rails have been delivered at West Greenville, Mercer county, and tracklaying has commenced east and west from that point. At Warren, Ohio, and Akron, Ohio, rails are collected and tracklayers are busy pushing the work east and west. It is believed that the road will be completed through to Akron by Christmas, or by the first of January at the furthest. A very large depot is being built at Meadville—327 feet long by 130 feet wide, which indicates the intention to make that a point of considerable importance.

Inter-Colonial Railway.

All the delegates from the British and North America, including Mr. Sicotte, Premier, and Mr. Howland, Minister of Finance of Canada now being in London, it is understood the necessary arrangements for the construction of the Inter-Colonial Railway will be immediately concluded with the Imperial Government.

The Franklin Railroad.

The entire grading of the Franklin Branch of the A. & G. W. R. R., will be done by the end of this month, if the weather is at all propitious. The A. & G. W. telegraph line to Franklin will be completed this week. Whatever may be said about the managers of the Great Western road, we must confess that they display extraordinary energy in all their movements.—*Meadville Republican.*

Smyrna and Aidin Railroad.

This road is now carrying large quantities of figs, the camel transportation of this article being given up. Shooting and excursion parties are also patronising this Turkish road.

Bay de Noquet to Menomonee.

Working parties are already on the route, we understand, from Bay de Noquet to Menomonee, cutting out a stage road. This will be a continuation of that from Marquette to Bay de Noquet, to be used as a winter route. Mr. Harvey, to whose energy and perseverance the people of this region owe much, is at the head of this enterprise,—*Green Bay Adv.*

☞ The Governmental three per cent. tax on passenger receipts of the Boston and Lowell, Nashua and Lowell and other railroads consolidated under the management of Gen. George Stark, amounted to seven hundred dollars and nine cents in September. For October to eight hundred sixty seven dollars sixty three cents.

Camden and Amboy Railroad.

The Camden and Amboy Railroad Company are constructing a double track between Bordentown and Camden. The work has been commenced on both ends, and a considerable distance has already been graded, and from Camden the new track has been laid for some distance. It is expected that the work will be rapidly pushed to completion.—*Bordentown Register.*

United States Agricultural Bureau.

We notice with regret, that a resolution has been introduced into the House of Representatives, by Mr. Lane of Indiana, inquiring into the expediency of abolishing the Agricultural Bureau.

We hope this movement will not be successful. Even if it were expedient at any other time it is not so now. The Agricultural interest lies at the bottom of the whole recuperative power of this country. It is the main spring of commerce and the resource of taxation, when other interests diminish. The Commissioner, Mr. Newton, has shown himself to possess grasp of mind, and executive ability. Should he succeed in some of his plans, among which we may mention, that of inducing the friendly States of Columbia to enter into the cultivation of cotton, to meet the demand for which the condition of the Southern States will be inadequate for years to come, he will have performed a service, which cannot be too highly appreciated. So, too, in seeking plants with the proper fibre for the manufacture of paper, and communicating the results of his inquiry, he will have conferred a great benefit on the country. We hope he will be left to pursue his researches, and effect his valuable exchanges without interference.

Financial Plain of the New Jersey Joint Companies.

To the holders of the loans of the Delaware and Raritan Canal and Camden and Amboy railroad companies, falling due in 1863 and 1864:

The companies propose to issue a consolidated loan of five million of dollars ($5,000,000) to take place of their loans falling due in 1863, 1864, 1867, and 1870, and of the unissued part of the loan of 1889.

It will be payable November 1, 1889, with six per cent. interest, payable 1st of May and November, with coupons attached. There will be one thousand eight hundred bonds of $1,000 and two thousand of $100. The latter will enable persons of moderate means to make a perfectly safe and convenient investment.

Each bond is made payable to the original purchaser, transferable on the books of the companies, either to a specified person or to bearer, and by any future bearer to any specified person. The safety of a registered loan will thus be combined with the convenience of ordinary coupon bonds.

The loan is secured by mortgage on all the works of the companies, executed to John Welsh, of Philadelphia, and Alexander Wurts, of New Jersey, trustees. A copy of the bond and mortgage can be seen at the office of the companies, foot of Walnut street, Philadelphia.

It is provided in the mortgage that no bond shall be issued, except upon cancellation of the like amount of bonds of some of the loans above mentioned.

It is also provided in the mortgage that the English debt of about $2,000,000, now in the course of liquidation by a sinking fund, shall be completely paid off by the year 1880, when this mortgage will become the first lien on property which now yields annually a net income of a quarter of the whole amount of the mortgage.

The companies are about to complete the direct double track road between Trenton and New Brunswick, and to add additional tracks and improvements, which will greatly increase the value of the property on which the loan is secured.

The companies are prepared to negotiate for the exchange of the bonds of the consolidated loan for those falling due in 1863 and 1864, or the purchase of the latter. The terms will be made known on application to Mr. Gatzmer, at their office above mentioned.

ASHBEL WELCH,
RICHARD STOCKTON, } Committee.

Railroad Earnings--Weekly.

The traffic of the Great Western Railway of Canada for the week ending Dec. 5, 1862, was as follows:

Passengers	$19,968 42
Freight and live stock	41,076 51
Mails and sundries	1,605 92
	$62,650 85
Corresponding week of last year	51,470 21
Increase	$11,180 64

The earnings of the Chicago and Alton Railroad for the first week in December were:

	1862.	1861.
Passengers	$8,752 40	$5,614 55
Freights	16,596 85	11,553 00
Sundries	874 33	815 33
Total	$26,223 58	$17,982 88
Increase in 1862	8,240 70	
Total since Jan. 1	$1,134,389 40	$1,036,151 35

The earnings of the Toledo and Wabash railroad in the 1st week of Dec., 1862, were ... $28,715 83
Do., 1861 ... 22,541 53
Increase ... $6,174 30

The earnings of the Milwaukee and Prairie du Chien Railroad for the 1st week in December, 1862, were ... $16,249 18
Do., 1861 ... 18,628 80
Decrease ... $2,379 62

The Galena and Chicago Railroad earned the 1st week in December, 1862 ... $33,284 73
Do., 1861 ... 25,117 86
Increase ... $8,166 87

The Michigan Southern Railroad earned for the 1st week of December, 1862 ... $67,828 00
Do., 1861 ... 44,132 00
Increase ... $23,696 00

The Chicago and Northwestern Railroad earned in the 1st week of December, 1862 ... $22,077 17
Corresponding period, 1861 ... 13,617 03
Increase ... $8,460 14

The Cleveland and Toledo shows an increase of $11,000, and the Rock Island an increase of $11,500.

The Michigan Central shows an increase of $19,000 on the 1st week of December.

The receipts of the Grand Trunk Railway of Canada for the week ending December 6, 1862, were:

Passengers	$20,594 77
Mails and sundries	4,106 10
Freight and live stock	80,205 60
Total	$104,906 47
Corresponding week of last year	98,105 34
Increase	$6,801 13

Raritan and Delaware Bay Railroad.

"The Delaware Bay Railroad across New Jersey, after having advertised to carry through passengers from Philadephia to New York—contrary to the express decision of the Chancellor—and after having carried about thirty thousand passengers, has withdrawn its advertisement from the papers, and we are informed that 'the track has been found to be so hastily laid that it is impracticable to continue the through passenger business.'" The *Democrat* adds that, "except as a summer road to accomodate our Atlantic water places, the new route must prove a failure."— *Camden (N.J.) Dem.*

Agricultural Department Washington.

The commissioner Mr. Newton has received from Dr. A. R. A. Von Welsbach, Director of the Imperial Printing establishment in Vienna, a number of specimens of paper, manufactured from the husks of Indian corn. Also specimens of yarn, linen cloth, &c., made out of the same material; also specimens of maize flour (the only nutritive substance of the corn-shucks) obtained from the *mass*. The paper has the appearance (and apparently the durability) of parchment, and for printing purposes is excellent, as is shown by some of the samples which have been thus used—the impression of the type being a great deal clearer than on paper manufactured from cotton rags. The most remarkable thing in regard to the process of its manufacture is simplicity. The humblest laborer can learn the process of manufacture after an hour's instruction, and is enabled to effect the production of any of the above-named articles in the corn-field itself, without the slightest expense.

This is one of the good results of this department, and there is no doubt, the saving to be made in the manufacture of paper alone, by its means will more than compensate the country for the expenses occurring in conducting it, were it even ten times as expensive as it is. The truth is, the commissioner has not means enough at his disposal to do all the good he might do.

Baltimore and Ohio Railroad.

At a meeting of the Board of Directors of this company held in Baltimore on the 10th inst., John W. Garrett, Esq., was re-elected President for the ensuing year. Upon resuming the chair, which he had vacated pending the election, Mr. Garrett spoke as follows:

Gentlemen:—Your committee has informed me that you have again honored me by a re-election to the Presidency of this Company, by a nearly unanimous vote.

In the terrible crisis through which the country is passing, no interest have been more affected, none have suffered more severely, than those of the Baltimore and Ohio Railroad. That results relatively satisfactory have been accomplished by those charged with the administration of the affairs of the Company is largely due to the harmony that has marked your proceedings, and to your earnest and cordial co-operative action. Whilst, therefore, possessing full knowledge of the ardous duties, of the grave and varied complication, and incessant efforts and toil now connected with the position of your Executive, I again accept it, relying upon the continuance of that uniform and cordial co-operation which has heretofore distinguished our relations, and with the confident hope that under your auspices, and laboring together zealously for the common object, we may be enabled to serve effectively the great interests of our people, which are so vitally and indissolubly associated with this work, with the management of which we are entrusted.

There were present twenty-two members of the Stockholders direction recently unanimously elected, viz: John Hopkins, J. Spear Nicholas, Samuel W. Smith, Francis Burns, Wm. W. Taylor, James Harvey, Galloway Cheston, William A. Hack, C. Oliver O'Donnell, John Gregg, William Heald, Samuel Kirby; and of the State direction, viz William A. Beall, George R. Dennis, Chapman Harwood, Reverdy Johnson, John K. Calwell, Wm. F. Smythe, James W. Tyson, Peter W. Crain Samuel Wilhelm, Brantz Mayer—recently appointed by the unanimous action of the Board of Public Works.

Western (Mass.) Railroads.

We learn that this company have under consideration the subject of extending its road from Worcester to Boston, and that notice of application to the next legislature for an alteration or extension of its charter, for this purpose, has already been given. The present line of the Western road extends from Worcester to Albany, a distance of over a hundred and fifty miles, and what the corporation will ask from the Legislature is authority to construct an extension of its road from some point in the line of its present location running in a northerly direction either through the city of Worcester, the towns of Shrewsbury, Boylston, and Northboro', in the county of Worcester, the towns of Marlboro', Sudbury, Wayland, Weston, Lincoln, Waltham, Watertown, Belmont, West Cambridge, Somerville, and the cities of Cambridge and Charlestown, in the county of Middlesex, or through a portion of the said towns and Millbury, Grafton, Westboro', Southboro', in said county of Worcester, and Farmingham, in the county of Middlesex, to the city of Boston, with the power to enter upon and connect with any existing railroad terminating in Boston, and subject to the consent of the stockholders of this and such other corporation, to consolidate and make joint stock with such corporation whose road so terminates in Boston, or to lease the same, and such further privileges and powers as may be necessary and proper for the accomplishment of the proposed extension or consolidation.

Norwich and Worcester Railroad.

The Norwich and Worcester Railroad will soon be connected with the Western Railroad, by a branch running from Webster, Mass., through Southbridge to Palmer, thus increasing the business of the Norwich Road, and proving of great benefit to the town of Southbridge, the locality of the Hamilton Mills.

BOUGHT AND SOLD ON COMMISSION.

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES" because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000 and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

FISK & HATCH,
BANKERS,
AND DEALERS IN
ALL ISSUES OF GOVERNMENT
AND OTHER
FIRST CLASS SECURITIES,
38 Wall st., N. Y.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK.

HAVE on hand for immediate delivery, the NEW TWENTY-YEAR SIX PER CENT. BONDS of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of
$50, $100, $500 and $1,000.

The Registered Bonds in sums of
$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m5

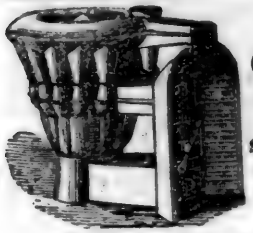
TESTIMONIALS.
HUDSON RIVER RAILROAD OFFICE, N. Y.
This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.
J. M. HEBARD, Supply Agent.
UNION FERRY COMPANY.
The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.
MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,



Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.
Fire may be kept all winter with an astonishingly small supply of coal.
Send for description and testimonials.
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.

Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

Is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting or heating irons at the end. It is very economical of fuel. For a FEW DOLLARS a family may be supplied with a PERFECT COOKING APPARATUS, equal to the highest priced stove in the market.
Three sizes, adapted to coal, or wood.
SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.

American Railroad Journal.

New York, Saturday, December 27, 1862.

The Panama Railway.—Its Relations with Colombia.

This Railway, besides being a noble monument of the skill and perseverance of the North Americans, is justly one of the most remunerative on the face of the globe. Its stock bears a high value, its capital, so far as the amount of interest determines the amount of capital, is 500 per cent. on the original sum. It has other remarkable and anomalous characteristics. It is the only railway which unites two great Oceans, which divides or collimates two great continents, and the only one in which all maritime nations are alike interested. A company controlling such a property should be statesmen as well as men of business. For the day is not distant, when the present grant of the franchise now enjoyed by them will terminate by its own limitation. In twelve years' time, the Government of Colombia, succeeding to the status and political power of New Grenada, may by refunding the cost of th construction of this railway, repossess the right of way and all the improvements which have followed the original grant. Nor will the company be any losers by this lapse of their grant into the hands of the grantors, for they will have received back their original investment, with interest many times over. On the other hand, the resumption of the franchise by the Colombian Government, will be of vast benefit to it, in every possible form, furnishing revenues adequate to its support, enabling it to pay off its foreign debt, to hold foreign customers amenable for the infractions of comity and treaties, and to place itself on the footing of a permanent and more independent nation.

The Directors of the Panama Railway Company have been shrewd enough to perceive, that a renewal of their franchise is of the utmost importance to their stockholders. For them there is no such other property to be found in the world, there is no other security like it. They have therefore made one pretty strong effort to obtain a renewal after the expiration of the present term and according to the general understanding of the subject, offered the late government of Ospina, which was the church party and anti-progress in its character, one million of dollars, and one dollar per head on each passenger carried over the road. The Government of that day, was shrewd as well as illiberal, and declined the offer, for it is well understood abroad by the New Grenadian bondholders, that in some way or other, and some how or other, they are to get their money "by way of the isthmus." This idea was put forth in an English work. "Fenn on the Funds" as long ago as 1857, and is still more prevalent now, when the Panama Railway may in a few years revert to the Colombian Government.

It becomes then a very grave question, not merely for this company, but this Country, what are the probabilities in this matter, and how shall the influence and control of the American Company be perpetuated. For it must be remembered this influence and control give this country a decided advantage over those European powers, who are obliged to use this traffic route, and who would like above all things to possess it exclusively. Such a result would be very damaging to American interests, and it is the part of wisdom to endeavor to prevent it.

Fortunately for the United States, and the interests of freedom in this Western hemisphere, the President of Colombia is a man of very great ability, and as honest and pure minded as he is able. He has already indicated his wish for a general alliance under the wings of the American Eagle against the reactionary spirit of Europe, threatening the American republics with intervention if not destruction. The movements of France in Mexico and the threats of Spain against Peru seem to justify his apprehensions. His sympathies, his education, his personal observation, his residence among us, his admiration of our institutions and progress, all make him our warm friend. He has borne the neglect of our present administration without complaint. Neglected, deprived of even the common and uncommitting recognition of his commercial agents for more than a year since his government was established, though not asking for a diplomatic recognition until events should make that act a safe one on our part, he still seeks our friendship, desires the increase of our mutual commerce, offers inducements to our emigrants, and assures us of his political sympathy.

Now then is the time for the Panama Company to come forward and renew their grant, and if they have hitherto appeared to lean to the party of the church against the liberals and constitutionalists, if they have paid over to the rebel representatives any portion of the money due the Government de facto, and thus helped in keeping up their opposition, nevertheless their shortsightedness will be overlooked, when they come up fairly to the point of a straight and square negotiation.

In this view of the subject the financial position of Colombia assumes new importance.

The present foreign debt is a part of the debt of the old organization of Colombia contracted in England in 1822-24 and afterwards when a separation of Ecuador and Venezuela took place, the debt then due, was divided and apportioned to those states and New Granada and 50 per cent, or half of the amount viz. £3,812,975 was assumed by New Granada and so also half the interest. Without going into a description of the forms of the securities we may briefly say that after 16 years the interest was to be increased ½ per cent per annum, and the bonds were to be received at par in the purchase of national property. The net

revenue from the sale of tobacco, and ⅙ the proceeds of the customs were hypothecated for the payment of the interest, yet the act so hypothecating these securities was repealed by former administrations and the dividends from 1850 to 1857 were never paid.

The following is a statement of the existing debt of New Grenada, assumed by the new organization.

"The debt of New Grenada consists of 777,471*l.* new bonds, bearing 2 per cent. annual interest until 1866, and 3 per cent. thereafter; £3,256,425. Active Stock, ex over-due coupons and hectares, bearing a *minimum* interest of 10s. 3d. per cent. per annum until 1866, and a *minimum* interest of 15s. 4½d. after 1866; and 3,312,975*l.* Deferred Stock, bearing a *minimum* interest of 2s. 6d. per cent. per annum, with a gradual increase to a *maximum* of 1½ per cent.

"The sum of 40,000*l.* after deducting therefrom 10 per cent. for the redemption of the Active and Deferred Stock, suffices to provide the present yearly *minimum*. The sum of 60,000*l.* after deducting therefrom 10 per cent. for the redemption of the Active and Deferred Stock, suffices to provide for the yearly *minimum* to be paid after 1866.

"25 per cent. of the Customs revenue is assigned and specially hypothecated to the bondholders up to 1866, and 37½ per cent. of that revenue after 1866, until they shall produce 3 per cent. per annum on the Active and 1½ per cent. on the Deferred Stock. Any excess over these rates is to be applied to the redemption of the debt. Should the Customs duties assigned during any year produce less than the respective *minimum* of 40,000*l.* and 60,000*l.*, the deficiency is to be supplied from other resources of the country.

"In ordinary and peaceful times the Customs revenues have produced a total sufficient to pay double the amount of the *minimum* now guaranteed.

"President Mosquera having been victorious in Antiochia, the last of the dissenting States, his authority is now established throughout the whole extent of the Republic. He is very anxious to liquidate the foreign debt as speedily as possible, and besides devoting, according to the recent agreement with the bondholders, the Government portion of the receipts of the Panama Railway to the redemption of the debt, he has resolved to avail himself of the present low price of the stock, and to apply a part of the proceeds of the secularized church property to the purchase of the foreign bonds in the market.

"A new and most important principle was introduced at the late conversion of this debt. The old bonds have been retained, and the new agreement printed thereon contains the proviso that, in the event of four consecutive coupons remaining unpaid, the Government becom[illegible] again liable for the original amount of interest—namely, 6 per cent. per annum on the Active, and 3 per cent on the Deferred Stock.

"Thus if the Government fail to provide the *minimum* of 40,000*l.* till 1866, and of 60,000*l.* after that date, they become again indebted to the bondholders for 300,000*l.* per annum. This amounts to a yearly penalty of 240,000*l.* for non-payment of the guaranteed *minimum*.

"The large and populous State of Antiochia has been shut out for nearly two years from all external communication, which was one of the chief causes of the falling off in the Customs receipts. During that period every article of foreign manufacture has been exhausted; the inhabitants were compelled to part even with their blankets and bedding to supply clothing for the army. A considerable quantity of foreign goods will now be poured into that wealthy State, whereby the Customs duties will be swollen to such an extent as to produce at least 1 per cent. on the Active Stock for the next year.

"In compensation for the immense reduction of interest recently agreed to by the bondholders, they obtained a grant of 4,500,000 acres of land, and a committee has been appointed for the purpose of making them available by the instrumentality of a company, with a *minimum* capital of 100,000*l.* The Government, with a view of introducing European emigrants and developing the varied and rich resources of the country, has consented to make a free gift of 100,000*l.* in 3 per cent. bonds to that company when constituted. At the same time, concessions for three roads, with a *minimum* guarantee of 6 per cent., have been granted to this company—namely, from the Magdalena to Bogota; from the Magdalena to Santander; and from Buena Ventura, on the Pacific, to the Valley of the Cauca.

"The successful operations of such a company would so rapidly increase the revenue as to produce, at no very distant date, the *maximum* of 3 per cent. on the Deferred Stock."

Ever since President Mosquera has held the reins, he has strained every nerve to restore the credit of his country, and has scrupulously remitted all the funds which have been available under the existing conventions, to meet the payment of interest abroad. In order to do his utmost for the payment of the debt, he has created a system of land warrants, and every bondholder of £100 of the old active debt became entitled to thirty hectares of land, equal to 70 acres English, and every bondholder of the deferred to sixteen hectares or forty acres. These lands are situated in the rich State of Antioquia, Tolima, Magdalena, Cauca, Boyaca, Bolivar, Condinamarca, Santanda and Panama. These hectares are sold in the London market at from $15 to $20 per 100 hectares, or about 250 acres, equal to a valuation of from 6 to 8 cents per acre. In these States, gold, cotton, tobacco of the best quality, sugar, maize, rice, coffee, cocoa in immense quantities, quinine, bark, &c., are found, and the emerald mines of Muzo, and the pearl fisheries are famous. The tobacco lands of Ambalema, are held at a very high price per acre.

An English company is being organized to effect settlements on these lands, and President Mosquera has offered it a monetary support, and secured it legislative privileges.

It is time then that the Panama Company as well as our own Government were busy, if they mean to keep up the five millions of imports and exports we now control. It is also desirable that the concession to the Panama Company should be extended, and that some liberal offer should be made to secure it. The old New Grenadian Two per cents are now rising in the London market, the last quotations being 28½. Over due old coupons are called at 12¼. The Panama Company should move at once so as to enable the Government to retire at least a portion of its 2 and 3 per cent bonds while they are to be obtained at this low figure.

Indeed by judicious negotiation the Company might renew its life for fifty years. The Colombian debt could be reduced one half, and the residue be replaced at a low interest, with a certainty of redemption. Our interests on the isthmus would be secured and perpetuated, and our trade in South America largely promoted.

If these suggestions are not taken in the friendly spirit with which they are given, then we will add another, and in conclusion. There will be found capitalists who to obtain the reversion of the franchise at the end of the twelve years when the railway will be at the disposal of the Colombian Government, will not hesitate to make liberal offers for it, with immediate advances. Beyond all question, this property will be then worth to the holders thirty millions of dollars more than it cost, and twelve years are not very long in the life of men or nations, to wait for such a prize.

Michigan Central Railroad.

Annexed is a statement of the financial condition of the Michigan Central Railroad on the 1st Dec. inst.

Income Account.	Dr.
Dec. 1, 1862—To balance of this account, per Treasurer's Report of June 1, 1862	$312,193 78
To receipts of road from June 1, 1862, to Dec. 1, 1862	1,347,036 46
Total	$1,659,230 24
To balance Income Account this day.	$511,248 07
	Cr.
By dividend of 3 per cent., July 1, 1862	$181,713 00
By Annual Payments toward Sinking Funds	84,500 00
By Operating Account, exclusive of interest and exchange, from June 1, 1862, to Dec. 1, 1862 $591,264 42	
By Interest and Exchange Account from June 1, 1862, to Dec. 1, 1862 290,504 75	
	881,769 17
By balance to new account	511,248 07
Total	$1,659,230 24

The foregoing account shows the net receipts of the road for six months ending 1st inst., after deducting operating, interest, and exchange accounts, but excluding the amount paid to the Sinking Funds, to be $465,267 29. After deducting the amount paid to Sinking Funds, the balance is $380,767 29. Adding the balance to credit of this account June 1, $312,193 78, less the July dividend, $181,713, the amount to credit of Income Account is $511,248 07

Deduct dividend of 5 per cent, declared this day 302,860 00

Leaves a balance to Income Account of $208,388 07

The Company is free from floating debt.

The sum invested in the Sinking Funds amounts to $150,057, all bearing interest at the rate of 8 per cent per annum.

Grand Trunk Railway.

At a meeting of the Grand Trunk Railway Board, lately held in London, the re-organization of the Company as suggested in Mr. Watkin's report was carried unanimously. The new board is to be constituted as follows:—President, Edmond Watkin; London Directors—Thomas Baring, Henry Wallaston Blake, William Chapman, Kirkman Hodgson and Richard Potter. Canadian Directors—Mr. Bridges, Mr. Castler, Mr. Ferrier and Mr. Moulston. The political connections of the Company are thus entirely severed, and it is believed that there will be no further ground of complaint on that score. The new Directors—who do not come into office until next April—are empowered to enter into arrangements with the St. Lawrence Dock and Wharfage Company for the partition of the property of that company at Point Levi, between the Grand Trunk and the St. Lawrence Dock Company; deeds were sanctioned for reducing the Atlantic and St. Lawaence rent (to its ordinary proprietors) from 6 to minimum of 4 per cent., and the Detroit and Sarnia from 8 to 4. Mr.

Watkin appears to have spoken at great length and very eloquently upon the affairs of the company.

Milwaukee and Chicago Railroad.

We understand that the Milwaukee and Chicago Railway Company have completed a reorganization of the finances of the road. The floating debt has been satisfied by an issue of 7 per cent. Income Bonds, and the property, held for some time by Messrs. Bishop & Co., surrendered to the Company, now directed by Mr. F. Schuchardt, of Schuchardt & Gebhard, Mr. Edward Weston, of Weston, Dortic & Co., Mr. C. L. Frost, Mr. F. A. Rusch, and Mr. Benjamin Price, all of this city. The original mortgage liens upon the road, second in preference to the present income issue of bonds, are not disturbed by this arrangement. The prompt payment of interest upon these mortgages is secured by it.

Valuation of Property in Illinois.

The following interesting figures are from the Auditor's forthcoming Report:

	1860, Number.	1861.
Horses	590,963	625,242
Neat cattle	1,425,978	1,428,362

Other field products	1,084,679	1,086,673

The following exhibits the value of property in the State for a series of years, the rate of taxation and the gross amount of State tax:

Year.	Total value of property.	Rate of tax, mills.	State tax.
1839	$58,889,525	2	$117,770 05
1840	58,752,168	2	117,821 28
1841	70,156,053	3	210,498 10
1842	72,605,424	1½	108,908 08
1843	72,416,800	2	144,833 60
1844	75,767,765	2	151,495 53
1845	82,327,105	3	246,981 22
1846	88,815,403 43	3½	311,118 00
1847	92,206,493 96	3.7	339,779 53
1848	102,132,193 97	3.7	370,232 01
1849	105,132,193 97	5.8	612,428 10
1850	119,868,336 37	5.8	702,076 17
1851	137,818,079 30	6.0⅓	834,495 60
1852	149,294,805	6	909,472 87
1853	225,156,622	4.9⅓	1,116,993 37
1854	252,756,568	4.9⅓	1,279,089 87
1855	334,398,425	6.7	2,260,904 90
1856	349,951,272	6.7	2,368,741 81
1857	407,477,367	6.7	2,750,346 01
1858	403,140,321	6.7	2,739,429 90
1859	366,702,053	6.7	2,528,992 11
1860	367,227,742	6.7	2,460,425 55
1861	330,823,479	4.5	1,488,705 65

From 1825 to 1860, inclusive, the rate of taxation remained at 6.7 mills on the dollar. In 1851, the revenue tax was 5 cents on the $100; the school and interest tax 20 cents each on the $100, being a total of 45 cents on the $100.

The valuation of property has been greatly reduced, year after year, by the assessors, until at the present time, as will be seen by the appended table, it is most ridiculously low:

	Average value. 1860.	1861.
Horses	$37 84	$33 69
Neat cattle	8 74	8 05
Mules and asses	50 82	43 50
Sheep	1 19	1 02
Hogs	1 79	1 84
Carriages and wagons	23 92	23 22
Clocks and watches	4 91	4 22
Pianos	94 43	71 73

In 1859, pianos were valued at $133. In 1861, they are only worth on an average $71 73! The valuation differs in different counties, which might be avoided.

The following table exhibits the value of personal property, town lots, lands and railroads for a series of years:

	Personal.	Town lots.
1856	$104,108,235	$44,776,557
1857	111,813,908	44,398,686
1858	97,853,641	46,183,564
1859	88,288,094	70,676,364
1860	88,884,115	76,971,868
1861	80,720,918	41,454,142

	Lands.	Railroads.	Totals.
1856	$168,974,270	$6,639,220	$349,956,272
1857	201,693,234	7,529,703	403,140,321
1858	249,971,641	9,131,475	407,477,367
1859	194,177,198	11,758,695	366,702,053
1860	189,286,287	12,085,472	367,227,742
1861	197,404,697	11,243,722	330,823,479

United States Coast Survey.

The Superintendent of the Coast Survey has submitted to the Treasury department his estimates for the coming year, from which we gather the following particulars: The amount is but little more than half that of 1860-'61, and is much diminished from that of 1861-'62. For general expenses he will want $19,000; for field work along the coasts of Maine, New Hampshire, Massachusetts and Rhode Island, $61,000; for the same along Connecticut, New York, New Jersey, Pennsylvania and Delaware, $17,500; for parts of Maryland and Virginia, $13,500; for part of Virginia and North Carolina, $15,000; for the Carolinas and Georgia, $16,000; and for the Gulf States, $36,000—making a total of $178,000, which, by certain other necessities, will be increased to $300,000.

The Certifying of Checks by Bank Presidents.—Nature of the Agency.

AN AGENT HAVING AN ADVERSE INTEREST IN HIMSELF, CANNOT IN GENERAL, BIND HIS PRINCIPAL. AN EXCEPTION, HOWEVER, EXISTS IN FAVOR OF HOLDERS OF NEGOTIABLE PAPER WHO ACQUIRE IT IN GOOD FAITH, BEFORE DUE, FOR VALUE.

The following action was brought by the holders of three several checks against the Farmers and Citizens Bank of Long Island. The complaint alleged that these checks were drawn, and came into the plaintiffs' possession under the following circumstances.

At the date of these sections one Charles W. Houghton was president of the defendant's corporation, and as such had power and authority to accept drafts and certify checks drawn upon the bank. On or about the 31st of December, 1853, one Thomas Green drew his draft or check payable to the order of W. A. Cleaveland upon the bank for the sum of five thousand dollars, across the face of which he wrote his name as follows: "Good. C. W. Houghton, Pres.," thereby accepting the said check. That on the fourth day of February, 1854, the said Houghton drew his own check upon the defendant for $5,500, payable to the order of W. A. Cleveland, and that the defendant by their president the same Houghton, accepted the same in writing, in a similar manner. That on the 25th of February, 1854, another draft was drawn payable to the order of W. A. Cleveland for $10,000, which check was accepted by said Houghton, in the same manner as the others, and certified by him to be good. That these three several checks were indorsed by their payee, and so accepted and certified, was by him transferred and delivered to the plaintiffs. The drafts were presented to the defendants at their banking house for payment, but payment was refused. Wherefore the plaintiffs demanded judgment against the bank for $20,500, and interest.

The defendant denied the facts stated in the complaint; and alleged that the checks described therein were drawn and made, and if certified as set forth in the complaint, were certified at the office of the Long Island Water Works Company in the City of New York, and not at the banking house of the defendant, without authority, and when neither the said Thomas Green or the said C. W. Houghton had money or funds on deposit in said Farmers and Citizens Bank to enable said bank to pay the checks, or either of them. The said defendants were never informed by any person that these checks were certified, until about the time of the commencement of this suit. The defendant further alleged that the amount of the several checks was paid to Cleaveland in full by Thomas Green, shortly after the drawing of the checks, and before the transfer and delivering of them to the plaintiffs. That all of the said drafts or checks were transferred by Cleaveland to the plaintiffs, if either of them were transferred, without consideration and for the accommodation of Cleaveland. And that the checks were drawn and delivered in contravention of the statutes of the State of New York against usury, a sum greater than 7 per cent having been reserved for the money advanced upon the checks.

The action was referred to a referee, who found the following conclusions of fact:

First. That the three checks set forth in the complaint were drawn by the respective drawers thereof on the days of their several dates, and severally accepted and certified, endorsed and delivered, as therein alleged. Second. That the said checks, at the times they were respectively drawn and delivered to the payee therein named, were so accepted and certified by C. W. Houghton as president of the said bank, and he at the time of such acceptance and certification was the president of the defendant's bank, and as such president authorized by such bank to certify checks drawn upon said bank: such checks were so certified by said Houghton, at his business office in the city of New York, but of that fact, the plaintiffs when they received the same and paid the money thereupon, had no notice. Third. The said checks so certified were each of them on the several days they respectively bear date, delivered to the payee thereof, who, upon receiving them, paid to the respective drawers of them, upon the same day, the full amount of the face of each check. Fourth. The payee of such checks on the same day, of the respective dates of them, respectively endorsed and transferred the same and each of them to the plaintiffs; and the plaintiffs, when they received the said checks, respectively, paid to the payee thereof the full amount of the face of each check, and that the said plaintiffs so received the said checks in good faith. Fifth. The plaintiffs have ever since the said checks were severally passed to them as aforesaid been the actual holders of them and each of them. Sixth. On or before the first day of Dec., 1854, the plaintiffs presented the said checks to the defendants at their bank for payment, and payment thereof was demanded and refused. Seventh. The amount of such checks, with interest thereon from the first day of Dec., 1854, was $26,224.

Upon these facts the referee determined as matter of law. First. That the defendants were liable upon such checks by reason of such certification of them by the president of such bank. Second. That the plaintiffs were entitled to judgment for $26,224 with costs.

From the judgment entered upon this report of the referee, an appeal was taken to the General Term of the New York Supreme Court. The following is the opinion rendered at the decision of the case, affirming the judgment.

LEONARD, J.—An agent cannot, in general, act so as to bind his principal in matters touching his agency, where he has an adverse interest in himself. There is an exception in the application of this principle in favor of the holders of negotiable paper acquired in good faith before due, for value, without notice of the misconduct of the agent, or the knowledge of such facts as would amount to a want of good faith in the taker of such paper.

In the case before us the interest of Houghton is assumed to be at variance with his duty. His interest was an inducement to him to certify his own checks without funds. It was his duty not to do it. The public, however, cannot be apprised, from the face of the checks of the existence of this conflict between interest and duty. The president of the bank may have money there on deposit as well as another man. The money being in bank, the certification of his own check would not be adverse to the duty of the president. As between the bank and its own officer, it is entirely clear that such a certification would create no liability. The general authority to certify checks had been conferred by the bank on its president.

The identity between the name of the drawer and the president of the bank who certified the check, did not, necessarily, inform any one, by the mere force of that fact, that the drawer had certified his own check without funds in the bank. It was possible that he had so done. It was not probable, however; and the usual presumptions of innocence and fair dealings were against the existence of doubts about the conduct of the president of the bank.

The presumption of bad faith, on the part of the plaintiffs, does not necessarily arise from the manner of certification. That fact, with other circumstances, might have brought the referee, or a jury, to the conclusion that there was a want of good faith on the part of the plaintiffs in taking the checks, but the certification in the manner mentioned was not conclusive as evidence to deprive the plaintiffs of the protection afforded to *bona fida* holders of negotiable paper.

The legal principles respecting the subject of agency, as applicable to the cetification of checks, their character and negotiability, and the protection to which *bona fide* holders thereof are entitled, are fully considered by the Court of Appeals in *the Farmer's and Mechanics' Bank of Kent Co. vs. The Butchers and Drover's Bank*, and are controlling as far as they are applicable in the case now before the court.

We agree with the Referee, that the defendant cannot now urge any reason against a recovery arising from the delay occurring before the checks were presented for payment, after having, by objections at the trial, prevented the explanations offered by the plaintiffs in that respect. The several objections taken during the progress of the trial, to the admission or exclusion of evidence, &c., so far as they were urged at the argument, have been examined, but none of them are considered well taken, and do not seem to require an extended review. Judgement affirmed.

Quakake Railroad Company.

The trustees under the two mortgages executed by this company, delivered to Mr. Asa Packer, as its purchaser, a deed of the railroad property and franchises of the Company, in pursuance of a decree of the Supreme Court. A meeting of the persons on whose account said property was purchased, was recently held in Philadelphia for the purpose of organizing a new company under the name of "The Lehigh and Mahanoy Railroad Company."

The total amount of the capital stock of said company is to be one million dollars, to consist of twenty thousand shares of fifty dollars each.

The capital stock is to be issued as follows:—For every bond of the Quakake Railroad Company, with all outstanding coupons due and undue attached, and on which the full contribution of fifty per cent, has been paid, twelve shares; and that each stockholder shall be entitled, until ninety days after public notice given, to have a further equal amount of stock issued, upon the payment of $31 25 per share, making the total amount of stock issued on this basis $480,000. Interest is to be allowed at the rate of six per cent per annum on the estimated cash value of the bonds (to wit, 25 per cent,) on the face of the bonds, from July 1, 1862, and on all contributions on the bonds, from the date of such contributions.

A resolution was adopted, providing, That the President and Directors about to be elected shall be authorized and directed upon the delivery to them of a deed from Asa Packer for the road, road-bed and appurtenances, to execute a contract with the Catawissa Railroad Company, in pursuance of an agreement heretofore made between Asa Packer and the Catawissa Railroad Company.

Also, they are authorized to enter into a contract with Asa Packer for building the extension of the road into the Mahanoy coal field.

On motion it was resolved that a President and six Directors be elected to serve for the ensuing year.

The following ticket was elected:—

President—CHARLES HARTSHORNE.

Directors—Messrs. Asa Packer, W. W. Longstreth, Jacob P. Jones, Thomas T. Tasker, Samuel V. Merrick and Edward Yardley.

The Quakake Railroad connects the Lehigh Valley with the Catawissa Railroad, and if extended will serve as an outlet for Mahanoy coal to New York.

Great Western Railroad of Illinois.

This road extends from the State line of Illinois and Indiana to Naples, 174½ miles, and in connection with the Quincy and Toledo Railroad, and the Logansport, Peoria and Burlington Railroad, forms the southwest line from Toledo to the Mississippi river at Burlington and Quincy. From the report of the Directors it appears that the earnings and expenses of the year ending March 31, 1862, have been as follows:

Earnings from Passengers			$212,050 76
"	"	Freight	326,638 66
"	"	Mails and Express	27,939 18
"	"	Rent of cars, &c	24,180 82
			$591,408 92
Operating expenses			231,840 35
Net earnings			$269,568 57

The ratio of operating expenses to earnings was 54 42 per cent., as against 62 64 per cent. the previous year. The net earnings for three years past have been $504,817. The number of miles run during the same time was 1,125,904; in addition to which, locomotives were run during the last year 23,065 miles on connecting roads. The earnings per mile run by all trains was $1 46 1-10 cents, against $1 32 2-10 cents the previous year; and the expenses per mile were 76½ cents, against 82.8 cents the previous year; net gain per mile run 17.2 cents.

Number of Locomotives and Cars.—Locomotives, 20; first class passenger cars, 11; second class passenger cars, 3; mail and baggage cars 7; caboose cars, 6; box cars, 242; live stock cars, 204; platform and coal cars, 120.

	Miles.
Length of road from State line to Naples	174½
Length of Meredosia branch	5½
Length of side tracks	14.8
Total length of track	194.3

The report says: "We have endeavored to keep the road and its machinery in safe and efficient condition. No passenger was injured, notwithstanding a great number of troops were carried, by day, as well as by night, who would not submit to ordinary restraint.

"There was a considerable increase in the cost

of repairs of road and bridges. Over 78,000 sleepers were purchased, and also more new rails, spikes and chairs than in any previous year. Over 400 lineal feet of new truss bridges were built, and thoroughly covered and painted. Other truss bridges were repaired, as also were trestle bridges, and some of the latter sort rebuilt."—*Western Railroad Gazette, November* 29.

Pittsburg, Ft. Wayne and Chicago Railway.

The approximate earnings of the Pittsburg, Fort Wayne and Chicago Railway during the month of November, compared with the same period last year, were as follows:

	1862.	1861.
From Freights	$236,965 01	$201,909 32
" Passengers	106,073 77	80,752 68
" Express matter.	2,571 40	4,577 57
" Mails	7,825 00	7,825 00
" Rent of railway.	7,083 33	7,083 33
" Miscellaneous	1,397 75	642 01
Total	362,016 27	$302,789 91
Earnings, Jan'y 1, to October 31	3,009,993 00	2,427,039 85
Total to Nov. 30	$3,372,009 27	$2,729,829 76

Increase for November, $59,226 36, or 19½ per cent.; increase to November 30, $642,179 51, or 23½ per cent.

Metropolitan Railroads.

The City Councils of Washington have memorialized Congress to aid in the construction of at least two railroads leading out of Washington; one to the Chesapeake Bay, and one to Hagerstown via the Point of Rocks. The memorial embraces a joint resolution of the Corporation, approved September 27, 1862; a communication from a committee of the corporation to the President of the United States, dated October 28, 1862, and a communication of the Metropolitan Railroad Company relative to terms upon which they would build the road.

It represents that a through line by this route to the West, in connection with a road from Cumberland to Connellsville, will reduce the distance to Wheeling 106 miles, and to Pittsburg 110 miles.

The present distance by railroad to Point of Rocks is	91 miles.
By the Metropolitan	40 "
Saving	51 "
From Washington to Pittsburg is	376 miles.
By the Metropolitan	266 "
Saving	110 "
From Washington to Wheeling is	401 "
By the Metropolitan	295 "
Saving	106 "

It claims a reduction of time, from Washington to Pittsburg, from 33½ hours to 29 hours, and reduces a day's journey to Harper's Ferry to two hours. The memorial presents "the urgent necessity which exists for additional means of communication between the capital and the loyal portions of the United States; that through these means the defences of Washington might be made thoroughly effective." The memorial also embodies ordinances of the City Councils on the subject, and statements showing the liability of the city being cut off in great part from supplies by reason of ice on the Potomac at certain seasons, blockade of the river by batteries or armed vessels, etc., while there is now but one railroad line to the city. All the great capitals of Europe, it is shown, have at this day several railroad lines of communication, and even the city of Richmond has five. A road to the deep waters of the Chesapeake is advocated in consequence, 21 miles long, and another to Hagerstown via Point of Rocks. They give statistics of the movement of freight and troops for Government between the city and the Point of Rocks, over the Baltimore and Ohio Railroad, claiming that there would be a large saving by way of the Metropolitan Railroad.

The memorialists state that by a road to Point of Rocks, $3,000,000 of dollars annually could be saved to the Government. The railroad company furnish one third or one-fourth the capital, and ask the Government to guaranty bonds for the remainder of the sum necessary to its construction. The cost per mile is not to exceed $50,000.

Interest and Dividends.

The Rome, Watertown, and Ogdensburgh Railroad (late Watertown and Rome) has declared a semi-annual dividend of 3 per cent, payable on and after January 15.

The New York Central Railroad Company has declared a semi-annual dividend of 3½ per cent., payable on the 20th of February.

The Chicago and Rock Island Railroad Company, a half-yearly dividend of 3 per cent., free of tax, payable Jan. 12. Transfers close on Dec. 31, to reopen on Jan. 10.

The Rockport Railroad Company has declared a dividend of 4 per cent. on its capital stock.

The Metropolitan Railroad has declared a dividend of 5 per cent., free of the Government tax, payable Jan. 5 to stockholders of the 18th inst.

The Old Colony Railroad Company has declared a dividend of 3 per cent., payable Jan. 1 to holders of stock Dec 19.

The Boston and Providence Railroad has dedeclared a a semi-annual dividend of 4 per cent, free of Government tax, payable Jan. 1.

The Boston and Worcester Railroad a dividend of 4 per cent, free of tax, payable Jan. 1.

The Providence and Worcester Railroad Company has declared a semi-annual dividend of 4 per cent, payable Jan. 1.

The Cleveland and Erie Road has declared a dividend of 5 per cent for the past six months.

The Coupons due 1st of January, 1863, on $400,000 First Mortgage Bonds of Sacramento Valley Railroad company, will be paid, on presentation, in gold coin, less 3 per cent. excise tax, at the office of Schuchardt & Gebhard.

The Illinois State Treasurer gives notice that the January interest of Illinois State stocks will be paid at the American Exchange Bank, from the 1st to the 4th proximo inclusive; after that date only at Springfield. The holders of Illinois and Michigan Canal bonds, where coupons are exhausted, are required to present the bonds for payment.

The Michigan Central Railroad Company have declared a dividend of five dollars per share, free of Government tax payable on the first of January next, to holders of stock at the close of business on the 18th instant. Payment to be made to stockholders residing in Michigan and registered at Boston, at the office of the General Receiver, in Detroit; to holders of stock registered in the City of New York, at the office of the Farmers' Loan and Trust Co., in said city, and to all others at the office of the Treasurer, in the City of Boston.

The Bank of Commerce is paying on presentation all past due coupons, including those due 1st July last, on bonds of the State of Missouri, issued to the Hannibal and St. Joseph Railroad Company.

The Hannibal and St. Joseph propose to fund the coupons for a number of years on their bonds.

A dividend of 5 per cent. was declared by the Little Miami Railroad Company on the 22d ult., payable Dec. 1, at the company's office, Cincinnati. Eastern stockholders can receive their dividends in New York funds by addressing the Treasurer.

The trustees of the first mortgage bondholders of the Vermont Valley Railroad Company, have declared a dividend of fifty per cent. of the coupons due April 1, 1857, being the balance due on said coupons, payable on and after the 15th of December, 1862, at the office of the Treasurer, at Bellow's Falls, Vt. For the convenience of bondholders in New York and elsewhere, the dividend will be paid for thirty days from the 15th of December, at the office of Alexander Hamilton Jr., No. 41 Wall-st., Jauncey-court, N. Y.

Depths and Value of Mines in England.

An English journal, after valuing the total product of the mines of Great Britain at £41,491,102 per annum, and computing that England's supply of coal will last at least seven hundred years longer, at present rates of consumption, gives the following account of the depth to which the bowels of the earth have been pierced in England:

The depth to which we mine for coal is already great. The pit at Dunkenfield, in Cheshire, is 2004 feet below the surface to the point where it intersects the "Black Mine Coal," a seam that is four feet six inches thick, and the best quality for domestic and manufacturing purposes; from this point a further depth of five hundred feet has been attained by means of an engine plane in the bed of coal, so that a great portion of the coal is raised from the enormous depth of 2504 feet.

At Pendleton, near Manchester, coal is daily worked from the enormous depth of 2500 feet; and the coal of Wigan is brought from 1773 feet below the surface. Many of the Durham colleries are equally deep, and far more extended in their subterranean labyrinths. Some of those, and others in Cumberland, are worked out far under the bed of the sea; and on both sides of the island we are rapidly extending our subterranean burrowing.

Dolcoath tin mines, in Cornwall, is now working at one thousand eight hundred feet from the surface, and is rapidly sinking deeper. The depth of Tresvean, a copper mine, is 2180 feet. Many other tin and copper mines are approaching these depths; and under the Atlantic waves, man is pursuing his labors daily at half a mile from the surface. To aid the miner in these severe tasks, the gigantic steam engines, with cylinders 100 inches in diameter, are employed in pumping water from these vast depths.

Winding machines, which are masterpieces of mechanical skill, are ever at work raising the minerals from each dark abyss, and "man engines," of considerable ingenuity—so called because they bring the wearied miner to the light of day, saving him from the toil of climbing on perpendicular ladders—are introduced in many of our most perfectly conducted mines. Our coal costs us annually one thousand lives, and more than double that number of our metalliferous miners perish from accidents in the mines, or at an unusually early age—thirty two—from diseases contracted by the condition of their toils.

By the industry of our mining population there is annually added to our national wealth con-

siderably more than £30,000,000. This, when elaborated by the process of manufacture, is increased in value ten-fold. While we are thus drawing upon that "hoarded treasure, guarded by dragons white and red," which the enchanter Martin is fabled to have concealed in the caves of the earth, we should remember how much of mental labor and muscular power is expended, and how large a per centage of human life is annually sacrificed in the contest with those hydra-headed evils which are truly personified by the dragons of the legend.

The Stamp Tax.

The people are confused and perplexed as to the requirements of the law in the use of stamps. The diversity of kinds and variety of denominations required for use upon instruments in writing, packages, preparations, etc., renders a Stamp Compendium as necessary as an Almanac. The following, from *Thompson's Bank Note Reporter*, will be found convenient for reference:

Agreements.—Of every name and nature, and all appraisments, and all memorandums between two or more parties, except such as hereafter specified under other heads, for each sheet or piece of paper, 5 cents.

Bank Checks.—Checks, drafts payable on presentation, and orders for the payment of money at sight, for any amount over $20, 2 cents. For all checks, drafts or orders for $20 and under, no stamps are required.

Bills Inland.—All time drafts, and all notes and due bills payable at specific times, or payable on demand, for sums over $20 to $100, 5 cents; to $200, 10 cents; to $350, 15 cents; to $500, 20 cents; to $750, 30 cents; to $1,000, 40 cents; to $1,500, 60 cents; to $2,500, $1; to $5,000, $1.50; and for every $2,500 and parts of the same over $5,000, $1.

Bonds.—Of indemnity, for due performance, and to account for money, 50 cents; other descriptions, 25 cents.

Certificates.—Of Stock, of Port Warden, of Marine Surveyor, for damages, and for shares of interest, for amounts exceeding $50, 25 cents; if for deposits of money, to $100, 2 cents; do. over $100, 5 cents; all other certificates, 10 cents.

Conveyance, Deeds &c.—Where the value is to $100, no stamp; to $500, 50 cents; to $1,000, $1; to $2,500, $2; to $5,000, $5; to $10,000, $10; to $20,000, $20; and for every $10,000, or parts of $10,000 in excess of $50,000, $20.

Dispatch by Telegraph.—If the charge for the first ten words is ten cents, 1 cent; if the charge for the first ten words is over ten cents, three cents.

Express.—Express receipts must be stamped. To a 25 cent charge, 1 cent; to $1 charge, two cents; all charges over $1, 5 cents.

Insurance.—Fire inland and marine policies are all included in one kind, and require a stamp for 25 cents.

Insurance, Life—Requires a stamp expressly for life insurance policies, to $1,000, 25 cents; to $5,000, 50 cents; to any amount over $5,000, one dollar.

Lease.—All amounts of rent are the same, but time varies the amount of stamp; to 3 years, 50 cents; exceeding 3 years, $1.

Legal Documents.—All processes by which any suit is commenced in any Court, 50 cents.

All processes issued by a Justice of the Peace, and criminal proceedings, are exempt.

Medicines, Perfumery, etc.—This kind of stamp is required for a very large portion of every Apothecary's shop; for a 25 cent package, vial, box or bottle, 1 cent; 50 cents, 2 cents; 75 cents, 3 cents; $1, 4 cents; and for every 50 cents, or part of 50 cents over $1, 2 cents.

Mortgage.—On real, personal or mixed estate, or property, or papers giving loans, to $500, 50 cents; to $1000, $1; to $2000, $2, to $5000, $5; to 10,000, $10; to $20,000, $15; and for every additional $10; or part thereof.

Notes.—See bills inland.

Power of Attorney, and proxy.—A simple power 25 cents; a compound power must have as many stamps as there are branches of business enumerated. Powers relating to real estate, $1; if for a double purpose, to rent and to sell, $2. Proxies are ten cents.

Probate of Will.—Letters of administration to $2,500, 50 cents; to $5,000, $1; to $20,000, $2; to $50,000, $5; to $100,000, $10; to $150,000 $20; and for each additional 50,000 or part of 50,000, $10.

Protest.—For every instrument protested, 25 cents.

Warehouse Receipts—For any goods, merchandize or property held on storage on any public or private premises, 25 cents.

Wills—require no stamps.

In the whole list we find twenty-six kinds of stamps, and the number of denominations quite beyond defining; but by using smaller stamps (of the right kind) in lieu of one large stamp the number of denominations may be reduced to about seventy-five plates or sheets.

St. Louis Alton and Terre Haute Railroad.

The following is a statement of the bonds and stock of the St. Louis, Alton and Terre Haute Railroad Company:

First Mortgage Bonds, 7 per cent.	$2,200,000
Second Mortgage Bonds, Pref. 7 pr. ct..	2,800,000
Second Mort. Bonds, Income, 7 per ct..	1,700,000
Total debt	$6,700,000
Preferred Stock, 7 per cent	1,500,000
Common Stock	2,000,000
Total Stock and debt	$10,200,000

The earnings since Jan. 1, 1862, have been as follows;

January	$74,251	July	$67,720
February	63,880	August	90,358
March	68,748	September	95,969
April	71,854	October	118,887
May	112,383	November	129,166
June	93,766		

The net earnings for the year are estimated at $600,000, or sufficient to pay interest on the entire bonded debt, and 7 per cent on the preferred stock. Interest on the bonds will be promptly paid as the coupons mature, and dividends on the preferred stock are expected during the ensuing year. The road is 218 miles in length, and is developing a business far exceeding the expectations of its managers.

The Broad Top Coal Region.

It is a source of extreme gratification to all who take an interest in the development of the mineral resources of our State, to know that the business of the Broad Top coal region is steadily increasing, and that it promises ere long to be one of the most important elements of material wealth to our Commonwealth.

The coal produced from the region is of the most superior quality, far surpassing for all ordinary purposes, that produced from the Cumberland region. The principal branch or lateral roads, connecting the mines with the Huntington road, are all being extended, and we learn that a survey is now being made preparatory to the construction of a road up, what is known as Hamilton Run—which will join the main trunk road at Coalmont.

The length of road to be here constructed will not exceed a mile and a-half, and will bring a large quantity of coal into market which has hitherto been inaccessible. Two or three years since "Coalmont," the point at which this new road commences, was almost a wilderness. It is now a thrifty and growing town; and the same may be said of all the towns in the Broad Top region. The Broad Top Railroad Company, which was for several years greatly embarrassed, we are glad to know is rapidly recovering from its difficulties, and another year will doubtless be sufficient to place it among the successful and remunerating corporations of our good old Commonwealth.—*Philadelphia News, Dec. 8.*

Railroad Earnings--Weekly.

The earnings of the Toledo and Wabash railroad in the 2d week of Dec., 1862, were ... $24,501 68
Do., 1861 ... 20,943 76

Increase ... $3,557 92

The Galena and Chicago Railroad earned the 2d week in December, 1862 ... $33,134 62
Do., 1861 ... 26,843 91

Increase ... $6,290 71

The second week of December on the Illinois Central Railroad shows an increase of $40,000 on the same week of last year.

The Michigan Central Railroad earned in the 2d week of December, 1862 ... $56,431 96
Do., 1861 ... 43,155 73

Increase ... $13,276 23

The Chicago and Rock Island Railroad shows a gain in the 2d week of December of $4,200.

The Michigan Southern Railroad earned for the 2d week of December, 1862 ... $58,580 00
Do., 1861 ... 43,080 00

Increase ... $15,500 00

The Cleveland and Toledo Railroad earned the 2d week of December, 1862 ... $40,872 00
Do., 1861 ... 24,853 00

Increase ... $16,019 00

The traffic of the Great Western Railway of Canada for the week ending Dec. 12, 1862, was as follows:

Passengers	$18,010 89
Freight and live stock	42,658 78
Mails and sundries	1,327 81
	$61,996 48
Corresponding week of last year	52,800 40

Increase ... $9,196 08

The Chicago and Northwestern Railroad earned in the 2d week of December, 1862 ... $20,209 70
Corresponding period, 1861 ... 11,318 52

Increase ... $8,891 18

The earnings of the Terre Haute and Alton Railroad for December, 1862, were ... $27,624 00
Do., 1861 ... 16,651 00

Increase (70 per cent.) ... $10,973 00

The earnings of the Chicago and Alton Railroad for the 2d week in December were:

	1862.	1861.
Passengers	$9,676 60	$4,945 10
Freights	22,124 70	11,498 36
Sundries	834 33	815 33
Total	$32,635 63	$17,258 79
Increase in 1862	15,376 84	
Total since Jan. 1	$1,167,025 03	$1,053,410 14

Baltimore and Ohio Railroad.

We learn that General Kelley went down the Baltimore and Ohio road the other day as far as North Mountain Station on a tour of inspection—North Mountain is about seventy-two miles from Cumberland, and the road is now in perfect repair between the two points, including the bridge at Back Creek. The road is now completed within seven miles of Martinsburg, and it is expected that by the first of January the whole route will be again placed in order and that the trains will be running between this city and Baltimore. The rebels destroyed the road

most effectually. For about twenty miles along the route almost every tie was totally or partially destroyed.—*Wheeling Intelligencer.*

New York State Banks.

LIABILITIES AND RESOURCES OF THE BANKS OF THE STATE OF NEW YORK, AT THE CLOSE OF SEPTEMBER, 1860,—DECEMBER, 1861,—SEPTEMBER, 1862.

LIABILITIES—	Sept. 1860.	Dec. 1861.	Sept. 1862.
Capital	$111,834,000	$109,403,000	$108,606,000
Circulation	31,759,000	30,553,000	37,557,000
Profits	13,316,000	14,152,000	14,269,000
Due other Banks	29,707,000	34,432,000	60,421,000
Due corporations	2,253,000	2,501,000	1,800,000
Treasurer of State	3,570,000	3,916,000	5,846,000
Due depositors	116,190,000	125,179,000	186,391,000
Miscellaneous	2,616,000	14,619,000	2,060,000
Total liabilities	$311,245,000	$334,755,000	$416,990,000
RESOURCES—			
Loans	$200,114,000	$191,093,000	$165,583,000
Overdrafts	423,000	368,000	507,000
Due from Banks	17,167,000	18,799,000	24,072,000
Real estate	8,866,000	9,219,000	9,593,000
Specie	21,711,000	29,103,000	39,284,000
Cash items	22,913,000	18,996,000	38,121,000
Stocks and mortgages	36,610,000	63,264,000	113,754,000
Notes of other Banks	2,610,000	2,122,000	25,174,000
Expense account	931,000	1,811,000	902,000
Total resources	$321,245,000	$334,755,000	$416,990,000

The features which claim attention in this exhibit of the bank movement of this State are the remarkable changes in the items of Stock investments, circulation, and deposits. Assuming, as we well may in Wall street, that the deposits are a part of the active circulation, it would appear that they form a fund of over two hundred and fifty millions of dollars—viz. due to country banks $60,421,000; individuals, $186,390,000; miscellaneous $9,700,000. These aggregates at the time of suspension (30 December 1861) were only 180 millions. Thus in the short space of nine months (from the close of December, 1861, to the close of September, 1862,) the circulation has increased 25 per cent., the deposits about 38 per cent.: while the loans including stocks and mortgages are only twenty-five millions in excess of those at the close of 1861.

The average bank capital of the institutions reported is about $350,000, and the capital mainly centered at the following points:

		No. of Banks.
New York City	$69,125,820	54
Brooklyn	2,500,000	7
Albany	3,091,000	8
Buffalo	2,191,000	9
Po'keepsie	1,095,000	5
Rochester	2,354,000	10
Syracuse	1,100,000	7
Troy	3,033,000	11
Utica	1,335,000	5

These are the only places having over one million of bank capital.

It will be observed that the specie is ten millions in excess of that reported at the close of 1861. This indicates that the Banks hold this temporarily, and have loaned upon the deposit, the effect of which inevitably is to keep up the price of gold.—*Hallett's Financial Circular.*

Cleveland and Mahoning Railroad.

The Mahoning *Register* states that the directors of the Cleveland and Mahoning Railroad have determined to extend the branch road recently let from Youngstown to Hubbard, as far as Sharon, Pa. The road will run through an immense coal field almost its entire length, and aid greatly in developing the underground wealth of that region.

The Census of Great Britain.

An abstract of the returns shows that on the 8th of April, 1861, the population of England and Wales, with the Isle of Man and Channel Islands, including the army at home and the navy and seamen in the ports, rivers and creeks—that is to say, all the persons in the kingdom—amounted in number to 20,209,671. The returns for Scotland having been also revised, the population of Great Britain on that day is found to have been 23,271,-965; and the returns for Ireland, when the revision of these also is completed, will bring the population of the United Kingdom to above 29,000,000. The increase in England and Wales alone since the census of 1851 has been 2,138,615, notwithstanding that in the interval 2,250,000 persons emigrated from the United Kingdom, of whom it is calculated that 640,316 were English. Since the census of 1861 the male population of England and Wales has increased 11.33 per cent, the female population 12.50 per cent. The excess of females over males, 895,159 in 1851, had grown to 513,706 in 1861; and these figures do not include the army, navy, and seamen out of the kingdom. In Scotland the disproportion is still greater; in Great Britain, with the islands in the British seas, the excess of females over males in 1861 was 687,471, to which the Irish returns, according to the unrevised abstract, have above 150,000 to add. On the census night 62,430 persons were on board vessels in the harbors, rivers, and creeks of England and Wales, without reckoning persons in barges on canals; in the metropolitan district, 8,084 persons were on board vessels in the docks and the Thames. In England and Wales 124,962 persons were in workhouses and workhouse schools, 13,456 in hospitals, 24,207 in lunatic asylums, 26,495 in prisons and reformatories, 23,598 in orphan asylums and other principal charitable institutions, without reckoning in any instance the official staff in charge of these institutions; 80,839 persons, military and families of military were in barracks. The population of the Isle of Man and the Channel Islands, which had previously been increasing, has, in the ten years under review, hardly maintained its number, except by an increase of the military force.

Atlantic and Great Western Railway.

The work upon the Atlantic and Great Western Railroad is progressing with unprecedented rapidity. Mr. Kennard is exhibiting a great amount of energy and ability, and pushing forward this enterprise which has no parallel in the history of railroad building in this country. The bridge across Mahoning, at Warren, is up and the track will be laid over it this week. The bridge over the Mahoning at Braceville is also nearly completed; also that over Duck Creek, at Leavittsburg. The iron is laid from Ravenna to Braceville, also from the Mahoning bridge in Braceville nearly or quite to the bridge at Warren. There is scarcely a doubt that before this month expires the track will be completed from Salamanca, N. Y., the point of junction with the New-York and Erie Railroad, and Akron and Warren will be less than 24 hours' travel from New-York.

Finances of Ohio.

An abstract of the report of the Ohio Treasurer shows that the receipts of the State for the fiscal year ending Nov. 15, 1862, were $6,572,307. The disbursements were $6,029,566, leaving a balance in the treasury of $482,740. The receipts exceed those of the previous year $854,579, and the disbursements were larger by $55,002.

Miscellaneous.

The Commissioner of Internal Revenue has made the following decisions: Railroad companies making cars and locomotives to replace old stock or to increase their equipments must pay a tax upon the whole value of such manufactures if their annual products exceed $600, even though the articles are manufactured for their own use.

The Courts of Pennsylvania have allowed the Pennsylvania Coal Company to build their road connecting with the Erie Railway, on lands owned by the Delaware and Hudson Canal Co.

The Camden and Amboy Railroad Company are constructing a double track between Bordentown and Camden.

At Chicago the Controller of the city sold $75,-000 municipal bonds, bearing 7 per cent. interest, at 109.

The resolution giving permission to the New Haven Railroad Company to lay a single track from their freight depot through Elm street to Leonard street was adopted.

There were two amendments to the constitution of Wisconsin voted on at the last election. One, to reduce the rate of interest from ten to seven per cent, was adopted.

The taxable property in San Francisco this year is estimated at $20,900,000. The entire population is over 90,000.

The Mayor has signed the act authorizing the Harlem Railroad Company to extend their city track through Forty-second street and up Madison avenue to Central Park.

Winona and St. Peter Railroad.

The work goes bravely on with the Winona and St. Peter Railroad. The grading from here to Stockton is nearly all levelled up, and the men are now rushing forward to the laying of ties and iron. The track is laid out as far as Mr. Denman's, and the company have iron enough on hand here to reach beyond Minnesota City. The balance is arriving daily from Lacrosse.—*Winona Republican.*

Sorghum.

The Ottawa *Free Trader* says that there are about twenty sorghum mills in LaSalle county, and that they have manufactured full 150,000 gallons during the present year. This is more than the county can consume, and will leave a handsome margin for export.

German Settlement in Upper Canada.

The government have concluded an arrangement with F. Telgmann, Esq., as agent for a party of Prussian emigrants, for the purchase of 60,000 acres of land in the county of Frontenac, on which to form a settlement. Active preparations are at once to commence for the reception of the immigrants and their families, who will arrive out in the forthcoming spring.—*Kingston* (Canadian) *News.*

Pennsylvania Central-Pittsburgh to Boston.

The Pennsylvania Railroad Company will probably be enabled, in a short time, to make a through connection between Pittsburgh and Albany and Boston, avoiding both Philadelphia and New York. The route will be as follows: Pittsburgh to Tyrone, Pennsylvania Central Railroad; Tyrone to Lock Haven Railroad; Lock Haven to Williamsport, Philadelphia and Erie Railroad; New York to Elmira, Elmira Railroad; Elmira to Binghamton, New York and Erie Railroad; Binghamton to Albany [in progress,] Albany and Susquehannah Railroad; Albany to Boston, Western Railroad.

The total distance from Pittsburg to Boston will be about 650 miles, of which the Pennsylvania Central Railroad will control over one-third

American Railroad Journal.

Saturday, December 27, 1862.

Stock and Money Market.

The principal and interest of the National loan made in 1842, and due December 31st inst. amounting to $2,883,364, will be paid off in coin. Thus in the midst of the financial pressure of the war, there is no repudiation of the public debt, no evasion in the form of payment, or shift to escape the tenor of the original bonds. This result is in keeping with all our previous history, and characteristic of the good faith of the Government. In other countries some proposition would most probably have been put forth, to pay this debt by a direct issue of new security, but here, those who have trusted their money in 1842 to the nation, not only get it back but a very large profit by the transaction.

We are happy to notice that the Railways are doing well, their shares are advancing and inspiring confidence. Among the most prominent in public favor just now are, New York Central, Erie preferred, Harlem, Reading, Rome and Watertown, Michigan Central, Southern guaranteed, Illinois Central scrip, Cleveland and Pittsburg, Galena, Toledo, Rock Island, Burlington and Quincy, Wabash and Western preferred, Hudson River, Harlem preferred, Milwaukee and Prairie Du Chien, and Pittsburg, Fort Wayne and Chicago.

The Erie seems destined to a great and permanent success. Its new connection with the coal fields, its facilities for an important trade with Ohio and Pennsylvania by means of the Atlantic and Great Western "which was not so before," ensur

it the character of a Grand Trunk, unfailing sources of business, and a commercial character which is almost unrivalled. Those who watched over this project in its infancy, and saw its distresses while in its youth, now rejoice at its vigorous maturity and strength.

The recent serious difficulties at Washington in relation to the Cabinet have for the present blown over, but whether they will entirely subside, or again raise their crest, it is not easy to decide dogmatically. They are so intimately connected with our finances, the progress of internal improvements, and the unity and confidence of the people of the north, that they cannot be passed over by any Journal which is the advocate of the greatest and most active of American interests. We can therefore enunciate this sentiment with the utmost disinterestedness, that the prosecution of the war, the stability of the Government and the unwavering support of the people require the ablest men of the nation to be called in council at Washington, and while all parties give their faithful support to the President in the performance of his official duties, he in turn is bound to reciprocate by an equal regard to public opinion.

Mr. Chase remains in the Cabinet. Whatever may be his political opinions on certain vexed questions he displays courage, coolness and intellect in the management of his department. While in the time of John Tyler, we saw mendicant agents abroad begging for financial aid to the Government, and during the administration of the late President, twelve per cent was paid for money in Wall street, by his last Secretary of the Treasury, we now witness the amazing spectacle of a great war carried on not only without foreign pecuniary aid, but actually in spite of the opposition of foreign bankers. If no war in Europe can be carried on without the consent of British and continental Bankers, we are strong enough and rich enough to do without even their sympathy.

We do not hesitate to say then, that if we do not agree with Mr. Chase fully in all his views, we can indorse his good faith, integrity and ability.

On what basis money for the future is to be raised depends on the action of Congress. They grant the money and they take their choice. If we could look at a proposition by itself, unconnected with its correlatives, there could scarcely be any difficulty in arriving at a correct conclusion. Thus if it be asked, what is the best plan for the Government, either to borrow money of capitalists, pay them the interest they demand and take their promises to pay, or to borrow of the people directly without interest, there could be no doubt but that the latter form would be decided to be preferable. The objection to it, and it is a very striking one, is, that this borrowing of the people, or in other words, purchasing their property and labor for the use of the Government, and paying for it in its Treasury issues, is to set afloat an enormous quantity of paper, the redemption of which in gold with any immediate certainty is impossible, and moreover that in doing so, prices will correspondingly be inflated, fixed values heretofore, will now become fluctuating and uncertain. But will not this consequence flow equally from the large issues of Bank paper, and do we not practically find that expansion on the part of our monied institutions is now the order of the day. And since paper money is unavoidable, and can not be dispensed with, which is the best to be used in the present emergency, that of local institutions who are to get large profits out of the people by its excessive issue, with the same result of depreciation in fixed properties, or an expansion of currency for which the Government pays no interest, or in other words for which the people during its use and circulation pay no interest. If we could pursue the beaten track and keep down to the old standard of gold and silver, that would present a different state of things, but we cannot. Nor England, nor France, nor Austria, nor Russia in their numerous wars were ever able to do so, though ever so willing, for the precious metals do not commercially exist in quantities sufficient to meet the demands of even an inconsiderable war if it be protracted.

What then is the advantage of disturbing the political minds of the people, by arguments addressed to their fears, which are founded on impossibilities? We hold those bankers and financiers culpable, who wish to have the nation lie down on their Procrustean bed. At all events we prefer to have the public resources stretched out in the present crisis rather than cut off. Our maxim is to make the best of everything. If a large Government loan can be effected at a fair rate, let us try it. Paper will follow of course of all sorts and descriptions. Inflation will also follow and not at any long interval. If on the other hand, Government notes are to be issued, we shall see nothing worse except the entailment of a future heavy redemption without accumulating interest. If the public interest requires the people to carry this load, we have no doubt they will do so with cheerfulness. Of course capital will not complain, for it will be the gainer, however much labor may suffer.

We notice that efforts are again renewed in Congress for the enlargement of the Illinois Canal, and that Mr. Ogden of Chicago, and Mr. S. B. Ruggles, of this city, both able men are at Washington urging the measure. There is no doubt but that at the proper time such a work would be desirable. As a commercial project we think well of it, as a military one it is doubtful. Suppose the canal was at this moment of capacity enough to admit armed steamers to pass down and into the Mississippi river, they could not move any more than the flotillas we now have there, but which are detained for want of water. If the National Government is called upon for any extraordinary aid at this moment, the Pacific Railroad should be its first care. If the line was constructed on public account as far as the Colorado territory, it would set hundreds of thousands of miners at work, from whom in the shape of royalties, a large annual revenue could be derived by the Treasury. It is the opinion of some enthusiastic yet very sensible men, that in these rocky mountains lie gold and silver enough to pay off the war debt, much faster than it ever can be paid by ordinary means. And while upon this subject we wish to say, that although the subscriptions to the stock of the Pacific Railway have proved to be comparatively nothing, and for very natural causes, yet in some places westward, a commendable interest has been shown. Nebraska, but a country in its infancy has subscribed $12,000, while New York has subscribed nothing. This, however, is but an incident. For beyond al question, the capitalists of this city, and those of some of the largest western towns will ere long take up the project and give it life and action. A concentration for this object is already maturing.

Before we close our remarks, we have to notice the condition of the specie market in Canada. American silver is no longer taken there at par. It is subject to a discount in business of 3a4 per cent. Even British silver is also to be taken at a discount of 2 per cent.

It appears by a return furnished by the agent of the National Express Company to the Montreal Gazette, that that company alone has brought into the single city of Montreal from the United States since the beginning of the present year, no less a sum than $2,908,306, mostly in silver, of which $786,135 was brought in the month of November alone; while it has carried back from Canada to the United States $1,990,635 mostly in gold. The difference has doubtless been remitted in bills of exchange.

Here a very handsome profit has been made by some persons, it is not difficult to say who they are. It is only another proof of the shrewdness of money dealers, always ready to take advantage of every circumstance which will afford them a profit on their favorite commodity. No cause, no country, no logic has any influence on their minds, when their interest is to be forwarded, and truth to say they are like most other men. But they have this enormous advantage, that the article they deal in is master of all others, and we should be glad to see the day when the standard of value ceased to be more important than the value itself.

We quote sales of railroad and other securities as follows:

New York.—Buffalo, New York and Erie 2d mort., 85; Bellefontaine and Indiana, 113; Alton and Terre Haute, 20 and 23½; do., pref., 42 and 48; Cumberland Coal pref., 13; Rome and Watertown, 83; Illinois Central full stock, 77; Sixth Avenue R. R. 126; Nicaraugua Transit, 5.

Baltimore.—Central Ohio 1st mort., 100; do., income bonds, 17; Western Maryland bonds, 76.

British Railway Legislation.

The amalgamation about to be effected between the Great Western, West Midland and South Wales Railway Companies England, will require amendments in Parliament to existing acts, numbering more than five hundred as may be seen by reference to the official notice published by the Solicitors.

Internal Improvements in Egypt.

From a late private letter we learn, says the Boston *Advertiser*, that the smaller Suez canal has already been opened to the waters of the Mediterranean, half way across the Isthmus. It is confidently expected the large ship canal will be completed within four years. The company have four million dollars unexpended capital lying in the bank of France. They are now importing several large excavating machines of prodigious power, which can be worked with comparatively few hands. They have heretofore employed twenty thousand laborers, but expect to complete the canal, by the aid of these machines, with two thousand laborers, within the period we have mentioned.

Another work of internal improvement is likewise projected in Egypt. This is a new railway route to connect Alexandria and Cairo with the Red Sea, by way of Keneh and Kosseir, terminating at the port of Berenice. Kench is not far north of Thebes, so that the traveller's journey to the upper country of Egypt will be materially abridged by this route.

The Vice Roy has ordered one quarter of the cultivable land of Egypt to be sown with cotton. If the requirement is carried out, as it doubtless will be, the next year's crop will be two thirds greater than any that has been raised there heretofore.

Harlem Railway. Port Morris. Milk Depot.

The management of the Harlem Railway we have frequently spoken of with approval, because it is founded on scientific and practical principles, with one good head and one strong will indispensable to the successful execution of great designs. We now learn some interesting facts particularly connected with its future. From Melrose, just across the Harlem river, a branch of the railway diverges for two miles to Port Morris on the shore of the East river. At this place the Harlem Company owns in fee a large piece of ground, about eighty acres, where they have erected wharves and docks more than 800 feet in length, along side of which there is forty feet of water. Here the heavy freight of grain, coal, lumber, &c., is received, and if necessary stored until transhipped either by water or rails. This is a terminus therefore, possessing extraordinary advantages for the Harlem Company, and there is no other which has anything to compare with it except the Erie with its long dock in the State of New Jersey. Heavy freight when it arrives at Port Morris is taken from the Company's wharves, or conveyed to them by the Swiftsure line of steamers and barges, which leave daily at 4 P. M. from the foot of Broad street with the northern freight, and return with what in the morning is destined for the City.

It is intended among other things to make Port Morris the regular landing place of the Steamer Great Eastern in her future voyages, as here her passengers may be put on board the cars, and brought comfortably into the city in thirty minutes, without the hindrance of crowds, or the obstructions so innumerable at the city wharves. Nor do we see why provision, and flour, and grain ships may not hereafter load at this place, particularly as elevators are to be erected there, and the wharfage dues are very light and inconsiderable.

We should not be at all surprised to see quite a large suburb springing up at Port Morris from its possessing so many advantages. Especially when we reflect, that the railway bridge across the Hudson river at Albany is now a settled affair, and its opponents in the Courts have failed to sustain their objections. If it were an illegal obstruction, it need not be a practical one. At Chicago, the bridges over the two branches of the river there have immense spans, and yet are easily made to open on their centres by the strength of two men, and that very quickly. Steamers as large and with heavier draft of water than any which go up to the city of Troy, pass these bridges constantly day and night without the least difficulty.

In the bill which authorizes the construction of this bridge, the right of the Harlem Company to its use is specially provided for, so that its cars can be sent through by arrangement to Buffalo, or even Ogdensburg, should such a necessity occur to avoid transhipments or breakage of bulk. In this view therefore, with Port Morris as its true terminus at navigation, and the Albany bridge a new outlet for its traffic, West and North, the Harlem Company passes into the rank of the first class roads.

Its milk business of which in our last number we gave some interesting statistics, has grown so large, that it has become necessary to erect a Milk Depot having the dimensions of 450×75 feet. Here in different parts of the building the different consignments of milk will be arranged in an orderly manner so that they can be readily found. The milkmen, or consignees, on paying their freight bills, present tickets obtained at the paying office, to the party in charge of the cars, receive them, load up and depart before daylight for their respective routes in the city. Comfortable sitting-rooms are provided for the milkmen while they are waiting for the train, and Mr. Campbell with his usual kindness and forethought has had a restaurant fitted up for them in the building, where they can obtain an early and hot breakfast.

The milk business is worth to this Company no less than two hundred and seventy thousand dollars a year, and it might be greatly increased if the Dairymen managed their part of the business as well as they should. Thus they give credit to their customers and come to the city at intervals to collect their dues. The city milkman receives six cents per quart, and pays the Dairyman two, and the railroad one. Of course he has the use of 33 per cent. of the Dairyman's money. In too many instances heavy losses follow this system of credit, and some of the sufferers have abandoned the milk business altogether, in disgust at their losses.

Now at this new depot it would be a very easy thing for the Dairymen to have a general agent, who should receive the price of the milk at the time of its delivery, precisely as the Harlem Company does. In this way they would make it a cash business and a perfectly safe one. It would also on this account increase the number of dairies along the splendid pastoral country through which the road passes, and the New Yorkers instead of averaging but a pint a day of this healthful and nourishing beverage, might have as much more as they desired.

The advantages of railways thus continually demonstrate themselves, and we are well pleased when we can record their varied usefulness, and their expansion to the wants and necessities of the times.

Eastern Bengal Railway.

The directors state in their report that a train ran through all the way from Calcutta to Kooshtee on the 20th of August last, and that a train with materials has been run through every week since. On the 12th of September the Lieutenant-Governor of Bengal returned to Calcutta from a tour in the provinces by a special train from Kooshtee. He alighted to inspect the iron bridge of about 1,000 feet in length over the river Koomar (the heaviest work on the railway), and the train stopped at the principal stations along the line. Notwithstanding these delays, the journey was accomplished in five hours and a half. It was subsequently determined by the agent and chief engineer, with the sanction of the Government, to open the portion of the line between Calcutta and Ranaghat, a distance of 45 miles, for passenger traffic. The first passenger train commenced running on the 29th of September last, and 1,553 passengers were booked out of Calcutta on that day. During the week immediately following the receipts for passengers amounted to 4,000 rupees. The latest advices state that arrangements were being made for opening the line throughout from Calcutta to Kooshtee for general traffic on the 1st of November. The agent stated that he had every reason to believe that soon after the opening steam communication by the rivers would be established between Kooshtee, the terminal station on the Ganges, and Serajgunge, the great mart or emporium of trade of Eastern Bengal, and that he expected a large traffic by that means. The directors have every reason to feel satisfied that the line was actually opened throughout at the time mentioned. The capital account shows that £1,399,700 had been received, and £1,206,696 expended, leaving a balance of £193,003.

Cast Steel, Railway Tyres, Axles, etc.

We have received from Messrs Thomas Prosser & Son, No. 28 Platt street, in this city, a collection of valuable circulars, pamphlets and designs, relating to steel and its manufactures as applicable to railway purposes, and especially tyres for locomotives, tenders and wagons. A book of many pages accompanying them, contains drawings of the tyres of the full size, from which may be ascertained all the forms adopted, on the leading European roads. Some of these made of cast steel used on the Eastern Counties Railway, have been found after running 56,647 miles, to have worn only $\frac{3}{32}$nds of an inch. The thickness of these tyres is stated to be only 1 ¼ inch, and for the heaviest machines but 1 ½ inch. The most finished are furnished at £10 10s. per cwt. when the diameter of the wheel is six feet.

Axles of the same material of 5 inches in diameter are furnished, if straight, at £9 10s. per cwt; if with cranks forged in one piece £14 per cwt; if with cranks at each end and pins inserted £17 10. The material is also applied to paddle shafts and main shafts of steamers. The tyres are in use on twenty-one railways in Europe, and are introduced on the Atlantic and Great Western,

on the Buffalo and State line and Pennsylvania Roads in this country.

Specimens of these various fabrics were successfully exhibited at the recent Exhibition at London; and we find in the *Illustrated London News*, the following notice, premising that the manufacturer is Mr. FREDERICK KRUPP, of Essen, Prussia. The agent in London is Mr. ALFRED LONGSDON, and in New York, the agents are Messrs, THOMAS PROSSER & SON.

In an out-of-the-way place in one of the side avenues of the western annexe was stowed away one of the most valuable, complete, and interesting groups of objects contained in the Great International Exhibition of 1862—we allude to the remarkable display of steel exhibited by Krupp. The works whence this beautiful collection came are situated at Essen, in Prussia; they are not of recent origin, having been celebrated for half a century; but it is only recently that the great stride has been made which causes them to outstrip all competitors in this branch of manufacture. The business carried on in them is now immense, nearly three thousand men being constantly employed there, and the produce of the establishment finds its way to every part of the world. The machinery of the Essen Works is on a scale of magnitude surpassing anything of the kind in this country. Their great steam-hammer strikes with a force of fifty tons; the anvil for this gigantic hammer to work upon, rests on castings weighing three million pounds; and ingots of steel are produced weighing thirty tons.

Among the most important of the different objects exhibited by Messrs. Krupps was a cylindrical ingot of cast steel in the simple cast state, without any forging or workmanship upon it; the weight of it was 20 tons, its diameter being 44in., and its length 8ft. This ingot was broken in the middle in the cold state, after having been cut in on each side by a saw, under the largest hammer in the works, the falling weight of which is 50 tons. The two fractures thus produced are for the purpose of demonstrating that the manufacture of even the largest pieces is perfect, and that the ingots in the rough state are quite free from honeycombs, or faults, and that the purpose of hammering is not, as generally supposed, to condense or weld such imperfections, the existence of which would be a serious defect.

A square ingot of cast steel was also exhibited, one-half of which was in the normal cast state, the other half forged. This piece was broken longitudinally, and was for the purpose of showing the fine grain, soundness, and toughness of the steel as well in the cast state, and also the increasing of these qualities by forging. This quality of steel, as well as that of No. 1, was the softest and toughest produced in these works, and was specially used for the manufacture of guns; its weight was about 4 tons. A forged ingot of cast steel, 15 tons in weight, 30in. wide, and 17in. thick, was broken in four pieces, for the purpose of exemplifying the influence of forging, also the compactness and homogeneity of the material from end to end. There was a piece of forged cast steel 17in. wide, and 9in. thick, with fracture at both ends, bent in the middle in the warm state under the hammer, so that the opposite sides were close together, and, notwithstanding the strain on the outside of the bend, there was no indication of the slightest cracks.

Two pieces of cast steel were exhibited that were exceedingly interesting, for they represented the manner of manufacturing one of the most important products of these works—viz., cast-steel railway-tyres without a weld. Upwards of 40,000 of these tyres have been supplied from these works, and, while running in all climates, have given perfect satisfaction. These tyres could also be seen on several engines that were exhibited in the western annexe. The engine that was exhibited by the southern division of the London and North-Western Railway, Mr. M'Connell, was fitted with cast-steel tyres and crank-axle from these works; also the engines exhibited from Austria, Saxony, and elsewhere.

Among a great variety of axles were two of cast steel, with cast steel wheels and tyres complete, for running on railways. One was polished over the whole surface, showing the purity of the metal. This class of wheel offers perfect security against breakage. Relative cheapness and lightness of weight distinguish these sets of wheels as compared with other wheels. The disc, nave, and rim, are rolled from one piece; their weight is about 1550lb. A separate disc-wheel was also exhibited, the whole surface of which is turned and polished, and the wheel has been bent in two directions to show the perfect solidity of the material and construction.

To show the actual effect of the wear of the tyres a set was exhibited belonging to the Great Eastern Railway Company taken from No. 255 engine to show the condition of the tyres after having run 66,179½ miles without being turned. The weight of the engine to which the wheels are attached is 28 tons, and the weight on the wheels exhibited 10 tons. The engine commenced running on Oct, 12, 1859, and ran up to March 24, 1862. There was also a locomotive trailing-axle, with wrought-iron wheels fitted with cast-steel tyres, from the North London Railway Company, being taken from under No. 40 engine after having run upwards of 77,000 miles without being turned. These tyres commenced running July 31, 1860, and were taken from under the engine in April, 1862, to be sent to the exhibition. Diameter of wheels, 3ft. 6in.; weight upon them, 8½ tons. Another object of interest was a cast-steel axle with steel disc-wheel and tyres adapted for street tramways.

For marine purposes there was a double-crank propeller-shaft for a Transatlantic screw-steamer of the North German Lloyd in Bremen, weight 11 tons, length 24ft., diameter 15in. This shaft was not quite finished, but showed the forged as well as the finished workmanship. Also, a specimen of a heavy cast steel forging suitable for the intermediate shaft of a large steamer, the web of the crank not yet cut out. This piece was forged under the hammer of 50 tons weight; the shaft is 15½ tons weight, and was forged from an ingot weighing 25 tons. Also a small crank shaft, weighing two tons, belonging to the Danube Steam-ship Company. Grouped with these was the spur of a ship's anchor upon Trotman's principles, weight 1140lb., along with a screw-propeller, of 9ft. diameter, of cast steel. By making these screws of this metal, security against breakage is offered, as well as an advantage of their being made much thinner.

Among the miscellaneous objects were a pair of mint-rollers 8in. long and 8in. in diameter, one pair of rolls 16in. long and 10in. in diameter, and one pair of lace-rolls; these are all hardened and highly polished. Hardened cast-steel rolls have been made at these works for forty years; thousands of them are distributed throughout the world.

Amongst the artillery, two guns were exhibited in the finished state, which had been split up longitudinally on one side and then fractured in order to illustrate the perfect homogeneity of the metal; there were also five cylinders of cast steel, bored and rifled with different classes of grooves to demonstrate that any kind of rifling can be executed at these works; also a number of roughly-forged and ready-bored, turned and polished, barrels for small arms. In former times these works only produced solid-forged barrels, they are now able to execute bored barrels on a large scale, specially for military purposes.

Of tool steel there were different kinds—square, round, and flat—with sections showing the fractures. For all classes of tools, dies and punches for mints, the cast steel is produced in forged rods of any required dimensions and quality. Although these works are much engaged in the production of steel forgings in large masses, still the manufacture of tool steel and other classes of steel is not neglected, but every endeavour is made to supply steel of the highest perfection.

Report of the Commissioner of Pensions.

The following is an abstract from the Report of Joseph H. Barrett, Esq., Commissioner of Pensions, to the Department of the Interior:

The number of pensioners of every class in the loyal States on the 30th June, 1862, was 8,159, requiring the sum of $752,711.71 to pay their pensions. The amount actually paid the past year, including expenses of agencies and arrears of pensions, was $782,161.41.

It is ascertained, from the latest information, that there were 2,073 pensioners in the disloyal States, whose pensions amounted to $168,-364.98. The entire amount of pensions paid in those States, in 1861, accounted for, was $8,223.35.

At the close of the last fiscal year there remained in the hands of pension agents in the disloyal States, $23,627.56. Of this sum, $15,535.29 have been properly accounted for at different points taken and held by the Federal forces, at which pension agencies were located.

An examination of the statistics furnished by the records of the Pension Office shows a decrease in the number of pensioners, since 1861, of 477. The aggregate payments in that year to pensioners was $1,072,461.55. For the present year the amount due to pensioners is $790,384.76, being $282,077.79 less than was paid the previous year.

The number of bounty land warrants issued in 1861, was 5,341, granting 834,720 acres. For the present year but 1,636 warrants were issued, granting 257,860 acres, being a decrease of 3,705 warrants, and 576,860 acres of land.

Since the adoption of the Constitution there have been granted for naval and military services 65,801,862 acres of the public domain, which, if estimated at $1.25 per acre, amounts to $82,257,327.50; and the aggregate amount of money expended by the Government in the payment of army and navy pensions, since its organization, is ascertained to be $90,668,-521.06.

The general pension act passed by Congress at its last session, and approved on the 14th July, 1862, has largely increased the business of the Pension Office, and will add materially to the expenditures on behalf of the pension list. The law embraces in its terms every branch of the military and naval service of the United States since the 4th March, 1861, and humanely provides for two classes of pensioners hitherto not recognized, viz: mothers and sisters, dependent for support upon officers or soldiers, and the pensions to disabled seamen, and to widows and minor children of persons in both army and navy, are increased.

The Commissioner states that "these facts, in addition to the consideration of the great numbers now employed in the army and navy, have led to apprehensions, in some quarters, of an extravagant, if not insupportable, annual burden resulting from this law, in itself certainly no more liberal than simple justice demands towards the armed defenders of the country in this day of trial. From a careful examination of the data upon which estimates may be based, it is my conviction—always supposing the results of the war to be commensurate with what may reasonably be expected from the means employed—that the total annual sum required to carry out this law will in no year exceed $7,000,000."

The number of applications for army invalid pensions under this act was, to November 15, 4 411. The number of applications of widows (army) under this law to the same date was 5,161; of mothers, 901; of minor children, 20; and of sisters, 10

FOREIGN COMMERCE OF NEW YORK.

Value of Exports and Imports and Revenue from Customs at New York, in November, for five years:

Years.	Exports.	Imports.	Customs Rev.
1858	$4,337,600	$10,591,500	$1,806,500
1859	10,523,500	14,395,000	2,157,200
1860	12,262,200	15,421,200	1,794,700

Add entered for consumption	4,195,828	2,161,478	3,017,956
Total entered at port	$5,797,556	$2,506,926	$3,710,356

In the navy branch there were filed previous to November 15, 163 applicants for invalid pensions, 115 for widows, 20 for mothers, and 3 in behalf of minor children. Making the total number of applications growing out of the present war 10,804.

The eighth section of the pension act of July 14, 1862, made it the duty of the Commissioner of Pensions to designate physicians and surgeons to make biennial examinations of pensioners, as required by the act of March 3, 1859, and also to examine applicants for invalid pensions under the late act. In the performance of this duty the Commissioner has selected persons in the various States with reference to their professional skill and integrity of character. It is believed that the benefits designed by this provision of the law will be fully realized, and the greatly augmented labors imposed upon the Pension bureau will be performed with little difficulty if the zealous co-operation of these officers is obtained.

The act of July 14, authorizing the appointment of a special agent of the Pension Office to assist in the detection of frauds against the pension laws, omitted to make appropriation to defray the expenses incident to the service required by the law, and I have therefore submitted an estimate of the amount that will be necessary for that purpose.

The Commissioner alludes to "certain impressions which have prevailed in some quarters" of the existence of obstacles in the way of the ready transaction of business in the prosecution of just claims for pensions; and that officer clearly explains, for the information of all parties, the forms prescribed for the convenience of applicants under the various pension laws, and shows that any one of ordinary intelligence can, by following the instructions of the Bureau, secure the admission of his claim without difficulty.

Considerable difficulty has been experienced in prescribing a mode of authenticating pension claims which shall be sufficiently liberal to claimants, and at the same time protect the Government against frauds.

To require all applications to be authenticated before a court of record, causes much trouble, and in many cases in reasonable expense to the applicants. If the authentication before any person authorized to administer oaths shall be admitted as sufficient, experience has demonstrated that the Government is exposed to gross frauds. Large sums have been obtained from the treasury upon fraudulent certificates of justices of the peace and notaries.

To remedy these evils, it is recommended that the Department be authorized to appoint Pension Commissioners, who shall be authorized to receive applications, administer the necessary oaths, and certify the papers to the Pension Office, under proper regulations. The Commissioners should receive from the applicants reasonable fees for their services, and the pension certificates should be forwarded to them to be delivered to the pensioners. A Commissioner may be appointed in each county where it is probable any applicants for pension reside.

The adoption of a system like this would protect applicants for pension from the unjust charges which, in many cases, are now made by agents and attorneys.

The New Jersey Railroad and Transportation Company are endeavoring to obtain the privilege of extending their line to Philadelphia, via the New Brunswick and Milstone Railroad to Delaware River.

The Tax on Dividends.

Commissioner Boutwell, of the Internal Revenue Department, has decided as follows in reference to the Three per cent. Tax to be levied on the dividends of Banks, Insurance Companies, *and other Corporations:*

OFFICE OF MERCHANTS' INSURANCE COMPANY, NEW YORK, Dec. 10, 1862.

Hon. GEO. BOUTWELL, Commissioner of Internal Revenue, Washington, D. C.:—

DEAR SIR—According to section 82 of the Excise law, can banks, insurance companies and other corporations pay their dividends in full to stockholders, and in addition thereto pay the United States government the sum of three per cent tax, or must the tax be deducted (of three per cent) from the payment of dividend to each individual stockholder, and the three per cent paid to the government as the tax on such dividend? Your early answer will oblige. Yours, respectfully.

J. L. DOUGLASS, Secretary.

TREASURY DEPARTMENT, OFFICE OF INTERNAL REVENUE, Dec. 12, 1862.

SIR—Your letter of the 10th instant is at hand concerning the payment of dividends in full to stockholders. The company must bear in mind that the amount paid stockholders is 97-100 of the sum upon which the three per cent must be levied in order that the government may have its just proportions. Very Respectfully,

GEO. S. BOUTWELL, Commissioner.

J. L. DOUGLASS, Merchants' Insurance Company, New York.

Report of the Patent Office.

During the year, from Oct. 1, 1861, to Sept. 30, 1862, 5,302 applications for patents were made, and 3,522 were granted. The balance in the Treasury to the credit of the patent fund on the 1st of October, 1861, was $16,750 27. From that date till October, 1862, there were received in payment of patent fees $163,405 34; appropriated by Congress, $50,856 49. During the same period there were expended $182,853 89, leaving to the credit of the patent fund, on Oct. 1, 1862, $48,157 21.

Philadelphia and Reading Railroad.

The financial and business year of the Philadelphia and Reading Railroad Company closed on the 30th ult., with a coal business of 2,305,428 tons, against 1,630,322 tons for the previous year, being a difference in favor of the past year of 675,105 tons.

Wheat Trade of the Northwest.

The Receipts of Wheat at Chicago in September, October and November for three years have been as follows:

	1862.	1861.	1860.
September, bush...	1,735,536	2,987,412	3,475,400
October, bush.....	1,937,561	3,665,550	3,531,088
November, bush...	1,291,511	2,042,969	1,136,150
Total.....	4,964,608	8,695,931	8,142,638

It will be seen that the decrease in the supply of Wheat this Fall, as compared with last year, is equal to 43 per cent. But the supply has fallen off in Milwaukee also, as the following table demonstrates:

The Receipts of Wheat at Milwaukee in September, October and November for two years have been:

	1862.	1861.
September.....	1,723,442	2,012,890
October	2,358,681	3,024,795
November	1,358,282	2,086,401
Total.....	5,440,405	7,074,086

From the above it will be seen that there is a decrease in the supply, during the three months named, of 1,633,681 bushels, equal to 23 per cent. Taking the receipts at Chicago and Milwaukee together, they present the following:

The Total Receipts at Chicago and Milwaukee in September, October and November were:

Chicago.....	4,964,608	8,695,931
Milwaukee.....	5,440,405	7,074,086
Total.....	10,405,013	15,770,017

Thus it will be seen that at the two great Wheat receiving points in the Northwest, there is a falling off, as compared with 1861, of 5,365,040 bushels, equal to 34 per cent. The truth is, the Wheat crop of 1862 was a partial failure, both as regards quantity and quality. Especially is this true of Spring Wheat in the central and northern portions of Illinois and Iowa, and in the southern part of Wisconsin. Numerous fields in these States were entirely destroyed by the bug, and owing to the late and rainy Spring, the yield in many counties did not average five bushels to the acre. The last call for volunteers also was issued just about harvest time, and many poor fields of Wheat were left uncut for want of hands to harvest them. The question, how much Wheat is there yet in the country to come forward?—is one that can only be answered by comparisons with the receipts of former years. For this purpose we append the following table, showing the receipts at Chicago for a series of years—dating them all from September till September, except 1859 and 1860, when the old crops were exhausted and the new crops ready for delivery by the 1st of August. Alongside this we give a column of figures showing the amount of each crop marketed here by the 1st of December of each year:

Receipts of last Eight Wheat Crops at Chicago.

Crop of—	Receipts of entire crop.	Marketed by Dec. 1.
1854.....	2,283,921	958,475
1855.....	8,518,997	5,055,422
1856.....	8,842,858	5,121,998
1857.....	13,863,074	6,844,387
1858.....	4,238,879	2,632,156
1859.....	8,876,794	6,247,471
1860.....	20,231,548	11,632,421
1861.....	16,864,384	8,605,931
1862.....		4,964,608

The New National Loan.

U. S. FIVE-TWENTY BONDS.

THE interest on these Bonds is at the rate of Six per cent. per annum, and is payable 1st of May and November, in GOLD. They are called "FIVE-TWENTIES," because redeemable at the option of the Government after five or within twenty years.

The Coupon Bonds are issued in denominations of $50, $100, $500, $1,000, and the Registered Bonds in denominations of $50, $100, $500, $1,000, $5,000 and $10,000.

To facilitate investment in these Bonds, and make them more accessible to the public, we have made arrangements to keep on hand a constant supply of all denominations for sale, at the same rate at which they are issued by the Government, viz: PAR; INTEREST TO COMMENCE FROM THE DATE OF PURCHASE.

We are thus enabled to save parties all trouble and delay in funding Legal Tender Notes, or otherwise investing in these Bonds.

Orders or enquiries by mail will receive prompt attention, and the Bonds will be sent to any address by mail or express as desired. Payment may be made in Current Bank Notes, Drafts on City Banks, or U. S. Legal Tender Notes.

These Bonds are the CHEAPEST GOVERNMENT SECURITY NOW IN THE MARKET, and pay the LARGEST INTEREST on their cost.

They are destined to become the BEST KNOWN, MOST POPULAR, and MOST AVAILABLE, of all the Bonds of the Government.

The operation of the National Tax Law, which it is now certain will produce double the income originally anticipated, will make the issues of the United States Government the safest and most desirable investment in the world. They are in reality a First Mortgage upon everything in the country, as no Railroad or Corporation of any kind can pay a dividend, or the interest on its own issues, until it has contributed out of its gross income, through the operation of the Tax Law, to the support of the National Credit.

These are the Bonds upon which the Government now relies, THROUGH THE CONFIDENCE AND PATRIOTISM OF THE PEOPLE, for continued financial support.

We keep them for sale to encourage investment in them, and to aid the Government, by promoting their rapid absorption; and the money invested in them through us, contributes to the direct and immediate support of the National Treasury.

Banks, Bankers and Brokers, receiving orders for the funding of Legal Tender Notes, or the purchase of these Bonds, can obtain them at our counter without trouble or delay.

VERMILYE & CO.,
No. 44 WALL ST., NEW YORK.

HAVE on hand for immediate delivery, the NEW TWENTY-YEAR SIX PER CENT. BONDS of the United States, designated as "Five-Twenties," redeemable at the pleasure of the Government after five years, and authorized by Act of Congress, approved February 25, 1862.

The Coupon Bonds are issued in sums of

$50, $100, $500 and $1,000.

The Registered Bonds in sums of

$50, $100, $500, $1,000 and $5,000.

Interest will commence from date of subscription, and is payable in Gold at the Mint or any Sub-Treasury or Depository of the United States on the first days of May and November of each year. At the present premium on Gold, the Bonds yield about eight per cent. per annum. The ample provision made by Custom Duties, Excise Stamps and Internal Revenue for the payment of Interest and liquidation of the Principal, makes an investment in this loan safe, profitable, and available at all times.

This being the permanent Loan into which the Legal Tender Notes are convertible, it will become the principal Loan in the market, and a profitable mode of investment for Trust Funds, the surplus funds of capitalists, as well as the earnings of the industrial classes.

Subscriptions received at par in Legal Tender Notes or notes and checks of Banks at par in New York. Subscribers by mail will receive prompt attention, and every facility and explanation will be afforded on application at this office. 3m45

SANFORD'S
MAMMOTH
OR
GLOBE
HEATERS.

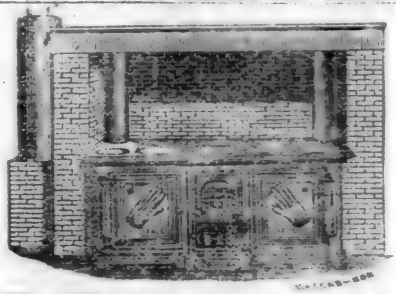
The best stoves for RAILROAD DEPOTS and SHOPS, and all places where a great heat is required. They are very durable, and very economical of coal.

Beware of imitations that are inferior in strength and in other respects.

TESTIMONIALS.

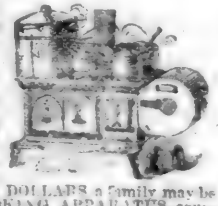
HUDSON RIVER RAILROAD OFFICE, N. Y.
This Company have now in use, over two hundred of Sanford's Mammoth Heaters, in Station Houses, Work Shops, and Engine Houses; we commenced using them in 1853, and some of the first stoves put up are still good and in use. We consider them the best Heaters now in use.
J. M. HEBARD, Supply Agent.

UNION FERRY COMPANY.
The Mammoth Heaters have been used by this Company in their waiting rooms at the several ferries and found to be very excellent stoves and more durable and valuable than any heretofore used. CYRUS P. SMITH, Managing Director.



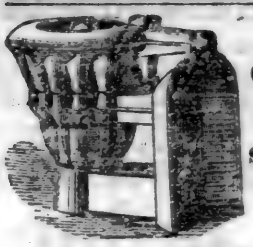
MANUFACTURED AND SOLD BY
SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water street, New York.

The COSMOPOLITE
PARLOR RADIATOR, &
GAS BURNER,



Introduced one year ago, already ranks as the **LEADING STOVE** for PARLORS, SITTING ROOMS, and all places where a soft, pleasant heat is desired.
Fire may be kept all winter with an astonishingly small supply of coal.
Send for description and testimonials.

SANFORD, TRUSLOW & CO.,
Nos. 239 and 241 Water st., N. Y.



Challenge Air-tight KITCHEN RANGES,
May be placed in a fire-place without masonry, and with or without water-back; or may be set out on feet, as an ordinary stove.
This range, already very popular, has the **LARGEST OVEN** of any in the market; BAKES PERFECTLY, never burning to brown at the bottom; BOILS, ROASTS and BROILS with unequalled facility and dispatch, and with extraordinary **ECONOMY OF FUEL**, which may be either coal or wood. Flues large and easily cleaned. A child can manage it, so simple is its construction. Castings extra heavy, and design plain and chaste.
Four sizes, adapted to families and hotels.

Beacon Light
SUMMER AND WINTER
PORTABLE RANGE,

is a very popular range, having six boiler holes, one large oven that bakes perfectly, with an arrangement for roasting, or heating irons at the end. It is very economic... Fuel. For a FEW DOLLARS a family may be supplied with PERFECT COOKING APPARATUS, equal to the highest price stove in the market.
Three sizes, adapted to coal or wood.

SANFORD, TRUSLOW & CO.,
239 and 241 Water st., N. Y.
